BTW, that Collins 250Hz filter is xtal and not mechanical. The shape factor and ultimate rejection is poor as you reported; and also had circuit leakage problems. The "best" rcvr I ever had here was a highly modified 75A4 with 7360 mixers, 6GM6 RF, SS Hang AGC and cascaded mechanical filters. On CW a 2.1KHz filter was first in line to set the ultimate skirts and followed by the 800Hz. I "built" this gem while working at National Radio in the 60's and sold it in 1992. I have been trying to buy it back since!!

I suspect this may have less to do with poor skirt selectivity and a more to do with signal leakage around the filter.

The Drake R4C with 250 Hz filter does this also (unless you have the 300 Hz Sherwood filter in the 1st IF). You can hear a pretty wide swath of signals either side of center (very weak), but the signal "on center" pops way up into prominence. The leakage actually provides a bit of useful function, in that even though there is no significant interference disturbing the ability to copy the "on center" signal, you get a sound picture of activity either side of center. I'm told that many Drake-sters found this characteristic quite useful during contest ops.

Earlier Collins receivers - the 75A4, specifically - also suffer some from filter blow-by.

Subject: Question Re: Icom 7100 VS Icom 8500

In article <857753870.7512@dejanews.com>, <lenmc@direct.ca> wrote:

>I'm deciding to buy and Icom Radio. Could anyone explain
>the differences between the 7100 and the new 8500.

The R8500 has much wider freq coverage -- down to 100 kHz.
The R8500 I tested has better sensitivity above 1,000 MHz, though
it receives images there. I measured the 12 dB SINAD sensitivity
using the EIA RS204-A standard procedure and plotted it to 2,000 MHz.
The graph appears in my MT review.

Both receivers have different memory bank arrangements:
The R7100A has fixed banks of 100 channels each, and the R8500 has
user adjustable bank sizes. Each memory channel in the R7100 can
have what I call a "sub-bank" number associated with it (0-9).

The R8500 scans and searches much faster than the R7100A.
The R8500 supports programmable alpha labels for the memory channels
and banks. It has more tuning step sizes, including a handy
programmable step size.

The R7100 has a CI-V computer interface jack, but the
R8500 has both a real DB25 RS232 and CI-V computer interface jacks.
The R8100 has a jack on the back which taps into the AGC or
baseband audio, depending on the setting of an internal jumper.

The R8500's audio peak filter has 2 bandwidths and adjustable
center frequency. I use it as a "tone control" on FM.

Physically, the R8500 is built much better, using a massively
cast metal chassis with internal partitions. It has better
shielding and is much heavier. The robust construction may account
for most of the price difference.

The R8500 is much larger than the R7100 and the front panel
controls are easier to operate since they are bigger and further apart.
The R8500 keypad employs soft rubber keys versus the hard plastic
R7100 keys. The smaller R7100 is handier for placing
on a car seat and driving around while looking for noisy
power line insulators, etc.

These are just some of the differences. See my R8500 review in
January 1997 Monitoring Times magazine for quantitative test results.

I sold my ICOM R7100A after buying an R8500 but both
are great receivers. I would have kept both if I didn't
have to work for a living :-)

Subject: Using Two Power Supplies

Connecting two large supplies in parallel can be a very unstable
condition. It can cause oscillation and burn out of one or both
supplies.

If the supplies are stable in this hookup then because
The regulation voltages are slightly different, one
supply will hog the current. As that supply load increases the
voltage should drop slightly and the second supply may pick up
some of the load. The degree of this effect depends on the load
regulation capability of the supplies and how close the voltage
settings are.

If the supplies are just basic transformer rectifier setups then you
probably can share.

If you isolate the two supplies with series diodes to the loads
you can experiment safely. My concern is that precision electronic
regulators may not be able to stand the direct parallel connection.
If the supplies automaticaly current limit on excess current by allowing
the voltage to drop without folding back to very low voltage, you

may be able to share.

Aproach this with caution, I have not seen the schematics of the supplies you are interested in.

My point here is that it can be an expensive bad idea, but it may work under specific circumstances. Be very careful.

Hi...I used to ride motorbikes quite a bit. I found the best headset was the intercom/cb mic setup that Honda uses. I have a friend that worked at a bike shop and he had lots of extra mics from warranteed sets. At first I wired a ptt to the handlebar and the mic and helmet speakers to the radio. Worked great. Then I sold my bike (Suzuki 1000 GL) and bought a Yamaha Venture Royale. I took a Kenwood TM201A and mounted it in the trunk. I used the Yamaha sound system/intercom and wired into it. It was great! I could have vox intercom w/passenger (wife) that muted the broadcast radio when talking. When the 2m radio broke squelch it also muted the broadcast radio. I mounted the same ptt on the handlebar as the previous bike had. I had to use a 1/2 wave antenna. I had many reports @70+ mph that said it was like I was at a base station! No road/wind noise at all. I have since sold my bike. I did save one of the mics though just in case I decide to get back into bikes. My new toy is a '91 red/red Vette. Lots of fun. I had to do some thinking on how to do a clean install on it. I found just the ticket. Hope you get things working good for you....ttfn

For a radio with such old technology, it sure works well. Took it to DU
last month and had excellent results with it.

From: kb2rmi@node6.frontiernet.net (robbin decker)
Subject: Kenwood TS520: good first rig?

In the $400 range with some careful looking you would be able to find
a substantially more modern radio, there are Icom 720a's, TenTec
Omni's, and Kenwood 120-130-180 and even 430's and 140's that show up
in the 350-500 range pretty regularly. These are solid state, some are
general coverage, and don't require a lot of tuning and loading when
you change bands, etc. The 520 is a tough old rig, but should be 2-250
unless it is a complete station and is an S or SE model. I suggest a
bit more shopping and research, you won't regret it.

Subject: NEW YAESU FT-900 Plus !!!!

Ok here it is. I have two confirmations on the updated FT-900 radio !
Basically the radio will be similar to the Ft-900 except the radio will
cover 6 meters,2 meters, and 440 mhz in addition to HF. The radio will
have separete coax connections for HF and 6/ 2 meters / 440 mhz.
Basically, Yaesu will add permanent
modules inside the Ft-900 body. Also, the remote head will be able to
control "ALL" functions of the radio! The receiver performance on all
the bands is supposed to be far superior to the IC-706 Mark II.
I feel that after I ger two similar confirmations from credible

sources it is time to post. I was told that Yaesu will not come out with
a small (icom 706) type radio. I was told the radio will abe available
by August 1997 !!!!I am not sure if the Tuner will still be included in
the New Radio. It is hard to belive that they could pack all that stuff
into a small box. HEY, ICOM DID it!

Hi, I have a ICOM 20L power amp for the IC202/202S series that I would like to swap for a 50L for the 502 series. Anyone have an extra 50L to trade or one to sell??

I might sell the 20L and PS3 speaker /power supply or trade for other VHF/UHF SSB gear.

73,
Tim

6336. WTT: 32 ch UHF Maxtrac for Amateur UHF Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>

Hi, I am looking for CLEAN, cosmetically fine KLM VHF and HF
transceivers:

KLM 661 6M xcvr

KLM Force 5 HF xcvr

KLM Echo series (2M and 432)

If you have a unit, please contact me.
Thanks and 73,
Tim

6338. Re: ft-50r w/ icom FAS-2/70A antenna?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <5ft7ur$rr0@mtinsc03.worldnet.att.net>
Source record: 180954

I have one on my FT50. It seems to work about the same as the factory antenna on both VHF and UHF. Limited testing on 800 shows a slightly less favorable result than the favctory. Interesting thing though, if you transmit on UHF at 5 watts into the Icom for very long, it actually gets pretty warm, kinda like a dummy load, hummm!

Tom

6339. Multiband Ant. IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: "Dan C. Cui" <dcui@nh.ultranet.com>
Message-ID: <01bc2c34$454c96a0$22b8b4cf@dan>
Source record: 180955

Have an IC-706 and need an antenna???
I took a Comet CA-HV antenna which will operate 2M,6M and 2 HF bands...and put two additional coils on it for a total of 10,15,20,40,2 & 6M, all at the same time without tap changes or coil changes....works get, making lots of contacts in the car... Give it a try...antenna cost around $150...sure beats paying over $300 for one.

Hey all...
I've been interested in ham radio for awhile but I've never had the money. Now that I'm financially able to get into hamming I need advice on equipment. I was wondering what I would need to start out. I've looked around for some sort of starter kits or starter suggestions but I've come up dry. I would appreciate any help on the necessities and better companies/models. Thanks.

It's not just a chip, but more like a kit.

You get one EPROM plus another PCB that has the UART plus other supporting logics. You will have to put both of them into your 940. After that, you will also need the 232 interface (external to 940) that is required for any Kenwood rig.

Kenwood made a batch of these IF-10B earlier and if you really want it, you should call up Kenwood ASAP and see if they still have it available.

Good luck & 73,
N6YD

I'l be in HK for business next week and was wondering about picking up some new gear -- Yaesu's FT-50R dual-band h/h is top of the list! :>

Has anyone here bought gear in HK? Are the prices that much cheaper than at home (for me, home = Australia)? What shops can you recommend, which should I avoid?

In short, are there any HK-savvy amateurs to help a first-timer from getting burnt?

Thanks,

df

(ps. sorry for the cross-post but I wanted to make sure I got a good spread of fellow amateurs who may have 'been there, done that').

2 meter kenwood TM-231A in great condition, with mic. This
is a great mobile rig or desktop as i have used it, I dont have
any mounts for your car with this unit. It does come with the
manual, asking $125...you pay postage.

The other item is a Astron 20-amp pw supply, in great condition.
This is priced to see because you pay postage and it is heavy!!!,
asking $30.....,

For replacement capacitors for the old set's, try the following.

Grandpa's Radio Shop
26 Queenston Cresent
Kitchener, Ontario
N2B 2V5

attn. Mr. George Found
(519)576-2570

They have been in business for quite some time, and specialize
in the older radio. They even re-cone the old speakers still.
Something every Radio Shop did a long time ago. They also have
a schematic service.

Though I like the new Yeasu 8000 & 8500, all my friends have had to send their Yewasu's back to be fixed! After hearing about the new TM-v7, needing a mkII version, the price of the old TM-733a in closeout is too good a deal.! Please email me if you know a dealer with one left at the closeout price!

I spent a fortnight in HK last December.

I found a few shops selling amateur gear. The prices were generally
higher than in the US. Apparently most of the shops expect you to
dicker on the price and start out high, but the IC-2000H I looked
at listed at 400,000 HKD - about $520 US. I said "that sells for
about 225,000 HKD in Los Angeles" and he couldn't even come close,
much less offer an attractive deal.

From: trouts1@aol.com
Message-ID: <19970309180400.NAA28045@ladder01.news.aol.com>
Source record: 180990

T368 owners,
I have found that some T368 owners have common problems that would seem to be in all rigs. As it turns out other owners do not have the same
problems. A few examples are problems with the vaccum relay for T/R switching on E and F models. Another is a sharp point near the final tank coil which causes arcing which is cured with filing.
I have receintly found out that there were several (if not more) manufactures
of the T3. The problems may be due to design or specification latitude where
manufactures introduces differences or the design may have changed slightly
from order to order. I decided to track some T368's with their order numbers
to see if anything common shows up as common. So I am requesting T3 owners to send me their TYPE, SR #, ORDER # and MANUF. to see what the contract span was and how SR #'s were issued. If you have time please
include what you may have problems with or any other information you may know.
So far I have only been able to locate informaiton about the T3 A,B and C
models. Fair included one E schematic in the A,B and C package they sell.
I would like to purchase manuals for the other models if anyone has them.
I have been told that the Gov't has not released the manuals past the C model.
It may be that there was not manual for the E and F. Thay may have been covered by addendiums or bullitans? If anyone has any information please let me know.
Please send any infomation you have to me at:
trouts1@aol.com and CC
davidk@artax.webo.dg.com
If there is enough enformation to be interesting I will see if ER is interested in
posting it. I will keep a list of people who respond and will send you the
compilation as it develops.

Source record: 180994

I'm looking to purchase either the Alinco DX-70th or
the Icom IC-706 in the next week or so and am looking for advise as to
which is the better purchase. I'm looking for a radio which is
portable and will be use primarily on HF with some use on 6 meters,
while the 2 meters included in the Icom is nice it's not a big selling
point to me. I'd like to know what other owners and or operators of
these two rigs think of them and how they compare on the HF bands with
other HF only portables like the Yaesu -Ft- 900 or the Kenwood TS-50 .
Any comments or hekp in making 5this decision will be greatly
appreciated.
Thanks,
John/ KC1TV

I'm another ham wanna-be shopping for my first HF rig. I just attended a swap meet here in the Seattle are (Puyallup) and saw a couple of 520s for around $400. However, a ham friend of mine connected me to another guy who knows of one for $225, with a CW filter, mauals, etc.

My suggestion is that you try to network with some ham friends and put out some feelers. You can probably get a good rig for a lot less cash that way. If you don't know of any friends that are hams, try looking up their names in one of the callsign search engines on the Web. You may be surprised to find out that some people you know are indeed hams. You can also search by geographical location to find hams in your neighborhood, then just go knock on their door. Hams are usually a friendly lot, and maybe one old-timer has a back-up rig he'll (or she'll) sell you cheap.

Of course, you could connect with people in a local ham radio club. They usually offer classes to help people get their licenses and those instructors can help you to get your rig.

Hope this helps some.
-Jay

All you have to do is order the xtals for teh frequency you want (taking for granted that the HT90 is VHF) retune the Xmiter and Receiver for teh new xtals and you are set to go.

Bill,
So the IC-756, is that radio just an IC-751 with
an add on LCD sreen and a DSP unit. THe IC-751 was
built over 10 years ago.

Any comments, how come they didn't put a power
supply in the 756, guess they had to make room
in the 751 modified = 756 to add the DSP/LCD
display drivers.

6384. Re:Phase Noise Tests

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-09 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970308.194247.9871.11.km1h@juno.com>
Source record: 181045

While Rick, K2XT, made tests that I feel are quite meaningful, it is not fair to compare an IC736 against the FT1000MP; they are not even in the same league. With that minor bitch behind me, I enjoyed the rest of the message.
I too, have run tests on many rcvrs over the years, starting with a 75A4, under full HP equipped lab conditions, but always turn to reality for the final test. Hook up a big antenna and find a contest or pileup. Phase noise is only part of the equation in seperating a great RX from the rest of the pack. There is not ANY lab test that can equal a 160M CW contest for example. I pick 160M based on experience.....a rcvr that holds up well on 20M or even 40M can still fall apart when surrounded by the absolute S Meter against the pin signals on 160M. Second and Third order IMD are the crucial requirements here. I found that problem with an early TS-870 that was loaned by Kenwood for the 1995 CQWW contest.

Rick, I hope you get a chance to compare that MP against other high performance radios such as the FT-1000D, IC-775, TS-870, Omni -6, IC-781 and ??? I no longer have access to that half million dollar lab and the latest rig I tested was a modified TS-940.

BTW, that Collins 250Hz filter is xtal and not mechanical. The shape factor and ultimate rejection is poor as you reported; and also had circuit leakage problems. The "best" rcvr I ever had here was a highly modified 75A4 with 7360 mixers, 6GM6 RF, SS Hang AGC and cascaded mechanical filters. On CW a 2.1KHz filter was first in line to set the ultimate skirts and followed by the 800Hz. I "built" this gem while working at National Radio in the 60's and sold it in 1992. I have been trying to buy it back since!!

Well, Bill, I'm surprised you haven't received any responses to your query.

I have an 870S, and it is everything I'd hoped it would be. The IF DSP works superbly, and the built-in keyer is marvelous. Without question it has the finest SSB and AM sound on receive I've ever heard.

The only significant flaw I've found in my first year of ownership is that the QSK is not entirely silent. Unless some myserious malady develops, I'm entirely satisfied with mine.

Alinco has now admitted that the Alinco DX-71 is coming to Europe shortly! A month ago they told me I was imagining this radio in my head! Do you guys really believe this model is for the European Market only? Do you think Alinco spent $$$$$ to market only in Europe? I think not! Yaesu denied the existance of the Yaesu Ft-920 until recently.And they replied that the radio was only going to be in the European market with no plans to replace the Ft-990. Looks like they changed their agenda. From what I hear the Alinco Dx-71 is a base style radio similar to the Yaesu Ft-890 in styling but with 6 meters included. I t will have a wealth of "goodies" loaded as standard (Alinco concept). You guys should keep an eye out on the British Ham Radio Newsgroups and the British Newsgroups for more info.
Do Not call the USA Ham stores as they have no knowledge about this radio and you will be wasting their time. The Dealers asked me to include that line in all my future postings of new radios. I am usually correct but they cannot talk about new radios until they are FCC TYPE accepted.
I will keep all informed ,73's Steven Hershman NS1R

Message-ID: <858053953.21229@dejanews.com>
Source record: 180755

Recently I purchased a Kenwood TM V7A. I easily made the OOB mod to extend the tX freq. range.

I am more problems using the radio than I did with the 79A HT from Kenwood.

Among the difficulty is removing a single memory channel as per instructions page 31.

I notice a number of undocumented (or at least not yet found in the docs by me) ways to use the remote mic's keypad.

Has anyone else experienced my difficulty, or other difficulties or have a list of the added features?

Thanks,

Dave WB6AXR

Greetings all,
I've got an Alinco 560T that I'm trying to track down a users manual for. I lost the manual in a move and I'd really like to pick up either a scanned or a text copy of the manual.
I'm also trying to track down a few of the 2 volt batteries for the radio since mine have all died.

Thanks in advance for the information and help. I've got text versions of the manuals for the 580T and the DR-600 if anyone needs them.

The repeater in question must send (encode) the DCS tone. You can not
transmit the tone from your portable and expect the audio section of the
repeater to pass the information. Some repeaters with pass CTCSS tones,
but I've never seen one pass DCS.

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal

checks allowed. When I accept the money order, please include your

home telephone number so I can call and give you a UPS Shipping Code

so you can track it via UPS if so desired. Thanks for all who read this

in advance....

Snide snipes don't answer the question.
How many ham repeaters use CW characters for a roger beep?
That is what it is, a CB roger/over beep. The people seem the same too!
There is no difference between 11 and 2 meter CB. Radio Shack has
cemented that in place. Maybe they ought to make a 2/11 meter dual
band radio with roger "K" beep so you elite operators can feel better.
You still haven'answered his question: not a good example for those
of the "CBers" you want to learn outdated/inefficient CW!

The Kenwood TH-79A also does this, and it is easily modified for public service use, if you have need for it.

This radio ran me $525 in NYC, and has two separate transceivers usable for VHF/UHF, VHF/VHF, and UHF/UHF.

A new version of the same radio means better deal? Or does it mean better resale value? Development improvments? Bug fixes?

Wider RX bandwidth is somewhat useful, but why stops at 200MHz? Why not include an extra band for much batter value?

Slots for 2 optional crystal filters is good. Has the filter price come down at all? Will it create a price war over *optional* filters?

Tone Squelch is now available. A _VERY INNOVATIVE_ idea!! But the UT-86 is optional. Why?

20 Watts on 2 meters. Hmmmm... Twice as much output as the predecessor! Half a unit on the S meter. WOW! High power.

Crossband split? Why wait until the "Mark Up" version?

Bank stacking register to memorize all those mumble jumble settings. Shouldn't it have done in the first place?

Does it mean that all the IC-706 owners are left as it is, or get a chance to upgrade for a *RESONABLE* price? Will we see a flood of IC-706 in the used equipment market?

Finally, if we have "MkII" today, will we have a "MkIII" that includes AF-DSP next year? How about "MkIV" that has an extra band and IF-DSP?

I guess it all depends on how this one sales.

Best 73!

> 73's NS1R Steven Hershman

The dogs bo**ocks you are correct Hershman!

It wasn't difficult to predict that when the FT990 was being sold off
something was on the way. With the IC756 having 6m and DSP, Yaesu had
to come up with something similar!!

No less you said the 708 had 70cm, DSP etc etc. Then 2 days ago on a
private e-mail you said the 708 would be due out next year!! Even
Nostradamous would be jealous of your predictions!

In Britain in our lottery we have Mystic Meg who looks into her
crystal ball and normally gives quality generalisations like; 'the
winner will be an office worker' or ' the winner will have a head'.
What I want to know is are you a relation to this crystal ball toting
wonder women seeing as your info on rigs is as good as her
predictions for lottery winners?!!!

Only jesting,
Gav

I will try to be more accurate in the future. Here is my predictions
which you can hold against me and torture me if I am wrong:
Alinco Dx-71 Radio will be released by Agust 1997 (a base radio).
2) Yaesu Ft-920 Plus, same as a Ft-900 but has 6,2,70cm included.
I believe Yaesu will not come out with a Icom 706 CopyCAT (size).

Finally, If I am wrong I will leave this newsgroup! At least leave using
the same USERNAME! HA HA HA

> Does anyone know if the DSP is in the AGC loop?
>
> John

John,

The dsp is at the end of the IF chain after the AGC (ie. if you put in
the automatic notch filter the s-meter does not drop). This is also
true for the CW peak so I added a 500 HZ filter to mine. However the
slope tuning which is *very* effective on ssb is in front of the agc

Hope this helps,

>the second band.

I'm also a new ham and not too proficient in using my OLR so PMFJI. I
am facing the same decision but before purchasing a new HT I bought
the PRO-51 Scanner to find out what activity there was on the VHF/UHF
bands. I have my scanner set for the 2 meter and 70 cm band and very
rarely pick up any activity on 70 cm. Since all the local activity
seems to be on 2 meters why do I need all the bells and whistles of a
$400 dual-band instead of a 2 meter at $200? Especially since I have
my scanner, which I purchased for $200. There are 209 pages of 2
meter repeaters in the directory compared to 147 pages for 70 cm so it
would not appear to make any difference while traveling. I can see a
dual band for a fixed station with a good antenna, but why is one
needed for an HT? Am I missing something?

6419. Help re 900 mod tm742a

I have sitting before an Advanced Computer Controls RC850. All it will say when I call it is "Four Complete Four, 4:52pm, 1 1". This Controller was lightning struck, then had some chips replaced in it. I think it may be prompting me for some "secret code", like the RC96 does when upgraded from version 4 to version 5. Or perhaps, there are more hardware problems inside to be resolved too. Please Email me or post any info you might have that can help me get this controller back up & running.

Thanks & 73,

6426. Re: ICOM 756, tech specs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5g246n$nr0$1@geraldo.cc.utexas.edu>
Source record: 180825

I'm surprised that the new owners (like myself) are not brave enought
to be more critical about the 756. Yea, Its a great radio...but it's not
perfect. (see my previous postings) We must speak out about the unit's
shortcomings so that we may find answers...and improve the radio.
Sone improvements will come from Icom (???) and most will come from
us. One thing I can say is that once the 756 is modded..it will be a
super radio. I won't stop until mine is perfect. ...

Watch the specs when it is reviewed. They won't meet or beat the 1000mp
or 850sat or 775dsp or 990. Is it still a good radio?...yes it is.

First thing that has to go are the AM filters. The 775dsp offers 6khz..
15/15 and 15/9khz are not usable in most SW situations. I've got a plan
on that one. We also need the general Xmit mod and the secret "power-on"
hold a button-system set-up menu info. The pre-selected filter combinations
are insulting...that needs to be unlocked. We also need a display gain switch...
Full Q-5 signals of S-5 are not visable at all on the display.
Whats that about? It's almost like they had to "deflict" the radio in
several ways so as to keep the 775dsp on top. Otherwise, the radios would
be almost identical.
Anyhow, I'll keep making postings...telling it like it is...and looking
for guys who want to make this the best radio out there.

Source record: 180828

I have been trying to get DCS (digitally coded squelch) to work on a repeater. It works well when I'm simplex (between two Yaesu FT-50R's) but when I tune the two radios to our local repeater, they won't come out of Squelch as they should. I must be making a silly mistake. I can't believe that a feature like DCS won't work on a repeater since I can't immagine that people would need it simplex.

1) Does anyone know if DCS is supposed to work over a repeater?

2) If so, does anyone know any tricks with the FT-50R?

6430. Re: Phase noise tests in receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: res@cmprime.cis.att.com
Message-ID: <5g25pm$5am@anchor.cis.att.com>
Source record: 180829

I have had some interesting e-mail following this report.

I need to mention that I erred in stating that the Collins 250 Hz filter was a mechanical filter, when in fact it is a CRYSTAL filter. The ssb filter is, of course, a mechanical filter.

Although tests of the filters was not an objective of my tests I did notice what I thought was a significant performance flaw in the old Collins receiver. What I hope was evident was that it would be OUTSTANDING if it didn't have this flaw, since it doesn't have synthesizer noise to have to deal with.

The other interesting thing that came out of the report was that the performance of todays receivers for the HF bands is so much better than say 5 or 10 years ago, while the performance of transceivers for the VHF/UHF bands (ssb and multimode rigs - not FM) still leaves a lot to be desired in terms of overload suseptibility. A couple guys said their multimode rigs just cannot stand up to strong ssb signals like the HF rigs can. Homebrew transverters or receiving converters can be much better. Possibility the manufacturers are still putting their efforts into designing sensitive front ends (which we all know means extra gain up front) at the expense of high dyn. range.

One commenter mentioned that UK amateurs seem to think the 756 has a noisy synthesizer.

What a refreshing (and realistic) attitude. One of the biggest problems I have with new grads from our licensing classes is they want to go out and buy the latest and greatest collection of bells and whistles than can afford, long before they have any concept of what they need and what the bells and whistles even do.

Cross-posted to: rec.radio.amateur.equipment,alt.radio.scanner.uk,rec.radio.amateur.homebrew,rec.radio.scanner,sci.electronics.design,sci.electronics.equipment

Techno,

I have modified my RS 2032 for computer control. I took the brute for approach and wired a CMOS Matrix switch across the keypad. This cost about $10.00 in parts and works just fine. I have a windows program to download freqs to the radio.

Although my interface allows me to read data back from the radio, I have not programmed it yet. There are several ways to do this. Most scanners are going to have a synthesizer chip that has a serial programming interface. I planned on monitoring the data, clock, and load signals going to this chip in the 2032 and determining the current frequency from the serial programming stream that appears on them. I would monitor the squelch signal and LO select as well.

Ultimately, I will use the same three wire interface to set frequencies during scanning.

If you would like to take on such a project and need help, drop me some mail. If you have a radio in mind and have a schematic, it would be helpful if you could send me a copy.

Thank's John. I checked in the Alinco WWW page but no product descriptions were available there for the DJ-580 or DJ-582. Can you answer specifically which of my needs is met in these units? Thank's.

regards,

Got to run one for a while, seems to be a nice radio, display and control keys seem to be a lot more readable than my 580, lotsa memories, the first one we set up had low audio on TX thru the internal mike, but spkr. mike absolutely woke it up. nice to see a relatively large capacity battery as std., but would have liked to see a AA pack included standard as in the 202, all in all a lot of radio, the franchise store here will sell them for $349 which is not a bad price for the features

6455. ## Help: Search for handheld radio / radio scanner with computer interface/control

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: techno@actcom.co.il.NOSPAM
Message-ID: <E6t08o.FC5@nonexistent.com>
Source record: 180855
Cross-posted to: rec.radio.amateur.equipment,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello all,

This might resemble a previous query posted on this newsgroup: in fact it's a re-phrase of a previous posting, since I haven't found a working solution yet but have got new ideas with the help of the kind people that responded. I want to find about:

1. Scanner radios with computer interface, which support realtime detection (i.e. NOT just frequency down/uploading to radio prior to use) of squelch break while searching as well as reading the frequency locked to AND changing frequency by external computer control command. I've heard about various interfaces such as the ICOM (?) C-IV interface and others that can do this (I need pointers to similar interfaces too). FAST SEARCH would be a bonus.

2. To enable a smaller and cheaper setup, dual receive (i.e receive TWO UHF-UHF, 420-500MHz frequencies AT THE SAME TIME and sound them together in the speaker) handheld/mobile transceivers or scanner radios with similar capabilities would be nice if they supported the above required features.

All pointers appreceated. Thank's!.

regards,
techno

(P.S: please email directly in addition to posting here, so no responses are missed. Please remove the .NOSPAM postfix from the reply-to address (this has been done in an attempt to reduce the amount of junk mail received here from junk mailers. The correct address is techno@actcom.co.il. Thanks!)

6458. Which power supply and tuner fot 706??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: Viking <viking@add-inc.com>
Message-ID: <01bc2d02$2bb99b60$2e08aacf@viking.add-inc.com>
Source record: 180858

I am buying an Icom-706 as my starter rig, should I get the power supply
Icom offers or one from another company? Also, I will probably get a
MFJ-969
tuner (for a multiband dipole or a G5RV) to go with it since their AT-180
automatic
tuner seems too expensive, any comments???
Thanks, Eric viking@add-inc.com

Yep,
If it does not have the surface mount technology, like
the new celluar phones, it just cannot work.

My interpretation is that the someone would like the
IC-756 the same size as an IC-706.

With all that small surface mount technology,
anything is possibe. .... Humm ...

The day after I posted that message, I went out and purchased the HTX-202. (I guess I was just a little too excited to wait any longer.) According to the guy that works at Radio Shack, the new unit will sell for $399. Maybe he was making up the number on the spot, maybe not. Still, I do know that a could purchase a dual band unit for less than that.

It wasn't easy for me to make up my mind what to do. So many choices can drive a newcomer nuts. ;-) So I justified my choice by telling myself that this is my _first_ unit. (A starter unit, so to speak.) Will I want something more or better 6 months or a year from now? Maybe, but unitl that time the THX-202 seems to work very well and I'l have lots of time to learn/decide what I like and what I want.

Your point about the dual band cost difference is very good. My friend Bill (W6DIV) purchased a dual band because the cost differnece was slight and he wanted the extra flexibility. In my case, I don't know too much, so I decided to start with just a basic unit.

Sincerely,

Bob Diaz

6472. TH22-AT locked in channeling mode

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: braganca@cenpes.petrobras.com.br
Message-ID: <857994170.17761@dejanews.com>
Source record: 180872

Hello, Im Ricardo de Braganca PU-1 UWV from Rio de Janeiro- Brasil and recently I got a problem that I'm trying to solve with your help.

Here is my question:

Anyone knows how to reset a KENWOOD TH-22AT locked in channeling mode even when setup #12 says OFF and the equipment is not modified. I really didn't know how this happens and I have no idea how to clear the EEPROM to reset the radio.

The radio is brand new and even without any experience on this piece of equipment I belive that I make everything I could (as documented in the manual). But I belive that must be a software or at least a hardware way to reset the unit.
Cleaning memories is ineffective because the radio is in channeling mode and trying to change setup #12 (channeling mode ON/OFF) has no effect to the behavior of the radio.

Can you help me? Or help me find someone who can?

Here in Brazil we don't have too much people to ask about this specific problem and Kenwood customer care asking me to go to setup #12, even after I explained that setup 12 didn't worked...

I will appreciate any response.

Sincerely,

Ricardo de Braganca
PU-1 UWV

PS: If this space is not proper for this kind of question it's because I'm missinformed, please contact me showing the right place to post thecnical questions, thanks.

Repost - Lower Price!

For Sale: Repco "Dimension Plus" UHF Repeater System

- 440-470 MHz TX/RX Operation
- Continuous duty operation
(no fan required if operated at +25 Degs. C ambient)
- 10 to 40 Watt TX Output (adjustable)
- 0.30uV RX Sensitivity
- Built in Battery Switching and Charging Circuit for Aux. Power
(uses external Lead-acid battery)
- Switchable 115/230VAC Operation
(Built in power supply)
- Internal CTCSS or DCS Encode/Decode
- Compatible with most tone panels
- Comes with Service Manual, and complete
set of extra circuit boards including power supply transformer and
spare receiver and transmitter/PA.
- Currently crystalled up and tested on 444.900MHz (TX), 449.9MHz (RX)
- Works flawlessly, and has never been in service.

Also includes:

- "dB Products" DB-4072 Duplexer.
($1350.00 new list price)
6 cavity unit w/80dB notch (250W capability)

- "Midland LMR" 19" Enclosed Rack cabinet w/locking doors, 4 tall

- "Rotron" Rack type dual 200CFM fan type blower.

All items are installed in the rack.

I am asking $1000.00 for the complete system. I plan on taking it to
the RARSFest on April 13th at the Raleigh Fairgrounds if I don't sell
it by then.

6484. ## Interesting scanner query

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: techno@actcom.co.il
Message-ID: <E6u3o8.J1z@nonexistent.com>
Source record: 180884
Cross-posted to: rec.radio.amateur.equipment,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.homebrew,rec.radio.scanner,sci.electronics.design,sci.electronics.equipment

Hello fellow netizens,

Is there an easy way to read (by computer) the currently received frequency from a scanner (might depend on model of course), squelch status, or to program a new frequency into it? For some reason, scanners with FAST search capabilities (100 steps/sec or more) seem to always come without computer interface/control. Of course there are those hi-end scanners with built in computer interfaces. Their main drawback is usually slow search speed and high cost.
I've also heard about specific solutions (like Bill Cheek's CE-232 interface, compatible with the RS PRO-2004/5/6 scanners only. These are slow scanners and not available here anyway) but they don't fit me needs.

I was thinking of finding a signal within the scanner that changes state once (or any other fixed/predictable number of times) per frequency step, and monitoring this signal with an external computer and constantly calculating the current frequency. Does anyone know about such a signal within popular scanners (Uniden, Radio Shack, ICOM, etc.)
Maybe other methods exist too. I'd like to hear about them.

In addition, if I could find a unit with BOTH fast scan and computer interface, that would be best.

BTW, what is the FASTEST search speed available on any scanner in the 400-500MHz band, either built in or with the help of an external computer interface such as OPTO's or similar? Of course, the search step should be considered (i.e. there is a 300 steps/sec available at 5KHz steps on Unidens, but it is not available in the 400-500MHz band). Anyway, what is more important is the RAW frequency range covered per second. 300steps/sec at 5KHz steps gives 1.5MHz/sec. 100s/s at 12.5KHz gives 1.25MHz/s. So I'm looking for the maximum RAW frequency range coverage per second at 5, 10, 12.5, 15, or 30 search steps. I'm ignoring fast receivers such as OPTO's Xplorer (1 second lock!) because they capture too much junk to be useful for my needs.

Thank's for any help offered.

Welcome to the hobby. Start with getting your license. Radio Shack sells a book called "Now You're Talking" that tells you everything you need to know to get your first license (most folks start with the "no-code" license). You can also get a ton of free info from the American Radio Relay League, the nation ham orginization. They're on the web at http://www.arrl.org. They will put you in touch with a ham club in your area that will help you get your license and find some gear. Many clubs have loaner rigs for new hams just starting out.

> I've looked around for some sort of starter kits...but I've come
> up dry.

There are very few kits on the market these days. Ham gear is so complex now that kits just aren't that practical. Shop around for a used 2 meter HT or mobile rig (for local contacts, usually through a repeater); you should be able to get nice ones for around $200 each. A good used HF set (for world-wide communications) can had for around $400 and up (you'll have to upgrade from the no-code license, but it's not hard, it just takes practice). Best of luck, and 73...

I am looking for the following Heathkit manuals:

HW-8 Transceiver
HG-108 VFO
10-102 Oscilloscope

Photocopies would be just fine,

73's Mark KL0AD
mherrick@ptialaska.net

6496. Alinco DX-71

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <33244FE5.575F@ibm.net>
Source record: 180896

A "coming soon" notice appeared in Practical Wireless, a British ham magazine, about this radio, with no details. Here is Alinco's response. Read it, since it DOES make sense:

>The DX-71 does not exist as far as the US is concerned. This "radio" is an EXPORT HF desktop that will ONLY be available in Europe. This radio will have nothing to support U.S. amateurs' HF needs. In fact, it is still questionable if the radio will even be released. Give it about a year or so and we'll see if we can get a base, desktop radio developed here for the States.

I hope this quiets the rumor mill. Since we also now know that the next group of Yaesu radios does not include an IC-706/DX-70 sized box, that leaves a grand total of 4 mini-HF rigs on the market:

Alinco DX-70T/TH
Icom IC-706II
Kenwood TS-50
Ten-Tec Scout/Argo

IMHO, this means that if you're considering a mini, there is no real reason to wait. Sure, something better will come down the pike EVENTUALLY... Simply choose the one that suits your needs and enjoy. I know my DX-70TH is doing a great job.

73,
Martin

I have recently become the proud owner of the Yaesu FT-50R. There are some things which I was wondering about on it though:

1) If it has two VFOs, why can't it do dual receive or crossband repeat? It seems to me that this might have been an intentional software block to decrease competition with the more expensive FT-51. Anyone have any opinions, thoughts, or comments on this matter?

2) The documentation recommends against running 9600 bps packet. I assume the problem is that the audio both coming out and going into the radio is too heavily filtered to run well at those speeds. I'm wondering if there's a relatively simple/non-destructive way to get the radio to run 9600 bps packet (perhaps open the radio and put a tap on a high impedance tap on the discriminator? although you'd still need to figure out a way to tx, probably something similar).

3) As a result of the wide frequency range, good filtration and high scan rate, I figure this radio makes a good scanner. Ok, so its not as good as a dedicated one, but how many other radios do you know with that many features, with that good coverage and can transmit for so little money. The AOR-8000 is a particularly nice scanner, not because of its outstanding receive (although its not bad), but because it has the capability of being computer (or Opto Scout) controlled. I'd love to have a similar feature on my FT-50. The computer programming is nice, but I don't think it goes far enough. Now, it occurs to me that since it has a removable keypad there should be some way to get a computer to emulate a keypad and directly enter frequencies. Does anyone have any information on the plausability of directly interfacing through the keypad connector (and/or how to do it)? What information goes through the connector? etc...

6498. FS: NCG-15M (15m SSB/CW QRP rig)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-10 00:00:00 UTC
From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <33245367.52E7@ibm.net>
Source record: 180898

I have for sale an NCG-15M, 10 watt QRP monoband "mobile", about the size of today's Alinco DX-70 (actually, a bit wider). This is the later version of the rig made by National Radio of Japan (Matsushita/Panasonic) and marketed in this country by NCG. It is NOT the grey-faced model with the funky VXO tuning--this one is black, has a normal tuning knob, and an excellent receiver. Rig is mint, with mic., mounting bracket, box, and manual. $125 plus shipping - firm.

Source record: 180705

I agree with you, I am in the same situtation, putting together a station after a number of years of inactivity, I skip any add that does not have a price on it, I barely have enough time to trade e-mails to check a price. I also do this when I see something like "TS123" for sale, but it never gives any information, like what is the coverage, how much power and does it have any nice features. I have been inactive for a long time and I don't have every type of rig info memorized. This is my turn for spewing.

Can we drop this thread before it gets started? People may have many
reasons for not posting a price, not all of them sinister or evil.
This is a free market and if you choose not to look at or make offers
on postings without prices, that is your perogative. Likewise it is
the perogative of the seller to post a price or not. Personally
I almost always post prices except when the "price police" get on
the newsgroup and try to push prices below market.

Just skip the post and be done with it.

73,
Todd

Source record: 180708

Hi All,
do any of you have any knowledge of the Microwave Modules
linear Amp model MML 144/30-LS ?

My one has started to play up after all this time of owning it.
It has a Preamp in its circuitry and if I turn it on, it does not
increase the signal strength like it used to, but the white noise,
blanking out the original signal.

Has anyone any ideas as to what is causing this and whether it is
easy for me to have a go at fixing.

I have opened up the casing to see if anything is obviously wrong, of
course nothing is apparent otherwise I would not be sending this.

I do not have a circuit diagram or any other info except that
supplied and that only tells you what it can do.

Any replies will be thankfully received.

Many thanks

Paul G1CQX

If you find something in a closet from 30 years ago and don't know what the fair market price is, what do you do? You look at it and say, "It looks like it's worth $10." Later on you find out that you just sold a very rare dohicky that's worth $100 to a collector. The buyer has a point of view and so has the seller.

Its Murata - with one "T". You might try Digi-Key/Mouser/etc.

Real question is -- if you want to upgrade the filtering in the 756, why use a crummy el-cheapo ceramic? Kiwa makes a nice set of 455 KHz filters in a variety of bandwidths, with excellent skirts and ultimate attenuation characteristics. Kiwa is at http://www.wolfe.net/~kiwa/index.html. There are good crystal filters to be had, too.

From: davemix@aztec.asu.edu
Message-ID: <5g4mr6$p9u@news.asu.edu>
Source record: 180719

Since I see only one answer, I will share what I know. I have an FT-50R
so does my wife. We expected the same thing you did. The main use for
DCS we can find is to keep the radios quiet in the presence of pagers.

Most repeaters block tones. I do know of one in the Phoenix are here
where we live, that permits turning the block off.

Hope this is some help.

Well .. if a seller does NOT have a clue as to the price .. (i.e., like R. W. says) .. then it would be appropriate to not have a price on your 4sale. but, on the other hand, I doubt that happens very often here on the Internet. If you want to find a price, do this: http://www.dejanews.com .. then, type in the brand/model/etc, that you are interested in .. and .. V O I L A !! here comes a buncha stuff.
I agree with Terry. But ... then... RW has a point! Hey . if'n I can buy an ICOM 735 for $200 .. whata hey!

From: res@cmprime.cis.att.com
Message-ID: <5g4pvr$g1u@anchor.cis.att.com>
Source record: 180722

: Ive been considering the IC 736 HF + 6M. Any experiences would be
: appreciated.
: --

I have one. It is a great rig. There are other high performance rigs
on the market but for the $$ I think it can't be beat.
It has a fantastic display, the rx is good, the icom filters are
outstanding.
As great on 6m as the other bands.
I don't notice any birdies at all on any band.

Some faults:
Tiny, almost imperceptable hiss when the rig is squelched. In a quiet room
you can hear it.
There is a slight drift. i.e. if you put it on a net (like those 75 meter
gangs that "own" their frequency !) you will notice a slight drift
(possibly 50 cycles) after awhile and you may have to retune. Also, if
you tune in to wwv LSB, and you switch to USB you will notice a slight
change in freq of the beatnote. The FT1000MP doesnt have these faults.
Some folks think the Icom audio is high pitched, but they all are, likely
caused by the mic, not the rig.

6523. Re: IC-756 phase noise clarification

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: res@cmprime.cis.att.com
Message-ID: <5g4qj3$g1u@anchor.cis.att.com>
Source record: 180724

: I saw a lot of messages on this reflector reporting on IC-756 phase
: noise problem. Unfortunately no one of the guys reported what are
: the figures for this important parameter and how did check it. The
: phase noise can be correctly checked only in RF laboratories with
: a special test set-up (including a special mixer, an extremely clean
: signal generator and a LPF/HPF combination) and not only with a
: spectrum analyzer. With all the respect, this equipment and the
: necessary knowledge are available only at very few ham shacks.

balance deleted

What do you think about the technique of estimating (or comparing)
phase noise by measuring the noise due to reciprocal mixing?

In other words what if my setup involved feeding a strong, clean signal
into the receiver, and measuring, in some fashion, the noise that
I hear in the speaker? That noise would be due to the phase noise of the
synthesizer mixing with the carrier of the signal generator and appearing
in the IF passband of the receiver. Would that noise be representative
of the noise that would be transmitted?

I think the above test is easy to setup, if you have a clean signal
generator. I use a HP 8640B which is not synthesized. At a level
of -30 dbm I can hear phase noise on my IC736 at approximately 14 KHz
away from the freq the rx is tuned to. On a FT1000 it is about 10 KHz
if I remember correctly (I posted results here 4 days ago). On a
Collins 75S3 I could hear no phase noise at all, indicating that my sig
gen is clean. I realize I did not MEASURE accurately the level of
noise in the passband, but rather just noticed the point at which I
could hear the phase noise. My tests could be made more precise.

Comments?

I put one in the Glove box of my small truck .

6525. ARRL Publications?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>
Message-ID: <3325EAB2.30A6@primenet.com>
Source record: 180726
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I received an advertisement from ARRL today (and I
love to receive junk mail, really) and realized that
one can spend too much time staring at a tube (monitor).
There are many books in the Publcation Catalog that I
had never even heard about!

Not counting getting the back issues of QST on CDROM
(had to purge/recycle the hard copies some time ago)
and the 1997 Handbook (either CD or hard copy as my
copies go from 1974 to 1981 to 1987 and a *lot* does
happen in the world of ham radio in 10 years), I came
up with the following list of interesting offerings:

#5714 Personal Computers in the Ham Shack $15.95
#5854 Getting on Track With APRS $14.95
#3207 W1FB Design Notebook $10
#3851 Hints & Kinks $10
#5617 QRP Power $12
#3657 W1FB QRP Notebook $10
#4319 NOS Intro $23
#4955 Packet SPEED $15

Some seem like remarkable buys, others... Can't judge a
book by the cover either (you can quote me). Anyone have
specific comments on any of these books?

Where is the least expensive place to order these as the
total (if I were to get all of them) is over $110?

Anyone have "used" copies of any of these books for sale?
Anyone want to get rid of the QST or ARRL Handbook CDROMs?

Not that ARRL Publications are such a bad buy, I'm just miserly!

> Bob, AA8X

Nope you are wrong! At least Icom has the guts to show they made a mistake
or two and are willing to put up some $$$ to fix things so that the product
will sell and they can hopefully recover their investment. A case in point
is the IC-821H, a great radio which will undoubtedly live on for a number
of years. Your complaints sound more like sour grapes. So your stuck with
a MkI 706 or an 820 and want the newer radio, but can't sell the old one?
So, instead we should all sit here and complain about their poor design?
Come on - get real.

6533. ANY REPLACEMENT FOR KENWOOD 870 IN SIGHT?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: Gary - KJ6Q <tech@thereporter.com>
Message-ID: <5g4588$21g@lori.zippo.com>
Source record: 180734

I am a Kenwood fan, and already owning an 850, 450, and 780 (2 meter/440 mult-mode), I bought a new TS-570-D. This new rig has worked so well, with the EXCELLENT DSP (I operate 160 and 75 meters a lot) that I quickly sold my 850 and 450 - putting the proceeds from those sales aside in anticipation of an improved version of the current 870, which also has DSP. As far as I amd concerned, buying a new rig WITHOUT DSP is like buying a car without wheels! I am able to have comfortable QSOs with DSP that would have been difficuld or impossible without it.

SO, are there any current rumors of an updated 870 on the near horizon? After all, I have all this money to spend....

I've tried them all. I own the Timewave 59+ nut may soon upgrade to the
599 model which has 4 times the processing speed for $50 more.
These filters make HF sound like 2 meters FM repeater full quieting.
I like the Timewave better than the JPS. But either brand will be a good
choice.

I have a Timewave 59+, and wouldn't trade it for anything. DX on 10M being what it has been lately, the Timewave allows me to work Central and South America regularly, even when the noise seems to "swallow up" the audio (without the DSP in-line). If I had a beam, that wouldn't be such a feat, but I only have a 10M vertical on my one-story roof, and find the DSP unit invaluable for those hard-to-copy stations. It is, of course, also good for ground wave traffic, allowing you to "hear" farther than you're used to IN PRACTICALLY ALL CASES. Add an Ameco PT-3 preamp, and you'll have one hot receiver, so-to-speak. Good luck however you proceed.

According to my 1996-1997 Repeater Information Directory (California Edition), there appear to be more open 2M repeaters than open 70cm repeaters in the L.A. area.

However, I'm still new to all of this, and there may be several key things that I just don't know yet. Also, there's the other side of the coin (so to speak), where the 70cm band has less people on it and it's easier to find a given frequency open.

As to 2M only OR dual band; maybe it all comes down to what's important to the user. For me, I just wanted to start with something simple and basic, which is why I purchased the Radio Shack HTX-202.

6541. Motorola DPL Testset ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC

In order to make the MARS MOD to the Knwd TS950SD, you just clip 1 of 3 diodes. If you know of this, what are the OTHER TWO for? you suppose there is something of benifit to be gained in just clipping one at a time and see what happenes or would there be irreparable damage?

Hi Grant-

Nice to know that I'm not the only one who feels this way. Your comment about getting a "sound picture" of the area of the band on both sides of where you are working is quite accurate, and it *is* quite a useful feature. That Drake 250 cycle position is a gem.

6545. TRADE: My 1000MP, your 950SDX

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: Jeff Singer <k2kv@netusa.net>
Message-ID: <3325C220.2145@netusa.net>
Source record: 180746
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.ham-radio.swap

Here's an interesting proposition:

I have an absolutely mint Yaesu FT-1000MP with matching SP-8 SPKR, extra 250, 500, 2.0 filters, which I think I'd like to trade for a Kenwood TS-950SDX w/SPKR, in same condx.

Almost bought the Knwd instead, but the Yaesu was more alluring, newer technology, etc. at the time. Now I find I miss my '940 (which I sold in the process), and would be willing to give up the 'MP for a spin in the '950.

Any Kenwood '950SDX guys out there curious/thinking abt getting an MP? Could work for us both.
SDX only, not the SD, please.

Thanks for reading this.

Hi,

I am looking for an Optoelectronics OS-535 scanner interface
board for a PRO 2035 Scanner. I want a non-current production
board; one that was made/purchased at least 60 days ago. I
will consider package deal on scanner with board installed,
but would prefer to purchase uninstalled unit.

Thanks,

6558. IC-756 phase noise clarification

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: morel.GRunberg@telrad.co.IL
Message-ID: <c=US%a=_%p=TELRAD%l=MISMAIL-970311095031Z-102@mismail.MIS.ELEX.CO.IL>
Source record: 180776

I saw a lot of messages on this reflector reporting on IC-756 phase noise problem. Unfortunately no one of the guys reported what are the figures for this important parameter and how did check it. The phase noise can be correctly checked only in RF laboratories with a special test set-up (including a special mixer, an extremely clean signal generator and a LPF/HPF combination) and not only with a spectrum analyzer. With all the respect, this equipment and the necessary knowledge are available only at very few ham shacks.

I would like to see what are the dBc/Hz figures for 2, 5, 10, 15 and 20kHz offset and to compare it with rigs of similar price tag (abt. 2.4k$).

As far I know, they are no agreed requirements for amateur market, but for a 2.4k$ rig figures like -115dBc/Hz @2kHz offset or -125dBc/Hz @20kHz offset are not so bad. Better figures are usually requesting large R&D investments in design concept and specialized components. This can be a problem in today troubled shrinking amateur market with very short lead time to market and difficult competition and is also one of the reasons behind the large numbers of firmware, software or hardware "bugs" or poor human-engineering present at first series.

The special lower introductory prices are not free: the first buyers are doing on their own expenses the field site test instead the manufacturer and this happens with high-end rigs too (>4k$).

Maybe one of the people claiming this problem can share with us his test results for a better understanding of the problem ?

>The 870 is junk up against a 990 go with a 990 early 870 have a

>slight problem in xmitt audio the 870 has been a flop for Kenwood

>they are not selling due to bad rap on early units

Both have poor RX . 990 has noisy VFO. Try it with strong (9+50db)
signal some 20 khz away and you will hear the noise come up on your RX
freq. That will make the entire band "breathe" when that strong
signal is manipulated. 870 has got another problem. 6khz filters on
SSB and 3 khz on CW may be OK for demonstration of it's DSP bells and
whistles. It is also OK to use the radio for casual dxing, but try it
in the contest side by side with something really good (TS-850 or IC
775 will do for that) and you will see that nothing so far is invented
to substitute good filters.
Just my 2 cents. We recently tested both rigs plus 850, ic 775 and
ic-751a. ts-870 (we actually tested 2 of them) came out the worst as
far as sensitivity and dynamic range is concerned.

I don't know if I'm alone in this or not, but I wanted to speak mt mind on this subject...kinda one of my pet peeves, I guess.

I am in the process of putting a ham station back together, and I shop these newsgroups every day. But when I come across an ad that I'm interested in, only to find that the seller has not given even a ballpark price, I move on to the next ad without giving the item a second thought...even if it's something I really would like to have.

To me, when someone puts NO price on their item(s), it means they're hoping that I'll offer them more (maybe a LOT more) than they were expecting, or perhaps they have an unreasonable price they're hoping to get for their item.

Everyone who offers something for sale has a price in mind that they hope to sell that item for, or at least have a bottom line price that they'll settle for. I don't mind a price tag with "OBO" on it, or "Make Offer Around $xxx", but a message that says "ABCDEFG FOR SALE" with not even a ballpark price tag, I reject it right away.

Thanks for letting me vent, and if I'm full-o-crap, I'm sorry. Don't mean to offend anyone.

Terry,

I must agree with you. I irks me when there is no price, and in most cases, I also will not even ask. I believe that many of these folks are "trolling for suckers", hoping that the buyer will be someone who is uninformed and will offer too much for the item. I realize that this is not always the case. Often, the seller really doesn't know what his item is worth and he doesn't want to just "give" it away, and I can't blame him. But I see too many posts on here from folks that I know are not uninformed newbies, and I know they're aware of their items' value.

When I post something, I always include a price, and I indicate if it is a firm price or if it is negotiable. This is just common courtesy as far as I'm concerned.

Flame me privately, if you feel you must.

ICOM W2A 5W dual-band transceiver (2m & 70cm). Has extended
receive including 800MHz cellular. Excellent condition.
Comes with original box and manuals. Includes 1000mAH 7.2V
and 800mAH 12V ni-cads, 2m rubber duckie, dual-band telescopic,
HM-65 mini speaker-mike, CP-13 cigarette lighter adapter,
BA-11 bottom cap. $250 shipped

Ramsey PA-10 2m power amplifier. Requires 12VDC @ 5A. 1W in
gives 15W out, 4W in gives 35W out. Includes manual.
Excellent condition, very low hours. $30 shipped

Comet CF-4160 duplexer, covers 1.3-170MHz and 350-540MHz.
Like new, includes data sheet. $15 shipped

Buy everything and $ave -- only $275 shipped. Plus I'll
throw in an MFJ-1702B antenna switch. I think these prices are
fair, but feel free to make me an offer.

Shipping: The above prices include shipping anywhere in the 48
states. If you want COD shipping, you must pay any COD charges
over and above the normal shipping charges.

If interested, send me e-mail.

6576. ICOM IC-R7100 commands?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-11 00:00:00 UTC
From: rob@pe1chl
Message-ID: <E6vvDy.CJE@pe1chl>
Source record: 180794
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I am looking for the complete CI-V command set of the IC-R7100 receiver.
It is no problem to find general docs about CI-V, so I have already built
an interface and have written a simple program that displays the frequency
and mode when the receiver stops scanning.

However, I would like to control the AF GAIN depending on the frequency
where the scan stopped. It is possible according to the user manual, and
there even is a LED on the front panel that is supposed to indicate that
the AF GAIN is being remotely controlled.
But, this command does not appear in the generic CI-V documents that I
have seen.

Does anybody have a complete IC-R7100 command set, or know where one can
be obtained?

Rob

I also agree, when I see a post with no price, I go right on, even if I want that item.

Another thing that bothers me even more, is when after replying to a post, you hear nothing from the person. Common courtisy would be to at least send back a message with "it's already sold" or "sorry sold it" anything. Then your not holding your money, waiting for a reply for an item that's already sold, you can go ahead and be watching for the item from someone else. I for one don't want to send an email to someone saying "I'll take your whatever" and then see a similar item and buy it instead. Then after days or weeks of no reply, find out that there were 2 other posts for the same thing at similar prices, but they are now sold too, and your stuck without your what's-it.

I'm off my soap box now.

If you must flame me, do it by email, save the bandwidth for the NG.

thanks >>> Doug

This radio is in very nice condidtion; I just replaced it with
a dual-bander. I'm original owner, non-smoker, the cover has
never been off this radio. This is a good basic 25 watt 2 meter
rig for mobile or base/packet use. It has a unique front panel
that swivels up or down.

Radio comes with original owners manual, mobile bracket with hardware
still sealed in original bags, and hand mic. External speaker not
included (it stayed in the car).

Asking $175 and I'll ship.

73,
Skip Withrow - WB0BBE

6583. FS: Digital LCR Meter... Measures Inductance, Capacitance, and Resistance

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: vhadley@ee.utah.edu
Message-ID: <3326fd1e.7825819@198.60.22.3>
Source record: 180502

For Sale:
Wavetek LM22A Digital LCR Meter
Inductance, Capacitance and Resistance Tester

Features:

- 22 User Ranges for LCR Testing
- Tests 7 Inductance Ranges from 0.1uH through 200H
- Tests 8 Capacitance Ranges from 0.1pF to 2000uF
- Tests 7 Tesistance Ranges from 0.01 Ohms to 20 MOhms
- Measures Dissipation in L/C Ranges
- Complete portability with 9V Battery
- 2% Basic Accuracy

Performance/Value

The LM22A is a hand-held LCR meter featuring a high level of accuracy and performance. Is is capable of testing 8 ranges of capacitance, and 7 ranges of inductance and resistance (equivalent series resistance). The LM22A can also measure dissipation, a valuable indicator of inductor and capacitance performance to within 1.0% accuracy. Two different internal test frequencies (1KHz and 120Hz) are used for optimizing the accuracy of the readings between the high and low inductance and capacitance ranges.

Readings are displayed on a high contrast 3-1/2 digit LCD. Fused input protection is provided on all ranges and over-range indication tells the operator when a wrong scale has been selected.

The LM22A has it's own 9V battery for complete portable operation or it may be operated from an AC source using an optional AC Adapter. A "LO BATT" indication is displayed during the last 5% of battery life. Typical life for a 9V alkaline battery is about 40 usage hours.

The LM22A comes ready to use with alligator clip test leads, an owners manual, and a spare fuse.

Dimensions: 174mm (H) x 90mm (W) x 41mm (D)

****

This unit is essentially brand new! Purchased last year, I used it for about 1 hour and have not used it since. It is in perfect operating condition.

I have the original box it came in, the test leads, manual
and product registration card (still blank).

I will also throw in the wall adapter I got for it for bench
use.

Asking $165 plus shipping.

6584. NEED ICOM IC-701 HELP.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5g6u44$fkq@coranto.ucs.mun.ca>
Source record: 180503

Below is a letter I sent to ICOM for interface information on the ICOM IC-701, IC-211 and IC245 series transceivers from the late 70's. You would think they would still keep the information on older radios regardless of it they still work on them.

They responded with a "Sorry Carl, No longer supported".

The radio is working fine and I want to make a project out of it. I know it's an older model but I didn't think it would be this hard to find any information on it.

Also, do anyone know if ICOM put out a service manual on this radio? I can't find one anywhere.

ICOM America, Inc.
2380- 116th Ave. NE
Bellevue, Wa 98004

I am the owner of an ICOM IC-701 (1979 model) transceiver. I know this is not a current model radio, but I am hoping you still offer some type of support for your older radio equipment. I am an owner of several ICOM products including current models and have been very happy with them.

The support I am looking for on the ICOM IC-701 has to do with remote programming. I hope you can help me because I do not know where else to look for this information. Below is a quote taken directly from the ICOM IC-701 product brochure.

" Remote programming; The IC-701 LSI chip provides for input of touch tone and programming data from an external source, such as the microprocessor controlled accessory which will also provide scan and other functions. Computer control from a PIA interface is also possible (data available on request)."

I am familiar with the microprocessor controlled accessory mentioned in the brochure which is called the IC-RM 2. Could you please send me any information you have on remote programming for the IC-211 including the PIA interface which is mentioned above. Especially usefull, would be data protocol and the command format used to control the radio. More than likely, this information would be in a hexa decimal format used to send information like frequency etc. to the radio. I am fairly sure that the commands are different than the ones used for the IC-720 or the current IC-735. An interface could easily be built by looking at the radio schematics etc. but the commands used to

control the radio can only come from your company.

I believe there are 3 versions of the ICOM computer interface
specifications called the CI-V (current models, IC735, etc),
CI-IV (IC-720, IC-271, etc) and the CI-?? used for the
IC-701 HF transceiver, IC-211 2m transceiver and IC-245
2m transceiver.

Sincerely,

Carl Hodder.

I would love to hear from anyone with this information or
a direction to point me in.

Thanks, Carl.

6587. IC-735 receiver cuts out after 30 minutes of operation

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: Alan Hopfer <aghopf@monsanto.com>
Message-ID: <01bc2f1a$a2d51520$208e90a4@aghopf>
Source record: 180506

I am having a problem with the IC-735 receiver that I have been trying to resolve. The problem is that sometime after about 20 to 30 minutes of operation the receiver cuts out over 1 khz of bandwidth on even 100 khz increments.

So between 7.100 mhz and 7.101 mhz the receiver is completely dead. After the radio cools down, the receiver goes back to normal operation.

I tracked down the area of the source of the problem to the PL section near the IC18 uA7805C. This IC has a heat sink attached. When I spray component coolent in this area, the receiver goes back to working normally. I replaced the 47 uf and 100 uf electrolitic capacitors close to this are with no success.

Has anyone had a problem like this? Is there any known engineering changes for the IC-735 to resolve this heat releated problem?

Thanks,

Alan Hopfer

: Where did Kenwood get the ability to build the same radio
: as the other guys and sell it for so much less? Before you
: say something dumb like "Kenwood sucks," I'd ask you to

A few years ago there was a survey on netnews in one of these
rec.radio.amateur newsgroups regarding service from the major mfrs.
As I remember:
Ten Tec was tops
Icom was next
Yaesu was next and improving
Kenwood was last and deteriorating.

As I also remember there was almost nothing good said about Kenwoods
service, with lots of horror stories about rigs being sent back over
and over. Hams getting the runaround. Kenwood not performing.
I know of a local here in NJ who was told by Kenwood after he sent
his 940 back about a half dozen times that he should "consider buying a
950 since the 940 was ten years old it was OBSOLETE !!!!"

The ratings made a big impression on me. I wouldn't even consider a
Kenwood until they get their act in order. I wonder if the thread was
started over now if the story would be any different?

I do hear they make good stereos !!!!

I WILL TAKE TOTAL CREDIT FOR THE IC-706 MARK II being released early
since I am the originator of the rumer!!!!!
Seriously folks, I hear about most of the radios from a few dealers and
from sources in Japan. THere is no way I could have guessed the name
IC-706 MARK II as I had posted on a message about 6 months ago.
It appears that Icom knew of many bugs in the original version and
6 months ago designed a new improved version.

Nice rig, some improvements, but you won't be able to get parts
in six years or so--and you'll need them, too. See what
happened with the Kenwood 440 and others.

And you'll spend a bundle on those pricey accessories as well.
You KNOW you will!

Further, the operation of the unit will be so complex that you
will be killed in a traffic accident trying to figure it out.

If you're lucky enough to escape that, you'll take a trip and
forget to pack the manual.

Source record: 180524

All very interesting Meade-

Yup, the 570d is a super radio. I spent a few
hours on it at the local ham store. I fully expect it to be
the Monte Carlo/Cutless/Skylark of the the late 90's.
It's swank looking, great display, very good DSP,
All the features you would need, and priced very aggressively.

It's a dam good buy.

Thing is , I ...as you know...bought the IC-756...moving also from the
TS-850sat...and I think I made a good choice. The thing the 756 and
570d have in common is that they have sencitive receivers...similar
DSP (although the 756's DSP is closer to the IF)...They have similar
tuning feel and ratios...and both have unique displays...and even are
similar in color.

The differences are (in my humble opinion) that the Spectral Display
IS actually usable. It adds a dimension to the radio that is comparable
to gaining ones sight for the first time, Now, its a little fuzzy,
not as good as 20/20 (CRT) vision, but its vision none the less.
Just watch the baseband noise level float up and down in relation to
several signals on 9mhz in the evening and then tell me how superfluous
the display is. Very good HF radios can ALL pull out signals just above the
noise these days...and all are using similar crystal filters...and even
the same japaneese active devices in the circuity. My little Alinco DX-70
can work 99.9% of the signals out there...using crappy little Murata
IF filters...because HF just is not that challenging to todays technology.
Another difference is that the NR mode DSP is slightly superior on the
756....also the degradation of the recieved SSB audio is less on the 756's
auto notch. The 756 also has a second RX channel...not incredable but a
definate advantage. You also get to add filters in both IF's and have much
more flexibility in choosing them.Another thing that you pay for on Icom is
the robust-ness of the construction. I didn't look inside the 570d, but the
entire 756 is constructed inside a cast alluminum frame. Its totally
commercial looking inside. Kenwoods have traditionally used stamped metal
chassis.(that yellow colored metal). Oh yea, the alphanumeric labeling
on the memory list is really cool...just scroll down the page and hit SET
and you are there.
Lastly, the 570d's RX sounds good...beautiful Kenwood audio in and out as
usual. The Icom has a very different sound. It, in a word, is "Clear".
The clarity of the SSB and AM reception is a real eye-opener. It is clearly
better than the generation before it. Like I said in a previous review on it,
it is like the difference between records and CD's. Records sound really good
and warm...and we were used to them...but put on a CD...and it is obviously

Clearer..and for the same basic reasons. I'm not even making a real judgement here, I like warm "record" sound, but for short duration- high intensity use, I like CD's.

So, is the 570 a great deal? Yes it is. Is it a better value? I think so. Is it a better radio than the 756...No.
So-$350 bucks more...for a better. Twin RX's
radio?..some of us will;

6606. Heathkit HM-2102 wattmeter

Source record: 180526

Hi Gang,

Here's your chance to add a very nice frequency counter to your workbench at a good price. I'm selling an Optoelctronics Model 8000 bench-type counter, with 8 large, bright LED digits. It has two input channels, a 60MHz input with 1MOhm input impedance, and a 600MHz input with 50 Ohm impedance. There is also an input attenuator switch, a gate time switch, etc.

The unit is in excellent mechanical and electrical condition. The cabinet is of heavy anodized alumnimum. The counter has a built-in 120VAC supply, and has provisions for internal nicad batteries as well (it takes AA nicads). Unfortunately, I don't have the manual, but the operation is self-explanatory. I'd like to get $150 for it, plus $10 shipping and insurance.

Thanks and 73,

Jim W8ZR

6612. Kenwood TS-940S -vs- newer mid priced radios

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: RobertRobinson <psykik@gramercy.ios.com>
Message-ID: <332743CD.1110@gramercy.ios.com>
Source record: 180531

Greetings,

I have the opportunity to purchase a TS-940S for a reasonable price.
For its time, it was hard to beat as a high performance
transceiver...many bells and whistles, 250W input and a
quadruple-conversion receiver.

My question is:
How does this top of the line model of several years ago compete with
the newer mid-line radios of today such as the TS-870's, etc. (DSP and
built in antenna tuner not withstanding)? The cost of the TS-940
with matched components would be less than the above radios. I am
interested in complimenting the older, somewhat limited yet well
loved Yaesu FT-101B in my shack.

Any feedback would be greatly appreciated.

73 de,
Robert Robinson

6613. SSTV with AEA PK-900?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: kharker@cs.utexas.edu
Message-ID: <kharker-1203971813370001@slip-111-18.ots.utexas.edu>
Source record: 180532
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Has anyone out there done SSTV using the AEA PK-900's "analog" mode? According to the PK-900 manual, this should be possible, but the details about how it's done boils down to, essentially, "let the software handle everything." I've scoured the prominent shareware SSTV software without the least mention of the PK-900 or PK-232 or any hint of how to substitute the homebrew interface they all mention with the PK-900. Now, I suppose I could just go out and spend the $30 or so to build the interface and a new cable, but I'd also need a new serial port card, I'd be swapping cables, etc. and it would be just all-around more elegant to use the hardware that's already there...

If anyone has any specific information or pointers to information, I'd appreciate it.

All the horror stories you have heard are probably worse than you know!

You are mistaken about the stereos...they make mediocre stereos, and semi-kit amateur radios. To my knowledge, Kenwood has never won a shoot-out against any other brand in any area.

Don't get too happy. I just got an R-8500, and the listed control codes are <WRONG> They don't work. I wasted a whole day on it, then after much "please hold" from Icom, they tell me "Oh, you need the old codes, they are in our extra book."

Whathell is going on here? That RX wasn't on the shelf for more than 2 weeks, and they are telling me that the codes on the printed manual (that takes about a month lead-time) are NEWER than the software in the rig???

After waiting another day for fedex, finally I have the right data in hand. What a mess!

It's a nice rig, but as usual, the manuals bite.

I use a W9GR - 3 DSP unit, and I find it about the same as Doug
finds the Timewave. For a GREAT demo on DSP or the W9GR unit, try
the following web site http://oro.net/~w9gr/ There are some demos
you can listen to with DSP in and out of QSO's. Tim Cook tcook1@ohiou.edu

>
> --
> Michael Cooper
> mikecooper@ti.comThis is very interesting. My 90 Ford ranger had the same problem. When I asked what to do at the service department they said it can't be fixed, but it has been corrected on newer Fords....So I just hooked up my radio in my new (new to me) Ford f-F150 and guess what????
The fuel pump is loud and clear.
So back to the service department and lo and behold I can purchase the rfi filter to put INSIDE the gas tank (which one) any so it goes...

I'll be watching for a solution if antone know of any other way.

> So-$350 bucks more...for a better. Twin RX's
> radio?..some of us will;

I can't believe Icom did NOT include an IF NOTCH FILTER. they give you a
DSP autonotch but I heard it is AFTER the AGC. So you see your S Meter
pegged by a strong "tuner upper" and it is affecting your AGC!!

That's why they have to plan to sell their radios at CB shops and
outlet stores. Along with their car stereos, I guess.

My observations tell me that it is the "fan fair" that keeps Kenwood
alive. Sorry that I have to say such thing but please don't take it
offensively. It's just my personal thought and not targeting anyone
out there.

It's quite useable. The 100% shield keeps CATV service ingress and egress to a minimum and loss at 2m and 70cm is very acceptable - after all its to be used to 800MHz - I couldn't measure it with a Bird on a 100 foot run at 2m - no 440 slug. The impedence mismatch 50 to 75 is only a 1.3:1 SWR if you can actually measure the feedline versus all the other possibilities. It also works fine at HF - I've used only 5/8" heliax (flea market tail ends) or CATV for HF feedlines (to balun at antenna) for years - the 100% shield really cuts the static pickup from dimmers, acquarium thermostats, Fords driving down the street, etc. when you live in the city centre.

Trick on standard CATV drop cable is to use the F connector properly crimped and then an adaptor to UHF or N - the aluminum foil shield is hard to work with into one of these connectors directly. I learned this the hard way - it took Mac VE9IM / VE3OS to set me straight and lend me his crimping tool.

And the price per meter is usually right. 73, George VE3YV / K8HI

The heading contradicts the content...
IEEE 802.3 thin ethernet cable is just the regular thin 50ohm coax
(RG-59 I think) or maybe a little better since it's under IEEE control
(I know the IEEE802.3 THICK coax is really high quality, since it must
have strict quality control to allow tapping into it at many points
,up to 30 low capacitance taps per 100 meters. On the other hand, it's
designed only for 10Mbps, not VHF/UHF) .
The heading talks about Cable Television Coax, which here is a white,
low-cost coax feeding CATV signals to the home. Gut feeling: it's not
so good (since it must be cheap and they have lot's of amplifiers
along the way). Yes, I guess someone will have to run a test on this
cable...
Just my 2 cents...

Most repeaters strip off the signaling tones like CTCSS and Digital
coded squelch before passing on the received audio to the transmitter.

It is not surprizing the DCS does not pass through.

Right on about "come see my page", John! It's getting more
ridiculous about what's posted in "swap" to the detriment of many
people's time. For the most part, the web posting folks are flailing
around to get an audience for something that pales compared to others
already there!

The worst part is that the newbies fail to state what is unique
or different that should deserve anyones attention. The maxims of
advertising is features, uses and benefits! Anyone that is a "me too"
just can't get any attention. This should not be a surprise to anyone.

No Steve, Burt really gets things going, you just make silly
predictions and even sillier claims about those predictions.

Did you hear about the new Yippytero? It is the companion piece to the
scanner of similar name. It is all mode DC to daylight out of the box
no mods needed. Some desolder pads are provided for those who just
can't leave it alone. Power is rated at 1500 watts 100% duty cycle
thanks to a Wayne Green signature model cold fusion battery. Rumors of
a Romulan on the design team persist.

There was a company in San Marcos CA that bought out all the parts that Atlas had left when they went out of business (the first time) .. perhaps the fine people at RF Parts can lead you to them - RF Parts' telephone number is 619-744-0700.

The reason that it doesn't work over a repeater is that it is a square
wave, digitally encoded, very low (subaudible) signal (somewhat like
CTCSS, of "PL", which is a sine wave subaudible signal) - and almost
all repeaters either filter out or refuse to pass any signals below
approximately 300 Hz.

If you have a channel in memory with a 600kHz offset, just transfer it to the VFO, and the offset will follow. Manually setting the offset is one of the SET functions (you should see the 560 come up as you dial thru the SET functions, then just turn the knob on top).

6650. Trade: wireless networking equipment for Ham/Shortwave equipment.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: joshin@cats.ucsc.edu
Message-ID: <5g5qjt$s0a@darkstar.ucsc.edu>
Source record: 180666
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.shortwave

Hi,

I have a pair of long range wireless radio modems that I'd like to trade (or sell) for either Ham or shortwave equipment. They were partial payment for a contracting job I had and I don't have much use for them. Though, it was fun to play on the net from the beach 1.5 miles away (connected through a unix server).

They are the GRE Gina 6000N spread-spectrum radio's and full specs for them can be found at "http://www.greamerica.com/6000n.html". I also have 50' of low loss cable (can't remember the designation) and a yagi antenna with 6db of gain.

The radio modems have a communications speed of 38.4Kbps full duplex with an airspeed of 128kbps. They are spread-spectrum in the 900mhz band so no license is required.

I'd like $1000 cash or equivalent in trade. I'm looking for a HF rig, a dual-band 2m/70cm handheld, a high quality shortwave reciever (ooh, a AOR 7030), and accessories.

I think you put it just right. This reminds me of the Star Wars
releases over the past couple of months. Same radio (which I do like),
but no big reason to upgrade. They could have at least made 2 meters
35-50 watts. Look for the MK..... coming soon.

Just a little info regarding the IC-706 etc. As the service manager for the local Icom dealer on Guam we talk to Icom Japan and get pretty good info as soon as it made avaliable (normally quite a bit before the general public at large). According to a fax from Icom Japan the IC-706 MKII radio was made avaliable before they had planned on due to a rumor that had been going around about the production and soon to be released IC-708. Icom said they had never planned on a 708 model and don't plan on producing one.

I thought I would let you know what I knew so that you can make a better judgment about the IC-706 MKII. If Icom produced a radio much sooner than they had planned on, as indicated in the fax to my office, I would expected some "bugs" in the early model.

I don't have any experiance with the 706 model as we don't sell too many ham rigs, mostly marine and commercial gear, so I wouldn't quite know what to expect with a new 706 MKII unit. I'm sure we will soon be finding out :)

ICOM America sells a book titled the CI-V Reference Manual for $ 15.00
plus shipping and handling. It does have the commands for the R-7100
included in that book. Later radios now have the command sets
included in the instruction manual for each radio.

Don't think so. "Handie Talkie" was the model name of an early series of Motorola commercial handhelds, and the name stuck. These radios said "Handie Talkie" right on the label. That name was a riff on the WWII "walkie talkie", the term GIs used for the (very large and heavy) portable radios in use at the time.

Message-ID: <19970312143000.JAA28523@ladder01.news.aol.com>
Source record: 180676

Hi everyone. I would like a like help.

I just passed my Tech tests and am waiting to pull my call sign off the Call Book Server. However, they won't do me any good, cause I don't have a radio yet. So, I guess I need to get one and this is where you can help me out.

I would like some suggestions, feelings, opinions, etc. on various HT rigs.
These are some of the features I would like.
Daul Band 2m/70cm
AM 108-137Mhz Aircraft RX, (note: I am also a pilot, is there one that will TX in this range too)
MARS/CAP capable
5w
DTMF
Ctcss

Well, thats mostly what I am looking for, so any help would be appreciated.

6661. FT-920 IC-756 TS-570

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: hopewell@ctg.net
Message-ID: <858177818.22087@dejanews.com>
Source record: 180677

Hi gang,

I've been reading (with interest) all the banter on the newsgroups about the new HF radios. And I have an observation/question.

The IC-756 has HF and 6m and sells for $2200.
The FT-920 has HF and 6m and may sell for about the same, although no one really knows for sure yet.
The TS-570S has HF and 6m and sells for $1850.

Where did Kenwood get the ability to build the same radio as the other guys and sell it for so much less? Before you say something dumb like "Kenwood sucks," I'd ask you to compare the specs of each radio. The Kenwood holds its own against the IC-756 and the FT-920. Sure, it doesn't have that swanky purple (PURPLE?!) display with spectrum scope, but its display is excellent and (I may add) readable from virtually all angles. It has virtually the same features: two antenna ports, built-in memory keyer, built-in RS-232 port, etc.

Yes, the Kenwood's DSP is in the AF stage. But so is the ICOM's, I hear, and (it looks like) the Yaesu's. I own a TS-570D (no 6m, but same features otherwise) and I've spent a few hours fiddling with an IC-756. I don't see what all the hype is about with the IC-756. Aside from the display (which is not terribly clear and has a slow refresh rate), it's a pretty basic radio with DSP tacked on. The DSP controls have different labels, but they work similarly to the ones on the TS-570. A few other hams who were up at HRO at the same time I was, and had their first "hands-on" look at the IC-756, also went away wondering what all the hype was about
-- especially for $2200.

By the way, while playing with the IC-756, I tried really hard to use the spectrum scope to target potential contacts. But I found the refresh rate on it so slow that tuning to one of the peaks was an almost futile task. The only thing I can see it useful for is possibly as an indication of band activity. Try it, you'll see!

I've had my TS-570D for two months now and worked quite a bit of DX and stateside stations. The DSP is an incredibly effective tool against QRM and such. It has frequently

made the difference between a finished QSO and no QSO at all. In my opinion, the receiver (and everything else) in the radio beats the pants off the TS-850SAT I used to own, and the receiver specs (both Kenwood's and those measured by ARRL) seem to confirm that. The fact that the TS-570 has a dual-conversion receiver doesn't seem to make a difference in the real world or in the receiver specs.

So back to my question. How is it that Kenwood can build and market a product equivalent to the IC-756 (and maybe the FT-920) for so much less? What am I missing here? Are there some incredible features on the IC-756 that I haven't discovered?

If there are, I haven't missed them on my 570. I don't use 6 meters, and if any of you potential buyers out there don't think you will either, I'd recommend taking a hard look at a TS-570D. You can have an excellent radio and go away with 700 bucks in your pocket. (Or if you want 6 meters, buy a '570S and still walk away $350 richer.)

Sure, I'm biased. I own the Kenwood. But I did a lot of research before I made my purchase, and the IC-756, while not type-accepted when I bought my 570, was on the market and info was available. I compared its specs and price to the 570 and wasn't impressed enough to shell out a few hundred bucks extra. I'm still extremely happy with my purchase, and I've talked to quite a few other TS-570 owners who feel the same.

Just my two cents' worth, to be taken as such. It's your money; you may waste it as you wish.

6667. Re: Best DSP? Timewave DSP599zx?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-12 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5g6kfq$e72$1@geraldo.cc.utexas.edu>
Source record: 180683

Hello Damien, and all-

If you are on SSB and SSTV mostly, the 599zx is not your piece of cake.
They changed their NR mode algorithm early on to a type which has little
or no "phase roll" sound. Well, they were successful, but the resulting
audio sounds "mushy". (to everyone I've talked to anyhow)
On the up side, the 599's digital modes and continuously variable bandpass
are the best on the market. Hands down...no competition.
If you like general NR mode quieting, the NIR-12 folks pride themselves on this
mode.
I waited 6 months to get the 599zx..after selling my DSP-9 and then having to
wait while they got their "House" in order at timewave. I could not believe
my ears when I heard the NR mode on the 599...its all but useless. In fact,
I bought another HF rig just to get good NR mode performance (IC-756)...so
it cost me dearly in the long run. They claim that "most" people like the
new sound...OK..whatever...I have not met one yet. I wish they would
re-think that firmware...the chipset in that unit is capable of supurb
NR mode..(check the manufacturer's spec sheet). Hey guys, its OK to
backpedal a bit...admit your mistake...and issue an update that uses the
standard algorithm.

OK..I shot my mouth off. I just hope that we can have an interactive dialog
which results in the best possible product for us...and the best sales for
you. Heck, offer the old algorithm for those of us that like it!

Ok enough!

Hello All,
I an writing this to all new IC-756 owners to see if
folks are interested in starting a user's group here
on the net. I think there are issues that we might
want to address as well as information we should
gather and disseminate. I've asked Paul (KA6ATN)
if we can have some free server space to do this.
He has given me the "go" signal...and will soon
give me the info on how to set it up. If that does
not work out for some reason, we can simply set up a
mail reflector and exchange info that way.
Check out Paul's Ham site at www.repeater.org
(if it's down, check out his main site at
www.spring.com)

Please email me to add you to the list for this group.

Thanks + 73's

The signal comes into the DSP at the 15 kHz IF and is demodulated
within the DSP circuit. So yes it is an IF DSP but it also
accomplishes the demodulation and modulation chores for the IC-756

The only really annoying thing is the power button. If you throw the radio into your bag of stuff, it likes to turn itself on. I was told recently that yaesu is fixing that. I told my radio apart and cut about 1mm off the button (its long). Now its slightly recessed, and I'm much happier with it.

How many times have you noticed the grimy film on your computer screen and made a mental note to clean it? Are you reduced to making an "Ewwww" face every time you put on your glasses because of all those pesky fingerprints?

If you had the right cleaner, right there in front of you, chances are you would actually carry through and do something to improve the way you look at the world. Well, here's a simple suggestion to help you see more clearly and to banish smudges from your life.

Simply Clean Sensitive Surface Cleaner quickly and easily removes dirt, dust, greasy film, finger marks, crayon (how did that get there??), bugs, and other residue from your computer screen, glasses, camera lenses, binoculars, television screens, video equipment and compact discs. By lifting soils into suspension, Simply Clean leaves a bright, streak-free surface that acts as an invisible shield to help resist scratches, smudges, and water spots.

If you'd like to order the Simply Clean Sensitive Surface Cleaning System Kit for $19.95, send an email with your address and credit card information to prospectpl@aol.com. Or call 1-800-945-7723.

Each kit Includes:
(1) 2 oz. Bottle of Simply Clean
(1) 2 oz. Bottle of Simply Clean PS with Silicone
(1) 4 oz. Bottle of Simply Clean
(1) 4 oz. Bottle of Simply Clean PS with Silicone
(3) Simply Clean Lens Cloths (12"x12")

Shipping & Handling $4.00 for up to 3 kits

To learn more about this great solution for cleaning any optical or sensitive surface, check out http://www.simplyclean.com, where you can take advantage of our secure ordering option.

p.s. Simply Clean also works great on the windshield of your aircraft, boats, and recreational vehicles.

Hello, name here is Rick. I've developed a phone filter out of neccessity
when I started running an amplifier (And was messing the families phones up).
I made several different designs before ending up with the one I make now. I have been selling them to different hams that I talk with and one's that have found out about them through the grapevine. Anyway these things work if the RFI is entering through the phone line. You just plug them in the back of the phone that is getting the RFI and it blocks the RFI at that point. I get $16 each for them plus $3.00 for Priority Mail.

The appearance is as follows:

It is a tube 3.5" long and 1.5" in diameter.
On one end of the tube is a recessed RJ-11 female.
On the other end is a 3.5 in long flat cord with a male RJ-11 connector.
It consist of a tuned circuit of Toroids and Capacitors. The effectiveness
of the filter has alot to do with the spacing of these components on both the phone lines inside the filter housing. The circuit is suspended in this expanding self hardening foam to keep everything in place.
I have tested it on all the phones I have which is approximately 8. They range from expensive to Elcheapo. And it works on all of them while running my Amp. It even cleared up my Answering Machine which are usually the worst. I won't boast that it will clear up every situation cause sometimes it can be entering from other paths, like on a cordless or answering machine it could be coming in from the power supply or antenna. However if it's coming in on the phone line itself these filters are like a brick wall to RF on the phone line. Not sure about the amount of db Attenuation, I've read that a circuit similar to this has up to 70db of Attenuation. The only way I know you could make it work in a wall mounted phone is to take a short section of flat phone line terminated at each end with RJ-11's long enough to run from the wall plug
down into the filter and then back up into the phone. Keeping the section
as short as possible to prevent any further RF path.
If you have any more questions don't hesitate to ask.

73 de Ricky.

Hi Dave,

I am no repeater expert by any means, but from what I have heard and through my own personal experience, if the repeater is so equipped and is configured to allow for (and hence pass) it, it *will* work just fine.

Many of the 2M, 1.25M, and 70cm repeaters in New Hampshire use CTCSS and I have my ICOM T7A HT setup to use DCS on most of them simply because of QRM. Needless to say, it all works just fine. My home repeater (146.730) in Hollis, NH surely passes the tones through intact without stripping them.

Hope this helps.

A measurement procedure suitable for people at home
appears in Chapter 14 of 1995 to 1997 ARRL Handbooks.

Its a bit time consuming, but the author claims it can
be done with under $100 worth of parts and a
multi-meter.

I've discovered at least one method for obtaining non-reciprocity
between transmit and receive. Shift the frequency of a CIO/BFO with
a very lossy switch--perhaps a cheap transistor.

Brian Mileshosky, N5ZGT (n5zgt@swcp.com) wrote:

: Doppler is good until you start messing with multi-path (Where the
: signal is bouncing all over the place). That is when a regular beam
: and radio setup might be better.

Doppler has a bunch of other problems. This is NOT intended to discourage anyone from using doppler, just to recognize its limitations. Credibility check: I helped design the AN/SRD-22 doppler direction finder for Intech Inc for use by the US Coast Guard in approx 1975.

1. A doppler DF can only display the direction of *ONE* transmitter. If there are any other sources of signal (reflections, other xmitters, adjacent channel junk, computer noise, synthesizer spurious signals, harmonics of clock oscillators, ignition noise, images, etc) the reading will be erronious. Reflections is the real killer. A ground bounce mixed with a direct signal will yield horrible results. (Incidentally, the reason most dopplers have rather large antenna ground planes is to reduce ground bounce).

2. Switched doppler is susceptable to switching noise which acts as modulation sidebands. These sidebands (harmonics of the switching frequency) will cause strong adjacent channel signals to mangle the bearing. The typical "Roanoak" design is highly susceptable to this. Doppler Systems uses DGFet switches which have a much "softer" (less rise time) switching characteristic. Intech used a modified sine wave drive to literally modulate the PIN diodes instead of switching. It totally eliminated the problem, but sensitivity was reduced. PIN diode matching was very critical.

3. The typical vertically polarized doppler system does not work well with horizontally polarized signals. Building a horizontally polarized doppler is no major challenge, but nobody seems to have done it.

4. Doppler is sensitive to fox frequency. The doppler receiver measures the phase shift from the antenna to the FM demodulator. Any change in receiver system phase shift appears as a substantial directional error. The worst error is caused by the crystal IF filter. The phase shift from IF center to filter edge goes through radical phase changes. An AFC (automagic frequency control) is manditory to keep the signal in one place on the crystal filter curve.

5. Doppler is sensitive to rotation frequency and FM demodulator distortion. There two schools of thought here. Doppler Systems uses about 300Hz rotation frequency. This is good for insuring that the signal will remain in the IF bandpass (no AFC) but results in harmonics of the 300Hz in the bandpass. These harmonics cause bearing errors and linearity (approximation of a circle) errors. The typical commutating audio bandpass filter will not remove harmonics.

Intech elected to use 4.1KHz. Most of the harmonics are outside the IF bandpass. Combined with the PIN diode modulation technique, this yielded a very low distortion sine wave at the demodulator and very good linearity. However, the group delay (phase shift error) of the IF crystal filter was far worse at the edges (+/-4KHz) than it was near the center (+/-300Hz). AFC became manditory.

It turned out that the conventional balanced multiplier FM demodulator was also slightly sensitive to signal level. Since the AN/SRD-22 was both an AM (121.5 aircraft) and FM (Marine VHF band) receiver, an ALC (automagic level control) was used. There error here is not large and can be probably be ignored.

6. Doppler is sensitive to modulation audio. The response time of the doppler DF is totally dependent upon the Q of the doppler tone bandpass filter. The wider the bandwidth, the faster the DF. If you make the filter too narrow, it takes forever to get a bearing. However, too fast and FM audio modulation and fox tones will leak through the filter and mangle the bearing. One favorite trick is to use a 300Hz fox tone to mess up the Doppler Systems DF'ers.

7. Doppler antenna patterns are very sensitive to nearby antennas and reflections. The AN/SRD-22 had to be mounted at the very top of the mast. Unfortunately, almost every other piece of electronics equipment wanted to be in the same place.

On the roof of a car, the AM/FM antenna and other radio antennas create horrible errors. Nearby antennas from other hunters at the starting point will mutilate the pattern. This is why the DF book says (several times) that the ONLY way to get a decent bearing is while moving. Moving tends to average out these errors. While the error at a given location may be severe, a few feet away might be perfectly acceptable. The trouble is you have no idea where there is a reflection free location. Moving while DFing is the only way.

73 Magazine carried a series of articles in the HomingIn section based on rotating yagi and quad antenna direction finding. This is basically an AM (signal strength) system. The difference is that you can easily see multiple transmitters, recognize reflections (they tend to blurr), do NOT require an AFC, and have an easily controllable antenna pattern (using boresight calibration). However, driving down the

freeway with a spinning 4 element quad is a great way to
attract the constabulary. Short transmissions are also
difficult to see. Equipment complexity is about the same.
Having dealt with doppler professionally and recognized its
limitations, I'm partial to a rotating antenna.

One place where a rotating antenna is far superior to doppler
is tracking a jammer. With a jammer, you have *TWO* signals
on a frequency (the person trying to talk and the jammer).
A doppler DF will yield a bogus direction because of the two
signals. A rotating antenna will show both.

I hope this helps. If there are any questions, please email.

==========
Use Dejanews - search on the email address of the person you intend a
deal with. You _might_ learn about previous complaints against the
person, if they were posted anywhere on usenet. You will also learn
how long the person has been active with that address, which can be
useful in judging credibility.

Complaints such as yours would not show up, because you did not
include her email address.

I always try to know just who I am dealing with, and have the address
and telephone numbers. If the person declines to give me their
home/work addresses, I have to wonder why - though sometimes there is
a valid reason for this, and I will let him/her explain.

In the case of a ham, the QRZ database will often give you a home
address that can be used to verify the address you are given, and the
FOUR11 internet phone book can often do the same. Some of the Phone CD
databases will let you do reverse searches based on just the number -
FOUR11 used to.

Checking the above can give you some indication, but of course, there
still is a matter of honesty and trust.

Hi! Here's an interesting proposition:

I have an absolutely mint Yaesu FT-1000MP with matching SP-8 SPKR, extra 250, 500, 2.0 filters, which I think I'd like to trade for an equal Kenwood TS-950SDX w/SPKR, in same condx.

When I went shopping, I Almost bought the Kenwood instead, but the Yaesu was more alluring; almost everyone said to go for the 'MP, newer technology, etc. But now I find I miss my '940 (which I sold in the process), and would be willing to give up the 'MP for the chance to actually play with a 950SDX (I've never actually seen one in person!).

Any Kenwood '950SDX guys out there curious/thinking abt getting an MP?
Easy no-hassle trade could work for us both.
SDX only, not the SD, please.

Thanks for reading this.

6697. PELCO pan-tilt as AZ-EL rotor.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: FoxFox7@aol.COM
Message-ID: <970313105440_510792252@emout03.mail.aol.com>
Source record: 180459

I am experimenting with using a Pelco heavy duty pan-tilt unit as an AZ-EL positioner for EME. The unit was designed for positioning large outdoor TV cameras for surveilence purposes. The gearmotors are operated from 115VAC although some units are 115VDC and others are 24VAC. The gearmotors activate a chain drive, which turns a large worm gear. This worm works against a large, thick, Boston gear and thats what is coupled to the output. Both pan and tilt drives are identical. There are limit switches provided that can be set at any point, both for left-right and up-down limits. I am presently adapting two 500 ohm pots to the drive gears for position readout. Thsi was provided by Pelco for this purpose as a Kit.

This setup seems to have pretty good potntial, and is quite heavy, but don't know really how it will handle the destructive wind loads.

Has anyone else done any work with these devices?

There is a smaller unit which looks like a natural for sattelite work.

Or you might try another approach. Buy a Timewave 599 *and* a JPS
NIR-12 and return the one you don't like. We offer a money-back
guarantee at JPS and so do many of our dealers. Then you don't have to
decide whether to believe the hype on Timewave's web page - you can
decide for yourself.
When everything is said and done, the main issue is not which unit
has the flashiest front panel, or the most lights, or the the most
knobs, or which DSP chip, or even how many DSP chips. The most
important thing is whether the DSP makes a usable addition to your
station, and helps you make and enjoy more QSOs. It should be easy to
operate and easy to hook up. It should provide solid, useful reduction
of noise and interference for the modes you're interested in
operating.
Obviously I'm biased, since I designed the NIR-12, but when it
comes to useful enhancement of noisy speech (with true improvement in
intelligibility, not just reduced bandwidth), I don't think there is
anything that beats it. It's the only unit anywhere that has two
different types of broadband noise reduction for SSB.

Cliff is correct, the LPL loop is going out of lock. Just grab the
service manual, a good DVM and set the voltage by bending L30 I think
on the PLL board so the meter reads 1 volt. Sorry I do not remember
the actual test point though. It is Very doubtful it is the chip you
mentioned is in trouble.

Carl,

There never was any sort of computer control for the IC-701, 211 and 245 radios. The connections were for the RM-2 remote controller. The RM-2 had its own microprocessor.

Those radios were produced before it was popular to control radios from a computer. You might look around for a RM-2 controller, they show up at swap meets.

I do not think your are correct on your ASSUMPTION. Less than 1 percent of what has been sold has given any trouble at all and that is usually because the owner can not keep his hands out of it. There are a great many thousads of the IC-706 in service now.

And maybe people are tired of the "Price Police" criticizing the pricing,
so they don't list a price. They just wait for e-mail inquiries and respond
by private correspondence instead of subjecting themselves to a whining
group of "your price is too high" experts.

I've recently had a bad experience selling ham equipment over the internet, and I was wondering if anyone maintains a list of rip-off artists who agree to but equipment, but never send the money after you've already sent them the equipment (or vice versa).

If you know of such a list, could you please email the URL to me?

my address is:

jbrower@voicenet.com

BTW, just in case you wanted to know what happened to me, I sold a Kenwood TS-520S to Susan Driggers, KF4OBL for $300. I sent her the radio, which was in fine working condition, back in November. Here it is March, and I still haven't seen a dime from her. Apparently she got "laid off" from her job right after I sent her the radio, and couldn't afford it anymore, which in itself is fine, but the problem is that she never sent the radio back to me!

If you have been ripped off by her too, please let me know.

J. Brower, N3OAB
to reply to me via email,
remove the "nospam" from my address.

> 35-50 watts. Look for the MK..... coming soon.

This phenomena is really making me hesitate buying Icom's radio. It's because I really can't tell whether they are doing us ham a favor in fixing bugs, doing improvements, or to drive the rigs out of date as soon as possible. The life span of IC-706 has been less than 18 months! One can expect that a replacement will come out, if there is one, in less than or equal to that time frame. That's why I call the IC-706MkII as IC-706Mk(N+1). =

Put it this way: =

If a product is buggy and now a fix is out, shouldn=92t the manufacturer liable to develop a plan for a possible "UPDATE Path"?

I think that, in the IC-706Mk(N+1) situation, users should allow an "UPGRADE Path". If I were an IC-706 owner, I wouldn=92t mind at all to pay a *RESONABLE* amount of money to get the old guts out and replace it with the latest and greatest. After all, it=92s just an optional part to=

make a win-win situation! Customers get the best of what they buy and manufacturer makes the money. Look at the computer software industry or even hardware industry=85 The result is understandable. Customers, lik=
e
me, will continue to be loyal to their most favorite company. Simply because I know that it (the company) stands behind its products.

Go back to my introduction. I thought I was going to buy an IC-756 after I get my tax money back. Now I think I'll wait to save more and switch to FT-1000MP because I can=92t tell whether they=92ll come up with=
an
IC-756MK(N+1) to drive my possible new rig out of the picture or not. =

The way they do it will ultimately hurt the company and us. =

Luckily enough. I don't have the budget to buy the IC-775DSP. The next generation of this rig will probably be called IC-775DSPMKII. How about that?

Just my personal opinion. Please don=92t take it too offensively. I kno=
w

there are "FANS" out there.

Best 73!

I'd be interested in knowing how these separate DSP units compare with the DSP that comes built into some of the newer rigs like the TS870S or the FT1000MP. Is it worth having both?

No Digital Coded Squelch is a Digital word that is transmitted.
Generally the radio must be direct FM modulated to work correctly,
many amateur FM transceivers are phase modulated so Digital Coded
Squelch will not work due to the shaping of the transmitted audio.
Also a DCS system sends a turn off tone, I think of 137 Hz so the
receiver in the other radio squelches again after the transmitting

station is finished transmitting.

No the commands are correct except for one and that addendum should
have been included with your radio, if not contact ICOM for it. Many
software companies are not haveing troubles with wrong commands in the
R-8500.

I would say there are NO Bugs in the original unit, but ICOM listened
to suggestions of users and built a new radio to accomadate them.

The above statement hits the NAIL on the HEAD. That is exactly what the display does, no more no less it is designes to display band activity. It is not a pan adaptor, it is not designes to show trapzoid patterns, flat topping etc. Now with the other radios on a quiet band you will need to tune around, with the 756 you can see +- 100 kHz around you.

You need to go thru a coast station (via radio) who would then connect
you to a high seas operator and the call via landline would be
connected.
It isn't cheap though. It is a commercial venture.

Just purchased the fas-2/70, and it works okay, slighty better on 440 than
2 meters. I use it for close in work near the repeaters, and also for
remote using my mobile radio. overall it is a neat little antenna that
works okay on the ft50, with it screwing in just like the factory
antenna.You will loose some gain on the 2 meter freq, and some on 440.
overall still good compact antenna.

Here is some QRP stuff you might be interested in....

Welcome to the Internet QRP mailing list!

CONTENTS:

1. Introduction
2. The Essentials
3. Common List Server Commands
4. QRP-L Unique List Server Commands
5. FTP Archive
6. WWW HyperMail Archive
7. QRP-L History

1. INTRODUCTION

The QRP mailing list is open for discussion of any subjects
relating to
low-power amateur radio operation. Example topics: portable
operation,
equipment design and construction, solar and battery power, QRPp,
contesting, kit building, ... There is one topic that should not
be
discussed on QRP-L: The Dayton HamFest. There is a separate list
for
that: DAYTON-L@Lehigh.EDU.

2. THE ESSENTIALS

* COMMANDS TO THE LIST SERVER

Must be sent to listserv@Lehigh.EDU in the BODY of the mail
message,
not in the Subject: of the message. Leave the Subject: blank or
type
in an "X" if your system requires.

* POSTING TO THE LIST

Messages you wish to have distributed to the list must be sent to
qrp-l@Lehigh.EDU.

* OTHER STUFF

A copy of this file is available in QRP-L/WELCOME.TXT. Hopefully
an
up-to-date Frequently Asked Questions (FAQ) file will soon be
available
to supplement or replace this file. Watch for an announcement on
the
list.

Please keep your mailing address up to date. If your e-mail
address is
to be changed please unsubscribe and resubscribe from the new
address.
If your mail bounces for 'no such user' or 'no such machine', you
will
be removed from the list. Please try to subscribe from a system
that
doesn't send periodic 'I couldn't deliver the mail for 1 hour/3
hours/
1 day/etc.' messages as it makes it that much more difficult to
manage
the list.

Please do *not* send subscribe/unsubscribe requests to the entire
list.
If you are having problems, send email to:

Jim Eshleman <lujce@Lehigh.EDU>
or
Chuck Adams <adams@sgi.com>

3. COMMON LIST SERVER COMMANDS

Remember, all these commands must be sent to listserv@Lehigh.EDU in
the
BODY of the mail message, NOT in the Subject: of the message.

* GETTING ON THE LIST

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your
callsign,
if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

* GETTING OFF THE LIST

UNSUBSCRIBE QRP-L

* SUBSCRIBING TO THE DAILY DIGEST

If you'd rather receive one e-mail a day containing all the
postings
with a table of contents at the beginning, use this command after
you
have subscribed to the list. Warning: The daily digests are
large.
You also use this command to start receiving digests again after
having
postponed your subscription.

SET QRP-L MAIL DIGEST

* POSTPONING YOUR SUBSCRIPTION

If you're going on vacation, or you just want to stop receiving
QRP-L
for awhile but still want to remain a member of the group, use
this
command. You'll still appear on the recipients list, but will
receive
no mail.

SET QRP-L MAIL POSTPONE

* RECEIVING INDIVIDUAL POSTINGS

Use this command to start receiving individual postings after
having
subscribed to the digest or postponed your subscription. This is
the
default set when you first subscribe to QRP-L.

SET QRP-L MAIL ACK

* GETTING A LIST OF SUBSCRIBERS

Use this command to receive a list of all QRP-L subscribers. The
list
includes each subscribers name, e-mail address, and call.

RECIPIENTS QRP-L

* OBTAINING A FILE INDEX

To receive a list of all QRP-L related files available via the
list
server, use this command. Note that all the files are also
available
via the anonymous FTP server at ftp.Lehigh.EDU.

INDEX QRP-L -ALL

* RETRIEVING A FILE

Use this command to retrieve a file via the list server. If the
file
is a binary file it will be UUEncoded before being sent.

GET QRP-L/subdirectory filename

For example, to retrieve the daily archive (all the list
messages) from
April 6, 1993 use the following command:

GET QRP-L/ARCHIVES/1993 930406

* SEARCHING THE ARCHIVES

You can search the list archives (files) for a "regular
expression"
pattern. If you don't know what that means, you can just specify
a
word. All files in the specified archive (directory) are
searched.
While the search is case insensitive, the server seems to have
trouble
at times with uppercase letters in the pattern, so please use all
lower
case characters. The output returned to you just shows the lines
in
each file that matched the pattern. You then have to GET the
file(s)
you want. Send a HELP SEARCH command for more information.
For example:

SEARCH QRP-L/ARCHIVES/1995 "^subject:&administrivia"

returns the following output:

Matches for pattern ^subject:&administrivia ...

--- Archive: Archives (path: qrp-l/Archives/1995)

>>> File 950522:
Subject: Administrivia
<<< End of matches in file 950522

>>> File 950525:
Subject: Administrivia: Digests
Subject: Administrivia: lost mail
Subject: Re: Administrivia: lost mail
<<< End of matches in file 950525

>>> File 950601:
Subject: Administrivia: Digest format
<<< End of matches in file 950601

* OTHER LIST SERVER COMMANDS

For more information on all the available list server commands, try
sending the following:

HELP
HELP TOPICS

and for more detailed information on a specific command, like GET:

HELP GET

4. QRP-L UNIQUE LIST SERVER COMMANDS

* OBTAINING A QRP-L MEMBER NUMBER

Use this command to obtain a QRP-L member number.

RUN QRP-L X GETNR callsign

where "callsign" is your callsign. Use the word NONE if you don't
yet have a callsign. The list of assigned member numbers can be had
via the command:

GET QRP-L/MISC MEMBER_NUMBERS.TXT

* RECIPIENTS SORTED BY CALL AREA

This command runs Smitty's qrp_call program, which returns a report of
QRP-L subscribers sorted by call within call area.

RUN QRP-L X QRP_CALL

A PC version of the program is available in
QRP-L/TOOLS/QRP_CALL.ZIP.
It uses the output of the list servers RECIPIENTS QRP-L command as input.

* GREAT CIRCLE DISTANCE

You can compute the great circle distance between a pair of Lat/Long
locations. For example:

RUN QRP-L X GC 40.3476N75.2046W 32.4700N96.4800W

returns:

Bearing is 252 Degrees for 1130 Nautical Miles = 1300 Miles = 2092 Km

* LOOKUP A CALL IN THE FCC DATABASE

RUN QRP-L X FCC_CALL callsign

where "callsign" is the call you wish to lookup.

* GREAT CIRCLE DISTANCE BETWEEN TWO CALLS

RUN QRP-L X CALLS2DIST callsign1 callsign2

For example:

RUN QRP-L X CALLS2DIST N3VXI K5FO

returns:

N3VXI ZIP = 18055
K5FO QTH = ADAMS, CHARLES N
BOX 181150
DALLAS TX 75218-8150

N3VXI Lat/Long = 40 34 46 N 75 20 28 W
K5FO Lat/Long = 32 47 00 N 96 48 00 W

Output from "gc 40.3476N75.2046W 32.4700N96.4800W":

Bearing is 252 Degrees for 1130 Nautical Miles = 1300 Miles =
2092 Km

5. FTP ARCHIVE

The anonymous FTP archive at ftp.Lehigh.EDU in pub/listserv/qrp-l
mirrors
the files available from the list server. Or use a WWW browser:

ftp://ftp.lehigh.edu/pub/listserv/qrp-l

Note that files are compressed, i.e. end with .Z, but if you ftp
without
the .Z extension, the file will automatically be uncompressed.

6. WWW HYPERMAIL ARCHIVE

You can read the postings to the list via the URL:

http://www.lehigh.edu/lists/Archives/qrp-l

7. QRP-L HISTORY

This list was started by Chuck Adams,K5FO,(adams@sgi.com) by an
announcement on the rec.radio.amateur.misc USENET group in early
1993.
Bruce Walker, WT1M, maintained the mailing lists and FTP area from
then
through August 1994 on a system at Thinking Machines Inc,
Think.COM.
Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks
to
Mike Ardai, N1IST, for all his hard work during the time that QRP-L
was
on netcom.com.

Chuck is still the keeper of the non-electronic archives, including
copies
of some schematics, etc. Contact him directly or watch this list
for more
info.

LASER POINTERS FOR SALE AT HAMFEST PRICES FROM KD9XF

LASER POINTERS FOR SALE $37.95 plus $3.00 Shipping and Handling anywhere in the U.S.
No shipping/handling charge on orders of five or more!

MAKE YOUR POINT WITH A LASER POINTER!

Compare to pointers from Sharper Image/Radio Shack et al at $49.95, 79.95 plus; AND these are BRIGHTER and operate at lower power.

This is a high quality laser pointing instrument. Slender and elegant, this full-size professional-quality laser pointer will bring you up-to-date with style. Enjoy a high-tech image that commands respect. Stand anywhere in a room and point with ease to any screen or object. Precision engineered for long life and durability. All metal, no plastic, handsome case. Makes a great gift! One year warranty.

This instrument has a 650 nm (nanometer) wavelength making the beam much brighter than the common 670 nm pointers. If you check, you will find that the vast majority of laser pointers on the market have a wavelength of 670 nm. As a rule, the lower the number, the brighter the beam (and the more expensive the pointer).

Check with retailers such as Radio Shack, The Sharper Image, Brookstone etc. You will find that their pointers are almost all of the 670 nm variety. If you can find a place where they have a bonafide 650 nm and a 670 nm pointer, compare them side-by-side. You will see a remarkable difference. You will also discover that many retailers do not know the specifications of the pointers that they are selling. The current Edmund Scientific catalog offers a 650 nm pointer for $57.50.

Additionally, you will discover that the commercially available pointers (the vast majority of which are of the 670 nm variety) are selling for $49.95 and up! The average price is probably somewhere around $69.00. Check this out!

Our pointers therefore are a significantly BETTER VALUE; a brighter, more visible light, for LESS money!

It should be noted that the on/off button is located near the front of the pointer. Some laser pointers incorporate the switch into the pocket clip at the rear. With the button near the front it is easier to hold the beam steady on a screen.

These are useful for teachers, students, lecturers, real estate agents, contractors, warehouse personnel, law enforcement, sales personnel,

sports/outdoors people, and in virtually any environment where one has to point out something to someone else.

These are not toys. They are NOT intended for use by children. They should not be pointed at people or pets/animals.

Specifications:

Length: 5 inches (127 mm) long
Diameter ½ inch
Weight: 1.5 ounces (40 g) with batteries
Batteries: 2-AAA (included)
Voltage output: <3 Mw
Wave length: 650 Nm
Color: Black with gold tone pocket clip
Beam color: Bright Red Dot visible at 1500 feet and more

For more information or to find out how to order, e-mail: jennings@theramp.net (Al Jennings)

I too think that you are mistaken. The IC-706 is a GREAT radio for
what it is designed to do. I've had mine for over a year and love
it.....never had ANY problem with it.

hardline is very good stuff. I use it on both 2mtrs and 432. I use homebuilt matching sections fabricated from copper pipe and brass tubing. I got hte plans from an old 73 mag. article. works very well at power levels of up to 1.5 kw on 2mtrs. and 500 watts on 432.

This is the kind of noise you need to ignore when on
a newsgroup. It's nothing more than noise.

I and many of my friends have Icom 706 radios that
are in heavy operation with a spectacular results. That
if from hams who have the radio and like it. Not
someone sniping.

Hi Bob! I have never used a TS940, but know it is a good radio and many contest stations still use them. However I would suggest also looking into getting a used TS850AT. With all the new rigs coming out, the prices of used TS850 and many other rigs have plummeted. It would not be hard to get a mint TS850AT for around $1100. The TS850 has a reputation for having a top notch receiver, typical Kenwood high quality audio, and being very reliable. I have heard of reliability problems with some TS940 rigs and people looking to buy one are looking for the very last ones made. The TS850 however does not have a built in power supply or any cw filters standard like the TS940 does. I have a TS850AT and a FT1000MP both operational in the shack. I really like the performance, DSP, flexability, and all the bells and whistles on the FT1000MP. But when it comes down to basic receiver performance, the TS850 can hear any signal the FT1000MP can. Good luck on your quest!

NO bugs in the original unit thats quite a laugh!. First it was advertised to receive to 200mhz which it did not. That was changed after people bought it. Then the loud fan on receive, then the microphone audio, ect... Basically its bugs helped create the Mk II.

6753. For Sale: Kenwood TH-78A Dual Band HT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC

I have a Kenwood TH-78A dualband HT for sale. It's in great condition, both physically and operationally. Just got the urge for a new HT, and bought an ICOM IC-T7A.

Package includes:

TH-78A (the radio)
BC-15A (desktop charger)
PB-13 (battery)
PB-13S (battery)
Manual
Belt clip
Carrying strap
Original box

The PB-13S battery is a high-capacity battery.

I am asking $300, or make offer.

You can email me at bgwatson@earthlink.net or phone me at 510.676.8239.

Thanks for your interest!

Can it's frequency be read/set via an interface in real-time (not just
download/upload)?

6756. FS CW STATION IDENTIFIER

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: ka2qep@webspan.net
Message-ID: <5g9hp8$96g@news.webspan.net>
Source record: 180610

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282 Fax 610-588-0282. Or email n2gkw@epix.net

Hi all,
I am looking for a circuit diagram and PCB layout for a linear
amplifier suitable for two metres, FM and SSB.

I would like to build one that does not involve valves and all the
hardware that goes with them.

What I would like to do is end up a linear amp that I can control or
vary the final power output and has a very reliable preamp, so that
no signals are lost.

If anyone can help please get in touch with me and I will get back to you.

I have a Yaesu FT 290R which has a maximum output of two watts.

I look forward to hearing from any of you.

All the best

Paul G1CQX

: Carl,

: There never was any sort of computer control for the IC-701, 211 and
: 245 radios. The connections were for the RM-2 remote controller. The
: RM-2 had its own microprocessor.

I know there was no IBM interface made by ICOM for the IC-701 but it
can be controlled by an external source. I want to make my own
and need to understand how the accessory connect accepts commands
from a device like the RM-2 (format used).

Maybe I should be asking what is the commands or information the RM-2
remote controller is sending to the accessory connector? The radio
can be controlled from any external device via this connector as
long as you know the format used to control the radio by this connector.

So with this information and a willingness to build a an interface to
send the appropriate information to the connector that will send the same
commands that the RM-2 does. Now you can write your own software to send
frequencies the radio, change bands, scan, etc.

What is the format used by the RM-2 to send data for controlling the radio
including what data controls what (scan, band change, etc)?

: Those radios were produced before it was popular to control radios
: from a computer. You might look around for a RM-2 controller, they

Hello,
A friend of mine has an older SYNTOR on 2M. He wants to get it programmed for local repeaters.
The radio has a generic prom in it now. It's part number is SN82S129N. Unknown if this is a Motorola part number or another vendor's. It was referred to by Motorola as an early generation "flash prom". The top has no particular color.
The radio is an older, trunk mount, SYNTOR, model T83SRA3200AK. It's on ham 2M freqs now so no tuning required, just the PROM change.
If you know of anyone who can supply the PROM, programmed. Please let me know.

Thanks for reading.

>Help-
> Does anyone out there know how to program the transmit offset
>on this handheld?? Mine is set to 560 KC now, need to set it to 600.
>Help would be greatly appreciated. Thanks.

1. Press the Function and Set (5) buttons together, then press the Up/Scan (#) button until you see the offset of 560 kc and a flashing "OW" below it.

2. Then simply use the Main Dial to set the repeater offset to whatever you want.

3. Then press the PTT or CL.S.Stop/M>VFO (A) button once to save it and exit the setup mode.

There is a separate repeater offset for both the uhf and vhf bands. Make sure that you are operating on the correct band first before setting the offset. Just press the V/U/Split (C) button until you are.

Hope that helps - Steve.

6768. Equitorial C-200: Antenna Tuner?

I recently purchased a used piece of equipment that I think is an antenna tuner. The manufacturer name is Equitorial (Mountain View, CA) and the model number is C-200.

Anyone one know for certain what this is?

6769. FT-10R: Squelch Problem?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: Kenneth M Gianino <ken@notify1.com>
Message-ID: <33287298.64DA@notify1.com>
Source record: 180623

Is anyone having a squelch problem with the FT-10R? Noisy signals that open the squelch normally, sometimes leave it in a confused state. One or two s-meter segments with remain active and the radio will remain unsquelched. I have the least expensive 16-button keypad.

Wrapping my fingers around the antenna or just touching the tip of the antenna will cause the phantom signal to disappear and allow the radio to squelch. It is almost as if the radio is "jamming" itself with low-level, broadband noise when it is unsquelched. It does not, however, do this when the squelch control is opened and closed manually.

I'm assuming the radio has an automatically extended "squelch-tail" for weak signals, which is why it never happens with strong received signals. Since the culprit noise seems to be entering at the antenna, I need to try this with a distant, external antenna. Any words of wisdom?

I called the Yaesu service department to see if they might be aware of a problem, but they were not. (Although Yaesu has been quite good about service, it has to be a pretty MAJOR production problem before anybody admits anything.) I've found that radios (any manufacturer's -even the great T**-T**) sent in with esoteric problems usually come back stamped: No Trouble Found!

It's more than one. I don't have either the rig or manual at this
location yet, they are with the programmer, but I'll detail what
was different as soon as I can.

Maybe I'm picky, but I called ICOM to verify the manuals, and
specifically
asked for addendums or changes, and was told there were none.
Much hair pulling later, they remembered this tech manual with
what they called "the old codes" and claimed the manual
documented the "new codes".

All I know at this point is the programmer is running just fine now,
and I expect a beta version probably next week.

stay away from the 940 as many parts are no longer offered by kenwood

prices on 940 have really gone down. Readout is most common fault

and parts to fix can t be found.

Does anyone have an opinion about the W&W Associates MasterCharger Ia?

I has exchangable charging cups, so it should work with whatever HT I
happen to buy, and claims to use delta v and delta T/delta t charging
regulation, which should be optimal, right?

Also any experience with their branded battery packs?

Maybe someone can post the commands from an R-8500 manual, so I can see
if the R-7100 uses a subset of those commands?
(or even better: the R-7100 commands as listed in that Icom ref manual :-)

6777. $$$WANT TO MAKE SOME MONEY???$$$

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: Rick Turcotte <fnturcot@accessus.net>
Message-ID: <01bc2ff6$0acb7ee0$6681cecf@turcotte>
Source record: 180631

Want to get easy money????

Yeah, there's no "free lunch" but there's a money you can get easily if you know how.

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of

$5.00! So I thought ,"Yeah, right, this must be a scam", like most of us, but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups.(There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161)and they confirmed that it is indeed legal!

Than I invested the measly $5.00.....

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it end soon, and didn't give it another thought. But the money just coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have

made a total of just over $42,000.00 and it's still coming in .....

It's certainly worth $5.00, and 5 stamps, I spent more than that on the lottery!!

Let me tell you how this works and most importantly, Why it works....

also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PREFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Michael Henry

518 West College Ave.

Salisbury, MD 21801

#2 Philander Chiu

581 9th St., APT #5,

Davis, CA 95616

#3 David West

6020 Danube Way

Orlando, FL 32807

#4 Daniel Trudel
9 Pilon street
Evain Qc. Canada
C.P. 798
J0Z 1Y0

#5
Eric Turcotte
4 Michelle Dr.

Mascoutah, IL 62258 USA

STEP 2: Now take the #1 name off the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS,

1) Click on any newsgroup, like normal. Then click on "To News', which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS'button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT" which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!!

IF YOU'RE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to cpoy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

NEXT

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST' . It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it , it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**

That's it! You will begin receiving money from around the world within day's! You may eventually want to rent a P.O.Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200with my name at #2 and only receive 5 replies each,

I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who're joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money. And for those name you send the money they will make you on the mailing list it means they will post the email like that with your name on the list!! GOOD LUCK to all and please play fairly and reap the huge rewards from

this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with you name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone Ii talked toknew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world with costing anything but our time!!! YOU also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

6778. HAVE: Shottkey Diode F/Mixers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5g9tuk$7e6$1@geraldo.cc.utexas.edu>
Source record: 180632

Hello All,
In going through my stuff last night, I came across a project I had forgotten about. About 3 years ago, I bought 300 Shottkey diodes and sorted them by "forward drop" (Whew!) into matched sets of four. I assembled them into envelopes with instructions (general) for how to change the mixer diodes in your rig's first mixer and/or product detector.I have a list of the rigs that use discreet diodes and that is there too.I'll post this list tomorrow, and Heck-I'll send a set out to anyone who is interested who sends me an SASE and a buck (to pay for the cold drink I'll need after walking to the post office. Ha!)
My friend's rigs on which I changed the first mixer's diodes, all were thrilled with the better-lower noise floor. It's the cheapest way to make a good rig even better.
I've got about 35 sets left.

Just thought I'd offer.
(its revenue neutral for me)

I said "over" a couple of days ago on a repeater :) But I also use
satellites alot too so it's kinda a burnt in habit that I need to
check myself on. Who cares that it's a roger/over beep or a
courtesy tone? I don't, but they sure sound like they have the same
purpose and that's to let the other person know they can talk or for
somebody to know they can break in and use the freq. Get over it!

I recently bought an L4B amplifier that is missing the filament transformer. I bought a new one (ouch!) but I need info on how to hook it up. I know where to connect the xfmr input leads, but where do the 2 blue leads and the yellow lead connect? I believe one blue connects to the meter board and one to the tie point at D2. Is this correct? Also, there is a blue lead coming from pin 4 on the power/control input connector that is disconnected. Am I correct in thinking that it connects with the green wire from the transformer to the 4-position terminal strip? Also this amp has a history of blowing the filament xfmr after about a months use, this happens while turned on but not being used. Any ideas where the problem may lie? I'll appreciate any help or ideas. Thanks John N0EE

Dick,

I don't know about the programming part, but ALLTRONICS of San Jose, CA
lists the 82S129 PROM in their current catalog (#961) for $1.99/ea.

The URL for their on-line catalog is:

http://www.alltronics.com

BTW, the same chip is used for the Motorola MCX-100 radios.

6791. FT767 PLL Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-13 00:00:00 UTC
From: "Dale R. Parfitt" <par@magg.net>
Message-ID: <3328AFF6.25E9@magg.net>
Source record: 180645

I have owned an FT767 for about a year. When I got it I noticed that tuning CW sigs was annoying because of a very discernable click each time the freq changed by 100Hz- a louder click when the counter changed in the KHz position. 2X to Yaesu and now they tell me this was an artifact of the PLL in early models. Later models still had this but less noticeable.
It is hard for me to believe a mfg would put out such a rig. Anyone else have this problem?

Kiss your radio (and the money you'll never see) goodbye and chalk it up to a bad learning experience.

Trading over the internet tips:

When selling, ship COD (cash on delivery), accept only money orders or cash (never a personal check). Retain the shipping number from the waybill, and insure the package.

When buying, inspect the package in the presence of the delivery person if possible before signing for it and handing over your money (if COD).

Confirm your order with the person via the telephone. Trust your gut... if you have any doubts about this person, drop the deal and hope a more honorable person to do business with comes along.

I've done some trading over the internet in the past, and so far so good -- no one has burned me. A little common sense is all it takes.

I actually was referring to the 706-MKII with a bit of
jocularity in this post, but neglected to put the MKII
in the title line.

There are local knowledgeable individuals whose opinion I
respect who offer nothing but praise for the 706. I wouldn't
be above buying one myself, but there is a modicum of truth
to the fact that modern Japanese radios are subject to the
difficulty of obtaining proprietary parts once the item is
discontinued.

Best of success and enjoyment to all those who spring for
the MKII.

Hello all...

I have a Butternut HF6VX Multiband Vertical Dipole for sale. Here are

the specs for the antenna:

Shipping weight: 12 lbs/5.4 kg

Height: 26 ft/7.8 m

Feedpoint impedance: Nominal 50 ohms with included

matching line.

SWR at Resonance: 1.5 or less--all bands.

SWR bandwidth for 2:1 or less: Entire 10, 15, 20, & 30 meter

bands; 250-300 kHz on 40 meters,

30-100 kHz on 75/80 meters.

Power Rating: 1500 watss PEP 80-10, 400 watts

PEP on 30 meters.

Wind loading area: 1.5 sq ft/0.15 sq m.

I am only asking $135.00 for it, and that includes shipping via UPS

Ground. Money Orders will ONLY BE ACCEPTED. No C.O.D. or personal checks allowed. When I accept the money order, please include your home telephone number so I can call and give you a UPS Shipping Code so you can track it via UPS if so desired. Thanks for all who read this in advance....

6806. Satellite Antenna/Rotor

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: jtpjatae@bicc00.bi.ehu.ES
Message-ID: <3.0.1.32.19970314153343.007ca670@bicc00.bi.ehu.es>
Source record: 180408

I am considering to purchase a rotor and antennas for satellite operation:
Here are some of my caveats (I am not an expert):

1) Antenna Choice: I have been searching for antennas for satellite
operation and I have found these posibilities:

Cushcraft: $200+$190=3D$390 (no crossboom included)

22XB 144-148Mhz 22el. 14dB
738XB 432-448Mhz 38el. 15.5dB

With built-in polarity switch.
Boom of 6063-T832 =BF? Aluminium
Stainless Steel Hardware
No crossboom

Hygain Telex: $400

Oscar Link with
216AT 144-148Mhz 16el 11.5dB=09
7030AT 432-448Mhz 30el 14dB=09

With built-in polarity switch.
Boom of =BFAluminium?
Stainless Steel Hardware
Fiber Glass crossboom included

KLM

Small Oscar Set: $400
2M-14C 144-150Mhz 14el 11dB
435-18C 420-450Mhz 18el 12dB

With built-in polarity switch.
All stainless steel
Fiber Glass crossboom included

Large Oscar Set: $500
2M-22C 144-148Mhz 22el 13dB
435-40C 420-440Mhz 40el 15dB

With built-in polarity switch.
All stainless steel
Fiber Glass crossboom included

My conclussions are:

-There is little difference in price...
-Cushcraft seems to have the highest gain.

-I have not VSWR data for all the antennas/band
-KLM is the only one with a steel boom, is this a real important point?
-Not all the systems covers the Spanish (European) whole bands:
144-146Mhz/430-440Mhz. Only KLM...

So the best purchase should be the KLM small set (in it's price category)
or perhaps the Cushcraft.

Any comments, advices or (good or bad) experiences with these antennas?

2) Rotor Choice

This is simpler, the only (I haven't found other) possibility in
azimut/elev. is the Yaesu 5600B. I have been told that sometimes it is
possible to get almost the same thing with Kempro (is this rigth?). There
are sometimes bargains with Yaesu 5400. Which are the differences with the
5600B?

Any comments, advices or (good or bad) experiences about rotors?

Best regards

Eduardo/EA2BAJ

I took the rig(IC-706) have no change to government to get
approval but failed. The officer said that my rig's receive frequency
must lower 146Mhz. I removed D60 and
installed it at D58. The transmit frequency can change to 144-146Mhz but
receive change
nothing.I removed D58 and install it at D57.The HF transmit frequency
have little
change and VHF within 144-146Mhz.The receive frequency still have no
change.I think that the D57,D58,D59,D60 just change the transmit
frequency.I think it will have some
diode to change receive frequency. Would you send me some information
about the diode
that the microprocesser use to change frequency?
If I can not change the receive frequency that suitable to
grovernment, my rig
will become a rubbish.I spent about 4 months and HK$7300 for it :-(.
Best Regards, Freeman(XX9ER)

6808. TS-940 Pin Diode Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970314.102128.9119.11.km1h@juno.com>
Source record: 180410

I'm the person who developed that mod several years ago for my multiple TS-940 contest station.
I use a special order PIN that works right down to the 455KHz IF and use them for filter switching, bi-directional TX-RX paths as well as the front end filters. A 940 takes 45 diodes; add 2 more if you have the IRCI filter switch kit. Prices are $3 a diode. We also sell Schottky mesh diodes for the Product Detector (4 required) at $1 each. I include the diode numbers that are to be changed on the RF and IF boards.

We also offer a full service shop here for the TS-940 only. All Kenwood Svc Bulletin mods plus some other excellent ones are available as you wish. I still own 4 TS-940's and find that once modified they are equal or superior to newer expensive rigs.

If you want to chat pse call me at 603-635-1170

: detector.

<-snip->
You're a grand fella, Bob.

I'm about to do this with my two Kenwood TS-520's. At the last
hamfest I bought a few packages of quad-matched HP shottkey diodes.

I have one question in this area: Is it worthwhile to change out
the balanced modulator this-a-way, as well? I realize it means
re-balancing\re-alignment -- but does it buy me anything?
An inquiring mind wants to know. <g>

6810. IC-T21A batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: msawyer@callware.com
Message-ID: <858365197.29961@dejanews.com>
Source record: 180412

I'm considering buying a pair of IC-T21A HT's, but I'm concerned about battery availability. Mr. NiCad doesn't have any, and Ham Radio Outlet didn't even have any manufacturer originals. What other places could I try? Has anybody else has similar difficulties getting batteries for this radio?

If it's going to be this difficult (and/or expensive) to get batteries for it, I'm going to take a pass and go with a different radio.

Thanks,

Mike Sawyer

6811. Re: FT-1000MP Mod 150 RF Out, How?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: FCFB17A@prodigy.com
Message-ID: <5gc5p8$kg4@newssvr01-int.news.prodigy.com>
Source record: 180413

I have an FT1000MP and it puts out about 110 watts on all bands which should be plenty for most any amplifier. As far as going from 110 to 150 watts as a barefoot rig, the station on the other end will never hear any signal improvement. I beleive the rig is rated at 50% duty cycle at 100 watts which tells me that pushing it to 150 watts would put those finals in jeapordy of very early failure due to inadequate cooling. Yaesu recommends turning power down to 50 watts for rtty. Also the IMD performance on the transmitted signal will probably be a lot worse if pushed to 150 watts. Just my two cents worth. --- Steve N9ROU

Source record: 180414

I don't know which QST review you read, but the TS850 "beat the pants off" of the TS570. In the dynamic range department alone the TS850 had a 35db! performance advantage over the TS570 in blocking performance. Maybe you had a bum TS850. I bought mine brand new and it sits atop my new FT1000MP. The TS850 holds its own very well compared to the FT1000MP . It just does not have dual receive, dsp, incredible flexabilty via menu settings, and all the other bells and whistles which I have come to love very quickly. I have heard that the the TS570 is a great rig, but please give the TS850 it's due respect. --- Steve N9ROU

6815. FS: Alinco HT, DJ580T (2m/440)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: dmgillah@mtu.edu
Message-ID: <5gc9m2$lhe@rock.me>
Source record: 180417

I have an ALinco DJ-580T for sale. It has an Alinco speaker mic,
2 batteries (7.5V and 12V), soft case, wriststrap, and charger.

Unlike some newer radios, the battery does NOT need to be connected
to the radio to charge it. This radio was made before the law on
receiving cellular, so it has that capability if your interested in that
and like taking the risk ;) It also has had the mod for CAP/MARS done
do it. 2m: 118 - 138 AM RX
138 - 175 FM RX
138 - 175 FM TX

440: 400 - 520 FM RX
410 - 480 FM TX
800 - 950 FM RX - cellular

For those who are leary about the cellular, it's not illegal to own a radio
that receives it, only actually receiving it is. (The law is impossible
to enforce anyway...)

The price is $250 obo + shipping
Call (906) 482-8514, or email: dmgillah@mtu.edu

6816. Re: WARNING: ICOM 756, BUYER BE AWARE [opinion]

From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5gcer3$5e1$1@geraldo.cc.utexas.edu>
Source record: 180418

Good Morning Sports Fans--
Well, I can expect we will have some folks will feel burned
when buying any of the new rigs that come to market. You know I've
had my complaints about the 756...but ..really..it ain't that bad...

>> 1. THE NOISE BLANKER WILL NOT FILTER LINE NOISE.
>>
True...its ignition noise only...and it does about -7db on some line noise.
>>

>> 2. THE DSP HAS PROBLEMS, POPING, CHATERING, Etc.
If you turn it up all the way on SSB, it wacks the incoming audio into
un-useability. At half way..its perfect. Conversly, if you crank it up all
the way on CW...it eliminates ALL the noise- and sounds really good.

>> First of all, the so called IF-DSP, isn't. The
>> advantage of an IF-DSP built into a radio is to provide DSP filtering of
>> undesirable noise products prior to entering the AGC and the audio
>> chain. This is far more desirable than using an out-board DSP that
>> filters after the AGC. Problems like LINE NOISE, QRM, QRN, etc.
>> swamping the AGC will cause the AGC to react to the loudest noise making
>> lower level siginals you want to hear "disappear". This should not be a
>> problem with a true IF-DSP as found in other brands, but not the ICOM
>> 756. It appears that the 756's DSP is much more a post AGC device,
>> just like an outboard DSP.

Well, just because the DSP is not inside the AGC loop does not mean it is
Not IF DSP. Thats not the definition. The definition is that the DSP
device is fed an IF signal and operates on IT...not on baseband audio.
Thats what the 756 does..it's DSP is fed from the last IF mixer and it
sure looks like IF dsp to me. Yea, sure, if you have a noise level that
swamps the AGC, the 756's DSP won't take it out...but if you have an S-9
noise level...you should move to the country. DSP is great, but its not
a miracle. Believe me, I own the most expensive outboard DSP box out there
(599zx) and I bought the 756 BECAUSE of it's excellent NR mode DSP.

>> The ICOM 756 DSP and receiver also has other problems. When in the DSP
>> mode with active band conditions, try having a QSO!!! Even with a good
>> siginal, try to work with the noise of the pops, hisses, and what sounds
>> like cliping making for miserable receive conditions. The radio
>> however would make a good trainer for picking out call letters during
>> the R.F. noise while under nuclear attack.

Geeze, I think what is happening is- there is a grinding electrical back-ground
noise level at this QTH..and that type of noise definately does make the
NR mode "pop"..what you do is turn on the attenuator and improve the SN/N and

intercept point..trim down the IF shift a bit (boy-is it nice) and Viola!

>> Additionally, when the DSP noise reduction is on even at low levels,
>> audio phase shift and distortion is present that could present real
>> problems in digital modes. Turn on the DSP notch filter at any time with
>> the noise reduction and hear a not yet named new digital experience; I
>> call it, "Somebody was in a hurry".
Got me? Ever try a Timewave or NIR ? Same deal...except the 756 has less
degradation of the intelligibility with these on-than the outboard boxes.
The excellent auto notch was another selling point to me. Auto-notch
on the 599zx makes it sound like a squid gargling.

>JIM.... WA4KKY

Sorry you don't like your 756. I actually agree with much of your sentiment.
I'll bet that the RX "numbers" are no where near the specs of the 1000mp
TS-850/870 or 775dsp. The bottom line is that they had to skimp somewhere,
(and I lost a 850sat to get this)
Thats what designing a transceiver is an exersize in..trade-offs. What
got traded off in the 756 was a "brick wall" type front end...and a
complete DSP. (no continuous bandpass controls) You must compare it with
rigs in it's price class, and there aren't any. The Ten-Tecs are the nearest
in price...and those are different animals.
What does it excell in? A really interesting display...a clean sounding
transmitter....supurbly clear RX sound, and a hundred watts on 6.
Not a bad line-up.
Jim- I set up a reflector for 756 users today. My aim is to "work"
this unit until we get the kind of rig we want. It is highly modify-able
radio (being half computer)...so please join us on the reflector.
(if you'd like to, please email me)

I hope I won't get flame mails from you all. Check it out for youself:

http://www.icom.co.jp/index.html

It is a 144/430 (59,800 Yen) radio with output 50W/35W.
Detachable front panel, 1
40(w) x 40(h) x 175.8(d)mm,
Tone squelch, Single band display with a "Blue" band switch on the top
left hand corner,
9600bps via a DIN 6 adaptor,
Standard with HM-78 mike (Is DTMF an option?) Optional infrared mike,
182 Memory Channels,
4 output power level 144 50/20/10/5W and 430 35/20/10/5W
Auto repeater offset,
Auto power off,
8 tuning steps and 1MHz step tuning,
Dimmer

It seems to be a pretty standard piece of mobile equipment.

Also:

IC-S7ss 144/430MHz 70 memory channels Dual-band HT (45,000 Yen)
IC-W31/SS Dual band HT (63,800 Yen)
8 characters memory channels (Standard keyboard entry)
8 DTMF memories
Tone squelch standard
All together 222 memory channels
V/V, and U/U receive
Memory clear (nice function)
Memory to VFO, Memory to memory
2 volume knobs
Cross band repeat
Auto-repeater
5W/0.5W at 13.5V

That's all.

73!

Hey:

You guys write your tests, and part of those tests include questions on selectivity, sensitivity etc. Don't abrogate your knowledge to a name brand. As far as I am concerned, there are two name brand products that currently outshine the rest as far as amateur transceivers are concerned. Look to Yaesu or Alinco.

I have stuff from all manufacturers. I don't like Icom's attitude of we are Icom and unless you have been a ham for a 100 years, and your last name ends in 'CONI' and you are generally acknowledged as the father of radio, you are wrong. Having dealt with them all, Alinco has the best attitude towards their customers. "What is YOUR problem?" "What do YOU want to do?" "Have YOU tried this?" That is Alinco's focus. I don't buy into the argument that Icom listened to the ham community and came up with the Mark II. If I was part of the average ham community I would have 2 mtr ewquipment coming out of the gazoo. My needs are unique to me in my mind, and I want a manfacturer to address my concerns.

For a little outfit, Alinco has yanked the chains of all the big outfits. There have been a lot of innovative features put forth by Alinco that have been adopted by the others. I admire that in an individual as well as a company. I have owned Alinco stuff for almost 10 years and I can't wait for them to come out with a base station model. I bought one of the first DX70s out. I had a few minor problems with it, but Alinco made sure that I was satisfied. On the other hand I am still getting the run around from Icom over some other stuff which I won't go into.

I get the impression that a lot of people want to hide under the cloak of security by buying a brand name manufacturer and are a little upset when it doesn't work out. SERVICE is a big part of the equipment purchase equation. Service includes, among other things, recognition of

the customers concerns, recognition that there could possibly be something wrong with the radio, and most importantly the desire to make it right.

Hi Ham Pals,

I've seen ads for the Relm WHS150 handheld tranceiver around, and was considering purchasing it. It's been listed in Communications Electronics Inc. for around $284.00.

Does anyone have any info & pros/cons to share with me about this unit? I seems like a good deal, and from what I gather, it has:

CTCSS decode/encode
Scan
16 channels
Frequencies can be programmed via the keypad in front
VHF Hi-band coverage
DTMF capable keyboard
Selectable wattage (1 or 5 watts)

Is this right? Any help/info GREATLY appreciated!

Email: socks@community.net

Thanks again!!!

The "common" readout fault is usually caused by a mistuned PLL circuit which is easily peaked by following the appropriate Service Bulletin. Personally, I wouldn't shy away from a good radio because of the lack of some specialized parts. If I did, I would have to rule out most radios built more than 7-8 years ago.

Keep in mind the 940 was Kenwood's flagship radio until the 950 came out and that wasn't all that long ago.

Not necessarily. The address the FCC publishes is a mailing address and there are still vast areas of the country where a PO box is the =only= way you can receive mail. Also, women often (and wisely) prefer not to publish their home addresses.

>>Model # T71RTN3190A

The key is in the "T71"

T = Transistorized powersupply

7 = High power (approx 80 watt range)

1 = Low Frequency (approx 30-40 MHz range)

That last number would need to be a 3 for VHF (T73) or a 4 for UHF (T74).

At least it was given to you and you didn't buy it thinking it was VHF or
UHF. :)

Come on now, You have to admit that the multi-tone attention getting video game noises you hear on some repeaters is not a courtesy tone. It's an attention getting noise maker no better than that silly roger beep. I had to laugh myself one day when this neighbor who was a CBer walked into my shack, heard the repeater's "courtesy tone" and said, "What kinda roger beeper is that?"

Sometimes I think we all need to laugh at ourselves a little and quit trying to take everything so serious. The Code vs No-Code and CBer comparison crap will go on forever, lets get on with the hobby and forget this argument no one can win!

> kenny@kacweb.com

I have to agree, I once did considerable research concerning the
effectiveness of newspaper classified advertising when prices are listed
vs when no prices are listed. The results showed that classified's with no
posted price drew considerably less response than those with a price
listed. (this was a scientifically conducted poll using clusterized sampling
and control as well as coordinated focus groups)

The underlying reasons for this had to do with potential ad respondants feelings that if there is no price posted, the advertiser probably wants more than it is worth. Other factors involved the respondant looking "dumb" when a call is made to find out a price and it turns out to be a lot more than he or she had imagined and can afford. (If you have to ask.... you can not afford it syndrome) Other people in the response group told us that they like to see prices for budgeting and comparison purposes and feel they should not have to make a call to find out a price. The real estate industry has known this for years and generally lists prices on every piece of property that is advertised. The auto industry has done this for years also.

I personally do not inquire about products advertised where no prices are listed. Although I may be passing up a bargain, I have found that all too often the seller has an inflated idea of what the item is really worth and this sometimes results in hurt feelings all the way around.

I always get annoyed when I am looking for something in QST and I see the "call for a great price" tagline without even seeing a list price. I understand
that if someone lists their absolute rock bottom price, someone else will beat it
by a couple of bucks, but it sure is a waste of time to call 8 or 10 different places
only to have the price vary by those couple of bucks. A lot of times you will get
the manufacturers list price, so why make the call in the first place?

For most items, prices listed in classified advertising, or in most advertising for big ticket items are just starting points anyway.

David Goodwin (goodwin@micron.net) wrote:
: ... I must be making a silly mistake. I can't believe
: that a feature like DCS won't work on a repeater since I can't immagine
: that people would need it simplex.
:
: 1) Does anyone know if DCS is supposed to work over a repeater?

I still do not know exactly what DCS is (explanations welcome), but
I'm assuming it uses the same frequency range as CTCSS. So, it's
not at all surprising that many (most) repeaters block it, especially
if they require a particular CTCSS tone.

With CTCSS, sometimes one of the higher tones will get through (in the
200+ HZ range) when the lower ones are rolled off.

I absolutely agree with your assessment of the usefulness of DCS or
any selective signalling method: it's not very useful unless it
works through repeaters. It sure would be nice if the manufacturers
could come up with a signalling method that 1) is a high enough freq.
to not get rolled off by PL filters, 2) doesn't trigger DTMF filtering
or control functions of repeaters, and 3) works as well as PL does.

We could each invent our own, but it would be better if it was
built into the radio...

Commercial, Rohn Mfg. Co., triangle tower.

Size at base(each side) is 14' 7".

Wind loading at tower top with 1/2" ice, 72 SQ. ft.

I purchased tower NEW, but it now is 4 years old, never installed because of an injury, base is tapered to 100 ft level, then last 40 ft straight sections.

This is a heavy duty commercial radio tower that has been certified and stamped by a Washington State Professional Engineering Firm. (required for a building permit)

Serious inquiries only, cash sale only, no trading, etc.

Email me for initial contact.

Phil...

Take a 6 meter monoband radio and a 2 meter monoband radio. Place the two antennas , 6 and 2, in close proximity and key up 100 watts on 6. What do you think are the chances of blowing up the 2 meter front end??? I don't think it's the IC-706's fault.

Actually, it's a Schottky TTL PROM, not Flash. That sounds like a TI
part number (from the SN prefix); the 82S129 was part of a common series
of rather small TTL PROMs in use years ago.

Well it would seem a 2 meter 5/8 wave antenna is also resonant on 6 meters. It does nothing to attenuate the incoming 6 meter signal so it is a bit like directly connecting a 6 meter transmitter into the 2 meter port. Not many a receiver will stand up for that. I have seen 20 to 30 watts incoming from a 2 meter 5/8 wave antenna when I was transmitting on 6 meters. Lets see if we can put 30 watts directly into a 2 meter mobile and have it survive.

No it is not a BUG or Defect ... its amazing ... its the law of Physics ...

You would have complained of intermod otherwise, the wide receiver in
that design did not work out. MK II is much better.

>>Then the loud fan on receive,

No thermostat control in receive, only loud in a base station
envirement, never heard it in my truck

>>Then the microphone audio, ect...

Yes the MK II now it has low pitched and bassey audio great for
chewing the rag,

Funny though I always had comments on my 706 audio, it was very clear
and communications quality and it was DX audio punchy.

>>Basically its bugs helped create the Mk II.

Basically 706 owners comments and suggestions helped create the new
radio IC-706 MK II

The CI-V reference manual listed commands for all prevoius radios that
had the CI-V command set available to them.

It is recommended to those whom need some more assistance with the
command set that the radio instruction manual provides. The CI-V
Reference Manual goes further than the product instruction manual does
in explaining the commands and how they are used.

The CI-V reference manual is for out of date radios. Now ALL of the
commands are in the radio instruction manual. One will need this CI-V
Reference manual for writing programs for radios prior that the
IC-820H.

And yes all of the available commands are in the R-8500 manual and
are correct except for ONE command. ICOM is correct there are no
updates for the command set on the R-8500. I know of 4 programmers
who are NOT have any difficulity programming the R-8500 with the

supplied command set in the instruction manual. Geez even U.S. government agencies are finding the command set to work fine.

I would be interested in your findings, please report them to 75540.525@compuserve.com

6864. Re: Has anyone used DCS on a repeater? With FT-50R?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: Publicsafety <publicsafety@earthlink.net>
Message-ID: <01bc302b$3e6896e0$150b2399@safety>
Source record: 180477

DCS does not work on a repeater through your radio because the repeater has a ctcss tone that you need. In other words if the repeater is not open (no ctcss) DCS will not work. (DCS is the digital version of CTCSS)

Paul Christofanelli <paulc@fc.hp.com> wrote in article
<5gaakl$qn0@fcnews.fc.hp.com>...
David Goodwin (goodwin@micron.net) wrote:
: ... I must be making a silly mistake. I can't

: that a feature like DCS won't work on a repeater since I can't immagine
: that people would need it simplex.
:
: 1) Does anyone know if DCS is supposed to work over a repeater?

I still do not know exactly what DCS is (explanations welcome), but I'm assuming it uses the same frequency range as CTCSS. So, it's not at all surprising that many (most) repeaters block it, especially if they require a particular CTCSS tone.

With CTCSS, sometimes one of the higher tones will get through (in the 200+ HZ range) when the lower ones are rolled off.

I absolutely agree with your assessment of the usefulness of DCS or any selective signalling method: it's not very useful unless it works through repeaters. It sure would be nice if the manufacturers could come up with a signalling method that 1) is a high enough freq. to not get rolled off by PL filters, 2) doesn't trigger DTMF filtering or control functions of repeaters, and 3) works as well as PL does.

We could each invent our own, but it would be better if it was built into the radio...

I have to agree with this. The power button is a pain. I've even managed
to accidently turn it off a couple times. I could live with more of a ridge
around the keypad too.

I still don't get the way they weatherproofed the SMA connecter. They could
have built up a rubber seal around the connector on the radio so that any
standard SMA antennas would seal against it.

The 4-conductor speaker/mic plug is a pain and I don't quite see why they
did it, other than to sell their accessories. There seems to be enough
space to put the standard two connectors in, and with all the L-shaped
plugs these days, it wouldn't be any more awkward.

I've had two of the units for about a year. Very nice little radios. 430 & 144 bands cannot be modified to transmit out of band according to many sources in Japan including an engineer who works for Standard. The tx band limits are hard programed into the microcontroller masked ROM. 1.2 ghz Japan band plan is same as US. Works as a great scanner though with only gaps at 500-600 and 700-800 as I recall.

Terry,

Don't feel bad, I'm going through the SAME thing currently.

I have a WTB posting here for VHF Bendix King radios, and I get folks
who respond, telling me they have what I'm looking for, and do not
give model numbers, descriptions, and most importantly, THE PRICE!

Or they'll ask..."what are you looking to pay?"

Or they'll state that they MIGHT be looking to sell, if the price is
right.....SSHhheeeeshhh!

And the best is you respond to them, ask a few questions, AND NEVER
HERE FROM THEM AGAIN!

Wow! Why do they even bother responding to my post to begin with?

6869. Help w/IC706 and AT-160 Tuner Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: leigh@rain.org
Message-ID: <5gak5v$l6o$1@news.rain.org>
Source record: 180482

A ham friend recently bought an Icom AT-160 tuner for the Icom 706 in his truck. He bought the tuner from AES and was told that it should be able to match a 9' whip over most of the HF ham bands.

Neither the tuner manual or the 706 manual mention on how to connect the two together, although both AES and HRO advertise the AT-160 as being able to work with the 706.

He hooked the two together, with just a coax and a single 4-conducter cable, and with no cable in either of the two 7-pin DIN "ACC" plugs on the tuner. While pressing the TUNE button on his 706 would make the tuner make a short whirring noise, putting a SWR meter between the rig and tuner (where Icom says it should go) showed a horrible match on all bands below 12 meters. (The whip by itself is resonant on 10 and 12 meters.)

I then took a closer look at the AT-160 manual, read that for two Icom radios (725 and 726) that an internal switch in the AT-160 should be changed. We took the covers off the tuner, changed the switch, and was able to get a good match on 40 meters, although two strong SSB stations did not seem to hear us. All other ham bands tried (15, 17, 20 and 80 meters) still had a horrible match.

FWIW, there is about 8' of coax between the tuner and antenna. Would putting the tuner directly at the base of the tuner help? (Yes, we are using FM and not SSB for making SWR checks.)

Does the 706 need a second cable going to one of the "ACC" jacks on the AT-160 tuner? Is the AT-160 capable of tuning a short whip over a wide range, or is it just meant to tune a slightly-off "base" antenna? All suggestions are welcome.

Thanks in advance from Leigh Marrin/KM6JE in Santa Barbara.

>Trading over the internet tips:

>When selling, ship COD (cash on delivery), accept only money orders or
>cash (never a personal check). Retain the shipping number from the
>waybill, and insure the package

.I am very reluctant to ship COD unless it is to a "regular" on the
group, or very small items. I have had the joy of sending a 757 on an
all-expenses paid (by me) trip around the country and had the "buyer"
decide that he couldn't afford it. It sat at the UPS dock for well
over a week, before I got it sent back. This succeeded in taking it
off the market for 3 wks total, cost me over $20 in shipping, and I
lost the sale to two ithers because they found another unit.

Ship only prepaid when you have the USPS MO in hand. I tell buyers to
use postal money orders and cert. mail on big stuff , and do the same
when I buy, because the Postal Inspectors are right up there with the
IRS and BATF on my list of people not to piss off.

The majority of people on this group are very honest, and the stiffs
don't last long. I would hope that your buyer gets a case of remorse,
because she certainly will not do business on the group again. You
should have acted sooner, and by all means try calling the local
authorities with a complaint. Sometimes all it takes is a visit from
the town cop asking questions to spur a payment. You may also find
that this buyer is bogus or is using another callsign to scam sellers,
it has happened here before.
Good luck.
>When buying, inspect the package in the presence of the delivery person
>if possible before signing for it and handing over your money (if COD).
UPS will not let you open it before payment unless it appears damaged,
at least in my experience.

6876. Opinions on LMR-444, Belden 9913...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: Chris Lewicki <chrisl@gamma1.lpl.arizona.edu>
Message-ID: <5gb0bh$1sek@news.ccit.arizona.edu>
Source record: 180489

Hi,
I'm about to buy 500' of Coax, and was going to go with Belden 9913
or Belden 9913F (Flexible) up until recently.
Someone suggested that I might consider Times Microwave's
LMR-400 or LMR-400U. I looked at the specs, at least comparing the
two non-flexible versions, the LMR-400 performed slightly better, but
at a moderate price difference ($225 as compared to about $310). The
flexible is significantly more than the Belden Flexible.

For those curious, I'll be running 2m, 70cm, and 23cm down these
through about a 60' run. They will be coming off an AZ/EL satellite
tower, and that's why I'd like the flexible.

Please respond by email, as I don't always read this group.

Thanks.

I was given (for free) an old Lettine Radio 6-meter a-m transmitter
this week. It's rough, but potentially restorable. It's crystal-
controlled, uses a 6146 in the PA, a 6V6 speech amp, and two 6V6's
in the modulator. Does anyone have any information on this unit?
I don't know what the model number is (the paint is flaked off in
that area).

What the heck... if I can't find any info on it, it will supply
lots of great parts for my junkbox...

Hey Mr. Icom.

What about competition? The DX70 leaves the puny 706 in the dust. The Icom is CB compared to the Alinco ... on phase noise, on CW keying and QSK, on fan noise, on receiver sensitivity, on filter blow-by, on user interface, on ergonomics, on SSB audio, on in-line fuse connectors, on microphone plug, oh yea... and on price.

Now tell me, is Icom so arrogant to think they simply "improved on the 706", or did competition have SOMETHING to do with it?

Joe
BV/N0IAT

p.s. Owned both, side by side, been-there and done-that. Alinco won.

6884. More Info: Schottkey Diode Sets

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <5gbprl$k65$1@geraldo.cc.utexas.edu>
Source record: 180497

Good Day all,
OK..here is some more info on the diode sets. The
individual diodes are NTE-584's which are the ones
with the lowest forward E drop and lowest Pf (1.2pf).
You can buy them, but they won't be .25 ea...and
they won't be matched sets. (important if your mixer
does not have a trimmer) I have a list of rigs that
have mixers which can use them, but please check your
schematic to see if your rig uses seperate diodes in
the product detector or first mixer. I remember trying
these diodes in both places, and normally, using them
only one location produced the best effect (in both
places just did not gain a lot more) I remember that
many of the rigs used 1N60's - so you might keep an eye
out for that designation.
Now, the list:
Kenwood
820
830
520
530
430
440
930
940
Icom
720(?)
730
735
745
Yaesu
757
(don't have complete list on Yaesu)

Like I said, please check your schematic, and if it uses seperate
diodes in either the product detector or first mixer, you are
in business.
OK,,I've got 35 sets left..send me an SASE and a buck and I'll
drop them right back in the mail to you. If there actually 35
of you out there who want them, I'll post a SOLD OUT message as
soon as they are committed, and Ill just return your buck in the
SASE if I get any requests after that point (thats the best Idea I
can think of)

Thanks

6885. Yaesu FT-530 Cloning Capability?

Newsgroup: rec.radio.amateur.equipment

From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <33296C48.27E8@acm.org>
Source record: 180498

I was looking through the schematic of the FT-530 and I notice an interesting connection through the audio jack labeled "clone". The clone line connects through to the radio's CPU. Does anyone know if it is possible to activate "clone" mode on the FT-530. I tried the FT-470 trick of powering on the radio while holding down the F/M key but nothing happened. I do not know how any of the newer Yaesu rigs do it.

TIA

6887. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-14 00:00:00 UTC
From: parnass@bell-labs.com
Message-ID: <5gbqr0$4ll@ssbunews.ih.lucent.com>

Add a Plectron or Motorola Alert
Crystal Controlled Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built

in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. Repair service for the Plectron P1 and R700 models is

offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

I have a 706 and think its a great radio,
and the new improvements are added improvements,
cosssband splits, themostat on fan, etc, will
make the radio even more fun.

I predict alot of Alinco owners will
opt for the Icom Mark II. You will not
be able to say the Alinco is better!

Anyway, can't wait till they come out,
I will certainly get one!!

Yes all companies, that goes for automotive, consumer electronics,
computers and most any company involved in manufacturing do listen to
the consumer and do try to build a product that the consumer wants.

I am SORRY, It was MY personal attitude coming through here.
I was sticking up for what I believe in. Seems to me that also
happens in politics, owners of various makes of automobiles, bowling
balls, computers etc.

Go to work in the industry, Try doing 100,000 telephone calls in 8
years and teaching holders of BSEE degrees with extra class licenses
to cut a dipole. To quote a popular phrase these days, been there,
done that, have the T-shirts to prove it.
Your opinion may also be tainted when you see these musings going on
here. No everyone knows as much as they think it appears. I do not
know as much as I think I do, but then I am not afraid to admit to
that either.

Press and hold the Band and squelch button while powering up the
radio. wait for 5 seconds before you release those keys after power
up. The left display is the main band side for UHF so that side will
have the most tuning rannge. Not sure if it will go to 900 MHz
though. Give it a try.

My IC-735 started acting real strange, but it took out a much
greater operating range, which lead me to call Icom and ask questions.
Turns out, my PLL/VCO's needed replacement trimmer capacitors. The VCO
would fall completely out of lock, but I don't remember if it was
temperature related.
Icom had the parts and I did it, but it was a REAL job getting the
VCO opened and the parts replaced. If your not a solder iron jockey,
I would recommend sending it back and have Icom do it.
Give Icom a call anyway at 800-253-1498. If that number isn't
correct, somebody should be able to direct your call. Good Luck.

How does this solve the problem? Instead of getting burned by the buyer, you get burned by the seller who keeps your postal order and can gladly keeps the radio or sells it to someone else and doubles(triples, etc.) their money.

I do not see this as a viable alternative. I am not suppossed to trust the buyer to send the money, yet I am asking them to trust that I'll send them the radio after I get paid. Yeah right.

It's gotta work both ways which, to me, means COD. Granted you run the risk of having the experience of having the radio returned, but, to me, that's the risk you take for having "free international advertising". In the past, you have to take out a newspaper ad and your coverage was to a limited number of people(those who read the paper). Or worse yet, word of mouth. I consider it the "price" of doing business on the Internet.

Both of you could spend more money and introduce a third party to act as the go between which is becoming more and more popular on the net. But then most people complain about the cost of this approach and decide to take their chances and ship COD. And then they complain about this as well. Can't please all the people all the time.

Strong signals,

>suggestions are welcome.

YES you need an OPC-599 or wire up the included 13 pin acc pigtail to
match the 7 pin din as shown on Page 6 of the 706 operators manual.
The problem is the tuner does not know which band it is on. The band
switching information comes from the 13 pin connection on the 706.
Also the internal switch in the AT-160 must be in the other radios
position. So you need both connections to the 706.

Rich, if I were you I wouldn't buy any crystals for a scanner.

The cost of crystals is so high that you can buy a synthesized 16
channel scanner on clearance at Radio Shack for the same price as two
or three crystals.

Cheers

Looking for stuff for my new FT-736R. See my want list below. Send price
and condition (do you have all boxes/paperwork etc) via e-mail.

E-736 DC cable
FVS-1A Voice Synthesizer
Keyer-B Electronic keyer unit
FMP-1 msg disaplay unit

Also might want a FEX-736-220 module if you have one cheap. Must
have
full pwr out and be a bargin.
Thnks
Bob

Also the beauty of it all, If you sell your old handheld, all you have
to do is replace the cup on your Master Charger to accomadate your new
handheld.
It less expensive than OEM. What ele could you ask for?

They have already invented it. Motorola calls it MDC signalling. Not available on any ham gear though.

I have to agree, I once did considerable research concerning the effectiveness of newspaper classified advertising when prices are listed vs when no prices are listed. The results showed that classified's with no posted price drew considerably less response than those with a price listed. (this was a scientifically conducted poll using clusterized sampling and control as well as coordinated focus groups)

The underlying reasons for this had to do with potential ad respondants feelings that if there is no price posted, the advertiser probably wants more than it is worth. Other factors involved the respondant looking "dumb" when a call is made to find out a price and it turns out to be a lot more than he or she had imagined and can afford. (If you have to ask.... you can not afford it syndrome) Other people in the

response group told us that they like to see prices for budgeting and comparison purposes and feel they should not have to make a call to find out a price. The real estate industry has known this for years and generally lists prices on every piece of property that is advertised. The auto industry has done this for years also.

I personally do not inquire about products advertised where no prices are listed. Although I may be passing up a bargain, I have found that all too often the seller has an inflated idea of what the item is really worth and this sometimes results in hurt feelings all the way around.

>

You are probably correct on this point. I am in the newspaper, radio and
TV media business but have no monthly periodical experience. lead times in
my business sometimes are measured in hours. However, I notice that a lot
of advertisers in th monthly ham magazines do not even list the
manufacturers suggested list price which is the first basis for any kind
of comparison shopping. I have purchased quite a bit of gear from AES
over the years and I really believe that one of the reasons they have
always been successful in the ham market is that they usually always list
the suggested price, then their discounted price. Many people do not
comparison shop, and if that is the lowest price they see in print, guess
who gets the sale?

I think this is about to change though. I notice that most of the large
equipment dealers have internet sites listing their prices and, if you
have sent them an e-mail, will send you price updates as a matterof
course, and if the prices drop, you usually know it within a couple of
days.

Hello Don

The SB200s I have used have all been touchy on 10 meters. Although I have not had the opportunity to try this, I remember reading somewhere that it is possible for the exciter to be mismatched to the amplifier resulting in lower output from the exciter. Although your wattmeter may show 100 watts into a 50 ohm dummy load, the load at the amplifier may be something different. A suggested quick and dirty cure was to place an antenna tuner between the exciter and the amplifier and tune for resonance. This may not be your problem, but it sure sounds like something is reducing your driving power on ten meters.

73 and good luck

All true, it is a very fine radio. Works very well, good QSK CW and
receiver.

J>What's to know about this rig. Does it have volatile RAM like the
>751A. How was the power supply/antenna tuner (dependable, etc).

Yes, needs back up battery replace every 5 years. Power supply and
antenna tuner very good. Antenna tuner tunes very fast.

Does any one have a schematic for the Yaesu FT101EX they are willing to copy and send to me. I have a broken radio and want to troubleshoot. I just have a copied ops manual without the schematics. Problem just arose with radio in idle mode. Radio running fine for hours before. Fuse blew during receive mode no xmit occuring prior. Now when heater switch turned on about 30 sec. -1 Min. later fuse blows (No smoking components). Not finals or driver (replaced). No visible damaged parts. If you have schematic and can't/won't send or just are knowlegeable on the radio - any insight?

Deluxe outboard audio DSP unit for sale. Timewave DSP-59+ with all manuals. Perfect condition, works perfectly. I am not selling this because I want to, in asset reduction mode. This unit helps pull out weak signal stuff real well. Excellent noise floor reduction without destroying signals. Has heterodyne position to eliminate garbage from "tuner uppers". Wide range of settings allows you to customize the filter for your ear. Great on all modes.
Check out at http://www.timewave.com/amprods.html

Selling currently new at HRO, etc. for $269.

I will sell for $175 OBO

```
In all honesty, AM on 75 and 160 lead me to getting a license.
In 1973, I had a BC-312-D and listened to the AMers because I
didn't know what a BFO is. They were seen in my eyes as having fun.
They sounded good and they were loud. Tuning didn't matter either.
Plus or minus 5 KHz on a vernier dial and I had something to listen
to. I have become an avid listener 24 years later and have lead
many others that way. AM is not outdated at all, look at who uses
it everyday and not going to other "more efficient modes" CW is less
efficient, in terms of throughput, than speech. That is why military
and maritimes have dropped CW because of efficiency and technology.
Speech is more universally understood, no matter the transmission mode.
Maybe an English test should replace CW, because most negative comments
on this subject show a lack of reading comprehension and a sense of
humor. These combined with some imagination could make you laugh at
just how stupid words can be. Some people too! : }

AM should stay as a beacon to non-hams that some of us have fun on
the radio : }
Sideband does have its fun frequencies too but most any AM frequency
can attract a non-ham, by showing different and INDEPENDENT operation.
Why be like everyone else?

> How about that outdated/inefficient AM ? and why is it called a "roger
> beep"... I think you had part of it correct ("over" or "K" beep sounds
> more like it).
>
> Curt - K8AI
> (elite radio op...)

Right on!
I have enjoyed this discussion. It shows that some of you guys
just can't see how stupid you look when you can't laugh at facts : ((
It is not human nature to be angry at someone who points out little
quarks with certain behavior most hams exhibit. A beep is a beep is a...
Look back on the postings, it is funny to me : }

snip

You know I had the interesting experience of being the tech editor for a ham magazine (in a temporary capacity) a while back, and probably one of the best perks was that I got to spend a few months of one-on-one time with the TS-870, IC-775dsp and 1000mp when they first came out. I was very impressed with all the cool features, but, in addition, noticed that each of these rigs had their little quirks, or bugs if you will.

Technology is a constantly evolving art form and in the rush to be the coolest and the newest, products hit the marketplace before there can be long term beta testing. Now for the guy who shovels out a wad of Kilobucks, thinking that he has bought the ultimate rig, to find a few bugs can mean a real traumatic experience. The lesson, if you want to be an early-adopter, is you have to pay to be a pioneer. Because I enjoy pioneering, I just picked up an IC-756. Does it have bugs, you bet. But I expected them. I even noticed a few when I was playing with it at HRO. I went into the whole process with my eyes open.

Now, I also have a TS950SDX. Would I give it up for my IC-756, no way! But... I think the 756 is a cool rig with a lot of innovative features and a heck of a lot of fun. My 950 has been gathering a bit of dust while I acquaint myself with the 756 and I have spent more than a moment talking to the folks at Icom about various aspects of the 756. They have been helpful, friendly and never gave me the impression that they had invented the last radio the world would ever need - just a real cool rig that will give you a lot of fun in a price range that is very competitive with the other market offerings.

Hello everyone,

for the fellow that was interested in dual-band transceivers that can
monitor two freqs at once in the same band, the dj-580 and 582 will both do
this, contrary to one fellow's belief.
Check out the dual-watch function.

I have forsale a J.W.Miller Low-pass filter rated at 2000 watts. It has 80DB attenuation above 41 MHZ. This is the same filter as the Bencher YA-1 sold by AEA for $60.

I want $30 shipped.

I've got a TS-940SAT that has no more than 15 hours operating time on it.
It's kinda my "baby" and I've just been saving it and talking on older
radios....it's in absolutely MINT condition....sure is good to find out that I
can't get parts for it anymore....geeezzzzzz...

You got me to drag out my 580 and check out this function. Though it really is just a two frequency scan, it is not a true dual frequency receive function. My TH78A will receive two freqs in the same band at the same time. But after checking it out pretty good, it does reduce the sensitivity of either freq by quite a factor.

I acquired a hf tribander antenna, and am trying to find out who made it and what model it is. It has a 18' boom, 3 elements. it has a larger black coil type balun. the balun is approximately 5" wide, 6" dia, by approximately 1/2 to 3/4" thick. I know this isn't much to go on, but maybe someone will recognize it by the balun.
please email direct if you have any info.
thanks

6962. FT-920 Dealer Announcement

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-15 00:00:00 UTC
From: ad7k@accessnv.com
Message-ID: <332a3fcf.1936667@news.accessnv.com>
Source record: 180372

Hi all ...

The dealer announcement is out on the FT-920, and reads as follows:
--quote--
Yaesu, the World Leader in Amateur Radio introduces the new FT-920 HF
All Mode Tranceiver. The FT-920 is a competition grade HF + 6 meter
tranceiver for cutting edge technology that separates Yaesu from the
rest of the pack.

The real difference on this new FT-920 Tranceiver is the signals you
hear, not the ones you see.

The FT-920 includes:
HF + 50 MHz with 100 Watts output on all bands; New Design
MOSFET PA
High Performance 33 MIPS Digital Signal Processing (DSP) in
all modes
DSP Speech Processor for Increased Average Power Output
Voice Pattern Contour Choices
Automatic Seeking DSP Notch Filter and Noise Reduction
Built-in High Speed Auto Antenna Tuner including 50 MHz
(Antenna Tuner works on both RX and TX)
Auto Notch/Noise Reduction Control
Omni-Glow Dual Display w/Twin VFO Knobs
Simplified Tuning w/Shuttle Jog Control
Digital Voice Memory System
Separate FET RF Amplifier for High and Low Bands
Quick Memory Bank (QMB) Instant Frequency Memory System
High Resolution DDS Tuning
Built-in Electronic Keyer (Message Memory Keyer)
Built-in RS-232C Leven Convertor

Model FT-920, Dealer Cost (did'ja think I'd tell ya?) ... List Price
$2299.00

The new and exciting FT-920 HF + 6M Tranceiver will be available by
first week ofmay. Initial quantities are limited. ...

Sincerely,

--end of quote--
That's it in a "rather large" nutshell, boys and girls ... regardless
of what others may say, above are the "facts" as presented by Yaesu
U.S.A. Amateur Products Division (I sat in their office in Cerritos on
Friday, March 7, talking to the National Sales Manager before we went
to lunch together).

73 to all!

>kc8ffv
They never produced a DOS version of that software ... and you can
look for more and more of that to come. Kenwood, for example, now has
training software for the Amateur Radio License which runs only under
Win95 - not on Win 3.1. Go to your local software and look for
"cutting edge" technology that runs on DOS ... won't find much ...
really, not much new for Win3.1 coming out either!!

73 to all!

Very nice radio, Easy to see display and controls for us old farts, manual clear and to the point, nice size, plenty o'memories, keypad entry for expanded freq's in the book!, Cloning, alphanumeric display, needs a drop in charger, AA pack, and extra BP's available soon, but nice sized battery (700-750mah) If you find an associate store (privately owned), as we have locally, the price can be better. The local guy is selling at $349 to get em on the streets.

This just seems to be a revamp of their IC970A,
IC970E and IC970H. I have the H model -bought
4 or 5 years ago -with the 50-905MHz receive unit
& the 23/24cms unit + internal AC power supply.
The H is the higher power version with 40/w5 watts
out on 2m/70cms.
What I'd like to know is what's different with the J
(or is the J simply a Japanese market version) ?

OK, So now that the US list price is out, at list of 2299, that makes
the actual retail price 2299-460 = $1839. Bet it sells at Dayton for
under $1800, with a subsequent price drop a month or two later of
between 100 and 200 bucks (or maybe some "free options" like a filter,
clock, Yaesu hat, coffee cup, log book, microphone, speaker, etc etc).
Joe
BV/N0IAT
p.s. price in Japan is right at 1600 as of todays exchange rate.

6978. ICOM AT-150 auto-tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-15 00:00:00 UTC
From: hb <hb@hevanet.com>
Message-ID: <332ABF43.7584@hevanet.com>
Source record: 180388

With the correct cable, works with most ICOM HF units.

Perfectly matches the style of the IC-735.
Fully automatic and interfaces directly with the radio.

Presets make tuning lightning fast.
Multiple coax outputs and provision for random wire.
Power capacity 150W; use _ahead_ of an amplifier.
Bypass switch.

Very small and lightweight, no external power needed.

Virtually new, in showroom condition.
HRO price $529, see their catalogue.

I will sell for $300, plus shipping.

Not sure exactly where to put the rig, but with antennas you'll have to
be very picky... The saturn uses a lot of plastic body panels.
Depending on where you mount the antenna, you may not have a ground
plane due to the plastic... Best bet would be a thru the glass style
antenna.

Later,
Dave

Most window tinting material uses metallic compounds to darken the
tint... A glass mount antenna mounted over a tinted section of the
window will not be very efficient on the tinting, as the tint will act
as a "shield" between the inside and outside couplers.

> [Note based on observation of this NG]

Hi there

>From the shopping around I did recently, here is what I found. The
radio is the same in both cases, but the RH comes with the 5 watt
battery (sorry, don't have the brochure handy to quote battery numbers)
and the R comes with the smaller (physically & power wise) battery.
This is the difference to the best of my knowledge, unless I'm wrong and
then it will be omething entirely different. ;-)

You must have a typo in the second listing. The first one D23...
means low power VHF (150-174) radio, no pl. The second one would be a
UHF radio (430-450 or 450-470 that is what the 4 means), however the '0'
would mean that it is not a transmitter, which would be incorrect.>

I am listing this for a fellow ham who was selling the tower to me, until my city indicated I have a 35' tower limitation:

60' Tristao Crank-up 3-section antenna tower, galvanized steel, with tilt-up base, guy wires. Owner sold home, must remove tomorrow (Saturday afternoon) from property. Antenna and rotor are already down, buyer must bring gang to take tower down and remove. Owner is asking $150 (catch of the day). Tower is located in Orange, California. If you are seriously motivated to make this tower yours on short notice, get back to me today (ASAP) by E-Mail, and I'll put you in contact with the owner.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

A friend of mine, Tom, N6BGN, is looking for a DG-5 external digital unit in good condition for his TS-520S HF rig. I've been trying to get him back on the air for ages to no avail. His wife recently passed away, and he's alone so I've finally convinced him to get back on the air and make some new friends. If you have one (the DG-5, that is) and need to find a home for it, please E-Mail me with the details and I'll put him in contact with you.

Thanks in advance,

Doug Gavilanes, N6XQY

>courtesy tone/"roger beep"
>CQ magazine had an article around 1981 called "Wait for the Beep!"
>that presented a hypothetical situation and showed how absurd all
>of this nonsense really is. I guess some people just have nothing
>better to do.

I get bugged at the cutesy ones which sound more like a video game, but the original purpose is quite good.
There are a lot of quick key folks who otherwise wouldn't wait for repeater timers to reset, and more importantly, leave a gap for a station who needs assistance, etc, to transmit and make their need known.
The courtesy tone is there to remind us to do this in many cases. If we were all a bit more considerate about leaving a gaposis when using the local machine, repeater ops wouldn't have seen the need.
Most of them in this area don't reset the timer until the courtesy tone. I liked the short tail with no beep, but every machine I hear that uses this practice seems to have their share of quick-key ragchewers who don't leave a space for another station to get a word in edgewise.
Just my $0.02 worth.

Perhaps with SOME people,...
But after 2 days with the manual I haven't needed it in all my
operating of CW, FM, SSB, AM, 160M- 2 M.
The rig is quite easy to operate WITHOUT a manual.
On the other hand I heard just such complaints MANY years ago when the
SSB rigs started to appear.

I own a TS-940S, love it, works great. I too have been looking at one of the "newer" rigs, that is TS-870, Icom 756, spent lots of time on these two rigs. I have the money, really have the itch to buy a new rig, but I simply can't justify it. They are nice, nice features, but really don't have enough differences to justify the price. I am full aware of all the features, DSP is what I'm most interested in, however, my 940S with a timewave DSP provides enough similarily that I simply can't justify the purchase. I guess I'll have to wait for the Kenwood 970S (Even passed up a cheap 950SDX).
To each their own, 73, Mike... WQ0N

We are just in the early stages of designing our ATV repeater and are looking for some advice on selecting our antenna location.

Our repeater will be receiving on 439MHz and will transmit at most 35 watts VSB AM on 1277MHz. We are sharing the site with a commercial repeater which operates on the 800MHz band. It has 10 channels which transmit 30 watts each. All of our antennas are vertically polarized. A this time we are not able to separate the two antennas vertically.

Can anyone give us some ideas of the minimum horizontal spacing between our antennas to try to avoid interference between the systems?

Thanks in advance.

Mike, I don't know if you have any local suppliers there in N.Z. but
I have built and used a Ramsey kit FM stereo tranmitter that put out
100 mw, stable and perfect for the use you have in mind, just plug
your CD player into the line inputs. With a suitable antenna you can
broadcast for several blocks. They make several different kits from
low cost tunable to PLL synthesized and a higher power 1 watt version
for export you might be interested in. Does the N.Z. Telecom Authority
allow 1 watt without a license?

Ramsey Electronics, Inc.
Hobby Kits Dept.
793 Canning Parkway
Victor, NY 14564
Phone 1-716-924-4560

I also built a DC Kits "Stereocaster" FM transmitter that I also like,
it also has line inputs and runs off of 7 to 15 volts. It was about
$30 US.

DC Kits
2334 North Scottsdale Rd.

Scottsdale, AZ 85257 USA.
Phone 1-602-945-7736

Hope this helps,

Jon

I have built a couple of the Ramsey FM-10 and 10a kits and a Rainbow kit
for friends. I would recommend the Ramsey unit for your efforts since the
Rainbow kit does not include a amp transistor to buffer the BA 1404 to the
antenna. The Rainbow kit I found to be somewhat unstable in frequency and very low in
power,for this reason I would not recommend them.
When assembled correctly and tuned to a clean unused frequency in your area
you can expect a signal to noise ratio of around 45 db which is certainly not
broadcast quality but will provide a reasonably good performance.
I have found that for music relay the Ramsey unit works best if it is enclosed
in a case and feed them with a highly regulated and filtered power supply and the
units are left on. The FM 10a does not like hot audio input levels (in excess of -10db,
consumer
standard) and will become distorted so care must be taken when hooked directly up to
a cd player that can exceed these levels. If hot levels are experienced you can adjust the
10a's.
Ramesy offers now a limiter kit to take care of this kind of problem but I have not built
one at this time.
Range with the rod antenna is around 300 feet depending on location of the transmitter.
Power output from the Ramsey FM 10 and 10a's is around 8 to 16 mw depending on kit and
B+ fed to the unit. The Rainbow is around 1mw.
I have not tried the FM 25's or the new FM 100 that Ramsey offers but the costs are
substantially
more than a FM 10a. For these I would recommend that you read some of the comments of these
units under
http://alt.radio.pirate

Due to overabundance of projects I am selling the following items:

Hallicrafters SX-28. This GC boatanchor receiver is in very good cosmetic condition, and should be in good working condition. The radio worked great the last time I tried it (I put it in storage several years ago and haven't touched it since). There are a few knobs missing and the meter is broken, but the housing is intact and I have a meter that may work as a relacement movement. No tabletop case. This was used at a VA hospital, I believe, based on what is painted inside the top cover. 110/220 transformer. Includes an original (NOT a reproduction) instruction book. $200 plus shipping.

Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping.

Speical deal: Take all four of the above radios for $350, or buy all three Hallicrafters and get the Realistic for free!

Kenwood TR-7500 2m mobile. This radio is in excellent cosmetic condition and good working condition. Includes mounting bracket, a reproduction of the operating manual and an original service manual. Ideal first mobile for the new amateur. $50 plus shipping.

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $100 plus shipping.

These items are for sale only, not for trade. I have to get out of the radio business. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

>
>Thanks & 73. --John, K8JS@juno.com
>

The early Clipperton L amps using 4 572B tubes will work at reduced power on 17 - haven't tried it on 12. For 17 meter operation, use the 15 meter band position. The early Clippertons had no impedance matching in the input circuit, so were untuned and capable of inputs from 1.8 - 30 mhz. Later Clippertons DID have input tuned circuits, so may not be useable unless the input matching board is bypassed. I can get an easy 600 watts out on 17 with mine.

From: Gene Benzing <gbenz@kcaccess.net>
Message-ID: <332CC451.E9E@kcaccess.net>
Source record: 180249

I have the following amateur equipment for sale:

Yaesu FT 990 HF all mode transceiver with:
500Hz CW filter
2.4Khz filter (all except FM)
Internal automatic antenna tuner
Internal power supply
Bencher paddles
Yaesu MD-1c8 Desk Mike
In original cartons, with all manuals.

Will ship in US prepaid/insured.
Terms: Cashiers check or bank draft only. No personal checks.
Price: $1300 for all of it

Note: This is well below what AES or Ham Radio Outlet asks for used FT990. This radio has only seen very light occasional use in a non-smoker household since purchase 1year ago. Can be seen in Kansas City area.

If interested, e-mail only please to: gbenz@kcaccess.net.

7058. Looking to interface AR2500 with Opto. Scout

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: RobertRobinson <psykik@gramercy.ios.com>
Message-ID: <332CB318.4F33@gramercy.ios.com>
Source record: 180253

Greetings,
I have an AOR 2500 wide band receiver. It was upgraded with a unit that had cell block and the way in which it communicates through its com port was also changed. Both AOR and Optoelectronics seems to have no intentions at making an interface or software to mate this receiver with the Optoelectronics Scout. I am curious about whether anyone built such an interface or written a program which will allow these two devices to communicate.

I posted this request in the rec.radio.scanner newsgroup, but came up with nothing.

Thanks,
Rob KB2PSM

7060. TS830 Information

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: henrypol2@juno.COM
Message-ID: <19970315.174506.5023.0.henrypol2@juno.com>
Source record: 180311

For those looking more information on the 830 and modifications thereof, check the following:

QST, Product Review, May 1981
QST, Hints & Kinks, April 1989, Second VOX On-Off switch
QST, Hints & Kinks, March 1984, Fine Tuning for the TS830S, Kenwood TS830S Mods
73, June 1983, Strangle QRM with Your TS830S
QST, Hints & KInks, November 1984, Diode-Ring Product Detectors
QST, Hints & Kinks, May 1988, Schottky Diode Update
QST, Hints & Kinks, Sept 1983, Fox-Tango (now IRCI) 2.1 kHz TS830S Filter Mods
IRCI's Kenwood Users Newsletter (no longer published, not sure about availability now, check with IRCI), Issues 11, 12, 15-17, 20-37, 39, 41, 45, 47, 50, 56, 62, 67, 76, & 80 included reviews and numerous mods for the TS830, such as filter cascading, transverter operation, noise blanker and AGC improvements, etc.

In addition, some of the mods for the other Kenwood rigs (120, 130, 520, 530, 820) are applicable to the 830. For example, a RIT mod (increases range to 10 kHz) for the TS120/130 also worked for the 830.

One nice thing about doing mods to an 830 is that you don't have to worry about voiding the warranty; however, you can screw something up, and then you pay to get it fixed. Be careful!

Message-ID: <19970316005001.TAA10672@ladder01.news.aol.com>
Source record: 180316

I'm new to the radio hobby, and I don't know what I'm looking at when I see some of those FS ads here.
What I want is something not too expensive that would be equal or similar to the ICOM IC-710, HF-SSB Radiotelephone.
This is the cheapest model in this mail order catalog that I have here, and this item sells for $1800.
I can't afford this purchase, even though it's the cheapest SSB in the catalog.
Whoever has a used one (could be a different make, I don't care- as long as it puts out the same as this one),
Please write to me directly with what you have and what you're asking for it.
I want one, but I can't pay the price of a new one at this time.
Thanks,
Dale Wein

How would that be any different than a commercial vendor or swap meet
seller over-pricing a rig "for a newbie who wouldn't know any better"?
And is the "newbie" too lazy to bargain or check the price from
other sources?

7069. SB-200 10 Meter Output

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: drallen@prairienet.org
Message-ID: <5gfmn8$pj1@vixen.cso.uiuc.edu>
Source record: 180320

It has been abt 15 years since I owned a Heath SB-200 linear. I seem to recall the -200 has abt 500 watts output on 10 meters. Recently, I acquired another SB-200. All is fine on 80 - 15 meters.

On 10 meters output is around 350 watts; and, plate tuning is a bit erratic -- not as smooth as on lower bands. It seems to act as a parasitic is occuring. Plate dip seems to have a "double-dip" as some amp stages that require neutralization.

Output from exciter is a full 100 watts and the tuned input circuit of the SB-200 has a 1.5 to 1 VSWR or less across 28.0 to 29.0 MHz.

Any ideas on the strange tuning characteristics on 10 meters and the low output. Tubes are Cetron 572Bs. All output ckt components seem OK -- could it be simply the finals??

Any assistance on this would be greatly appreciated.

Tnx es Vy 73,

Don Allen W9CW

: :
: : 1) Does anyone know if DCS is supposed to work over a repeater?

I know that per CTCSS it is dependant on the repeater builder as to whether the tones will be filtered or not.
The repeater that I have built filters out the pl but reinstalls it at the transmitter. This was done so that the pl on transmit was at full power. In addition it will only transmit a pl tone while the receiver is receiving activity. This eliminates the noisy Identifications that the repeater does. No one mentioned it until I removed it one day. People came out of the woodwork to tell me that they had used it to eliminate intermod in their receivers. I don't know if DCS will pass if the same circuit is used that works on CTCSS.

I have bought a few things in Hong Kong.
I didn't really buy to get a good price..in fact, I don't
think gear is any cheaper there. But I did find some models
that I could not find elsewhere (older models discontinued
in the US).

If you do buy something, watch out for which version you get.
Hong Kong dealers may have the US, European, Chinese, etc. version
of a rig. (Basically, options that determine frequency coverage,
repeater offset, tone features, etc.) You could also end up with
a manual written in something other than English.

Check at your local Marine Radio supplier - there will be a "Marine
Public Correspondence" service available in your area - many times on
Channel 24/25/26/27/28, or on 84/85/86/87 (standard marine channels as
found on your radio). Get on one of those channels, ask for the
"Marine Operator", and they can tell you about subscription details.

If you don't want to do that, inquire at local marinas for service
information.

Good luck!

Yes, the IC-970J (J indicating Japanese domestic version) is the same
basic radio that existed here in the States as the IC-970A and IC-970H
until about two years ago, when Icom US stopped importing them, due to
slow sales.

My last check (last week, at the request of a customer) on the price
of the 2.4 gHz module (UX-98) showed a price well over two kilobucks.

Unless demand changes drastically (and can be documented well enough
for Icom to "lay their money on the line"), don't expect to see this
(by now, five year old or more) radio back here in the States.

Don't forget to add 10% to the price for duty when you get back into
the States, and also there is no warranty on it, so if it breaks, you
will have to pay for the service yourself. I would recommend you buy
it here, it's usually cheaper. By the way, the customs people know
EXACTLY what the rig costs, don't try to bamboozle them with a false
declaration...

7089. WTB stereo FM Transmitter, low power high quality.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: mbur@gallifrey.taranaki.ac.nz
Message-ID: <5ggogb$48g@news.taranaki.ac.nz>
Source record: 180340

I want a CD quality stereo FM transmitter so that me and my neighbours
can walk around our houses and listen to my compact disks on a standard
FM walky. A low cost, low power unit is preferred. It has to plug
into the line out sockets of a CD player and deliver a stable signal
at about 100Mhz. Surely not a big ask.

If you have done this at your place please share your experience. Like
what kit did you use and how successful was it.

Does any one know of a good supplier of a complete unit or kitset.
I've seen stuff advertised here but my email goes unanswered. My
last electronic project was an FM bug that works well but is too noisey
for any serious application other than snooping. It's only mono anyway.

I know this is slightly off topic for this group and for that I apologise.
So please lets not get bogged down discussing the legality of
this sort of activity. I'm sure it can it be done discreetly and thats
what counts. I personally don't feel the need for a 10KW linear here.

Date: 1997-03-16 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5ggp8t$njd@coranto.ucs.mun.ca>
Source record: 180342

Can someone fill me in on the details of what a Hallicrafter H2M-1000 is?

I think it's a 2m transceiver witha 110 volt power supply builtin that was made in the late 1970's. I didn't think Hallicrafter was still around then.

What's the frequency coverage, wattage, features, etc?

7092. Is KLM Force 5 a CIR Astro 200?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5ggpcq$njd@coranto.ucs.mun.ca>
Source record: 180343

Is the KLM FORCE 5 solid state HF transceiver the same as the
CIR ASTRO 200 HF transceiver or made by the same people.

This was made back in the late 1970's.

7093. What 100% solid state HF made in 70's?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-16 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5ggqcj$njd@coranto.ucs.mun.ca>
Source record: 180344

Can someone tell me what HF tranceivers made in the 1970's only were 100% solid state with PLL's. The only radios I know of that were made in the late 1970's are:

1) CIR Astro 200 (1977)
2) ICOM IC-701 (1978)
3) KLM FORCE 5 (1977)

Some are borderline like the ICOM IC-720 made about 1980/1981.

Please add to the list if you know of any other makes/models including the year introduced if you know it.

7094. Need Schematic for Microwave Modules MMT 50/28S

********* "RARSfest 97" *********

RALEIGH HAMFEST and COMPUTER FAIR

SUNDAY, APRIL 13

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.
Follow the Interstate 440 Beltline around Raleigh, to
exit 3 - Hillsboro St., and go west one mile to the
Fairgrounds.

Talk-in directions on the 146.64 Repeater.

Date/Time: SUNDAY, April 13, 1997, 8 am to 4 pm.
(Building opens at noon Saturday and 6 am Sunday for
dealer/vendor setup.)

Admission: Pre-register: $5 (before April 5). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $10 per connection.
Drive-In unloading/loading permitted. Bring your
own extention cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-847-8512 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV,
Packet, DX.

-- CONTESTS --

Mobile Enter your mobile station. Separate category for
Contest: VHF/UHF-only mobiles.

Homebrew Enter your homebrew projects.
Contest:

QLF Contest: "QLF" Now try sending with your Left Foot. Yes,
it's an official "left foot" sending contest, with
the largest "straight key" you've ever seen!

QBH Contest: "QBH"??? Now try sending with Both Hips. You'll
have to see, and TRY, this one to believe it. The
biggest set of keyer paddles you've ever seen!
Grass skirts optional, but may affect your chances
of winning (we're not saying which way your chances
may be affected... what shape are your knees in?)

CA$H prizes for 1st, 2nd and 3rd place winners. Not
enough to retire on, but enought to make it worth
your effort. For contest entry information, contact
Rick Merkle KA3PSK at 870-8268, or e-mail him at
ibmrick@aol.com.

General The NC State Fairgrounds hosts a permanent, general-
Flea- merchandise flea-market just outside the hamfest
Market: building. Admission to that flea-market is FREE!

FOR TICKETS For tickets, tables, etc., make checks payable to
AND TABLES "RARSfest." Include your name, call, address,
and S.A.S.E !! Mail to:

Ronnie Reams WA4MJF
SASE REQUIRED! 3509 Rolesville Rd. SASE REQUIRED!
Wendell, NC 27591

Requests received after April 5, or without S.A.S.E.,
will be held at the flea-market vendor door on the west
side of the building.

This year's hamfest is dedicated to the memory of
Rollin Ransom, NF4P (SK).

********** SEE YOU THERE FOR OUR 25TH YEAR *********

I agreed to Mike. I also have a 940 and even though it has some minor problems when I first got it, I was able to get the parts from Kenwood even though they have to come from Japan.

But that shouldn't keep people away from getting a 940. It's a nice rig for that kind of money. I have a lot of fun with it during the Int'l DX contests, both CW and SSB this year.

My father was a HAM operator for many years. Recently, I came across the following item amongst his belongings. I don't know if it could be considered
part of the HAM equipment or something that has nothing to do with amateur radio. The description:

Size is 10 x 8 x 7
Inside near the top is a "platform" with the following on it:
2 take up spools for telegraph (?) tape
In the lower left corner are 3 adjustment screws
In the lower right seems to be a device to adjust or calibrate
On the outside is a hand-crank
Near the center, just below the 2 take-up reels is a long piece of metal strip which is anchored in the center by a small circular post and has a small block at the end closest to the spools and at the other end of this metal strip is another block that the strip can touch but is not attached to.

This is a near a description as I can come up with. There used to be a name on the inside cover of the box but the print is way to faded to be legible.

If you have any idea (or a good guess) please email me. TIA

7110. TS-850/DRU-2 record off the air?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-17 00:00:00 UTC
From: mccarths@lcm.macomb.lib.mi.us
Message-ID: <5gi9mcuvk1@news.tln.lib.mi.us>
Source record: 180031

Any of you 850 owners out there notice that the service manual shows quite clearly a way to record audio off the air with the DRU-2?

The audio path is present to the multiplexer (IC1 pin 1), but getting the proper logic on pins VOA and VOB (pins 10 and 9) to select that input doesn't seem to exist.

Is their a mod or hidden function to get this working?

Thanks,
Sean

I agree with George. Now .. let's get real. I surf the Amateur Radio
stuff for sale. I am looking for ONE of TWO things .. something SPECIFIC,
or .. more fun .. a D E A L !! .. now, if a seller wants to put the onus
of the price entirely on myself, ...I find I have wasted HOURS making
"offers" to folks who are hoping to get ABOVE market value for my " offer"
-- .. like, a STEAL .. for them .. but, then, here is me.. hoping to get
the "steal" .. guess we call this "barter" .. hey! Now .. when I want
something specific, I want the best price, but want "it". If you are
throwing up a generic article, I will make you an offer, if I am
interested..through the years, I have owned and traded hundreds of "rigs"
. sometimes of benefit to myself, and lots of times, to my cohorts.
Part of the fun of SWAPPING ham radio stuff. Could it be . that the
newbies want it to be for pure PROFIT! ... Naaaahhhhhh.....

7113. Hi Q antenna tuners?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-17 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <29118.858570805@safety.ics.uci.edu>
Source record: 180034

Anyone out there think much about a good narrow band tuner
that will help a weak front ended receiver (like most of them,
hi hi) I live in an area with lots of strong local stations
and want to keep them from killing my receivers (many a
receiver crumbles from my large loop here, even the OMNI VI
has some problems when I hook up the antenna).

Anyway, I have re-rigged my Ultimate Transmatch (Murch UT 2000)
as an SPC circuit per the Handbook. It seems to be narrower
and attenuates signal above and below nicely, but I wondered if
there are simple techniques to increase the effect. Is an
air wound inductor better than the ceramic wound one in the
Murch? Can I do other stuff?

Curious.

Source record: 180035

I have an IC-2000H. I love the radio, but the the other day I pushed the memory button and it offered some resistance. Of course, whenever something offers resistance, you puch harder. Well, it broke. The button fell half-way into the radio. I have not taken it out of the car to fix it yet, but even though the button is in place, it is not activating the memory function. Has anyone else had a similar problem? The radio is about a year old, but I think there may be a problem with the buttons on a cold morning.

Regards,

Tom NY4I

From: toneri@ils.net
Message-ID: <5gi9kr$k@nr1.toronto.istar.net>
Source record: 180038

HELP! I need some expert help and advice on a problem with my Johnson Ranger 2.
The VFO does not seem to cut off completely and produces a very rough sounding, wide signal (120 Hz buzz) when not being keyed. Could this be caused by a faulty filter cap in the bisa supply? The bias for the VFO, keyer tube and the modulator comes from a pair of taps on the LV power transformer, to a full wave rectifier (6AL5), and a pair of 15 mfd electrolytics. The question I have for all the fine BA experts out there is: If the bias electrolytics have failed, allowing a high level of AC ripple on the bias voltage, could this be causing the keyer circuit to cause the VFO to be only partially cutoff at the rate of 120 HZ?
I have no equipment for checking the level of ripple on the bias supply and my FET type VTVM is not good for checking electrolytics.
Any ideas or help would be appreciated.

Howdy Group
I recently contacted another Ham offering a 74A4 for sale (his typo, not mine) on the newsgroup without a price, I politely mentioned a tight budget, and got an equally polite response, but no word on asking price even via email !
I've swapped and fested my way from an HR-10 and Eico 720 rockbound station to a nice assenblage of gear, and have spent a lot of money on "good deals" !!!
Some people will go through life clueless, but I will eventually find my 75A4, and may wind up shelling out $700 if it's the one I want !
My Harley wasn't cheap, but I did get a good deal, and the first dealer I visited missed out on a substantial sum with his attitude of "if you've got to ask, you can't afford it ! "
Best wishes to the group, and I'll be posting a list soon of equipment going to the hamfest at Timonium, MD next month (with prices not etched in stone) !

Adam,

I don't know of any place on the Web with the kind of info you seek,
but that doesn't mean there is no such place.

The BEST way to learn is to join your local ham radio club and ask
the "ol' timers" about the rigs of yesteryear. We've all owned them,
so we can tell you about them first-hand.

Does anyone have any mods for the Icom 736 HF transceiver? I'm also considering a transverter to add more vhf to this radio. Has anyone tried this? Is it possible. I'd appreciate hearing your results.

7134. Icom 781 vs 756 Spectrum Scope

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-17 00:00:00 UTC
From: hsawdy@cts.com
Message-ID: <5gjo34$j4q@bogus.cts.com>
Source record: 180105

I must admit that I have always dreamed of owning an Icom 781, mainly because of the monitor scope. So when I saw the 756 I thought my prayers were answered.

However, reading the various posts about the 756 and the almost useless monitor scope (especially in trying to pick out stations because of the slow refresh rate) it got me to wondering whether the 781 monitor scope's refresh rate was quicker in its refresh rate?

Is the 781 monitor's refresh rate fast enough to pick up new stations, much as a pan adaptor is able to do?

Any comments would be appreciated.

Oh, heck, did anyone post these yet? The

TEN TEC TRITON series of transceivers started BEFORE 1972, before all the ones you listed there. The first one I used was at Dayton in 1971, if my memory serves me correctly.

I bought the Argonaut 505 in 1972, it was produced after the Tritons. The TEN TEC Tritons and the Argonauts were 100 per cent solid state right through the transmitters, and were SSB/CW mode rigs.

TEN TEC had been making QRP CW transceivers that were all solid state for quite a time before that. The PM "power mite" series of CW transceivers were being kitted and built in the late 60's. I believe Heath followed with their HW-7 and the series after that, in the 70's.

Lest we forget the SBE rigs? Weren't some of those all solid state? I did not own one, but recall guys talking about them.

For Sale: I am getting out of ham radio and have the following equipment for sale. Prices include shipping via UPS CONUS.

(1) Kenwood TS-870S with SO-2 TCXO unit. This transceiver was purchased 12/23/95, and used very little. Has been stored since early December of 96. I have all original packing, and even have the computer program for controlling via computer. Asking $1,850.00.

(2) Icom IC-22A, Mirage B-108 and DRSI DPK-2 (TNC-2) as a unit. This combo has been in use as my Packet station, and besides the crystals normally equiped from the factory, has the 145.09 mhz pair. would like to sell this combo as a unit, as I have attached the amplifier to the top of the 22A. I have all manuals and asking $250.00.

(3) Hal PCI-3000/SPT-2 computer board for AMTOR, RTTY, ASCII and CW. Board has latest Hal updates, and I have floppy disk with the Hal program and all manuals. Asking $180.00.

(4) DRSI type 2 computer packet tnc. This has proven to be one of the best tnc for packet if not the best! Included are two DCD-3105 state machines, which allow you to open your squelch all the way. Included are the manuals and 5 floppy disk with assorted programs from DRSI. Asking $190.00.

(5) Vibroplex Original Presentation bug. This model is the 24k gold plated model. Cost over $250.00 new, and was purchased 12/23/95, Asking $150.00.

(6) Telex Contester headset. Is wired for Kenwood. Original carton and instruction sheet included. Asking $75.00.

Also have the following misc items.

Diamond MX-72D duplexer. $35.00
Drake TV-3300 low pass filter. $25.00
Kenwood SP-41 speaker, 2 each. $30.00 each or $50.00 for both.
Diamond SG-7500/K600M antenna and trunk lid mounts. 2 each. $110.00 each or $200.00 for both.

Call (972) 962-3595 between 10 AM and 2 PM weekdays, or after 10 AM weekends. Thanks. Don W5QXK

Herald,

The refresh rate is just fine and the transceiver enables one to
create a sub mark and or transmit mark and then follow a dotted line
to a station you want to monitor or contact. At that point one may
then return to precisely where you were if you wish.

Many of the postings you have seen here are just santimonious
hypocritical pontification by those who are envious of 756 owners.

In my view this is a BETTER scope (LCD) than the 781. Once you have
used the radio for a few hours and see how it assists you in
determining what is on the band and where-AND at what signal strength,
you will not want to go back to a receiver w/ only a digital readout.

Dale,

My experience with runnung a tranciever on a automotive battery with a charger simultaneously hooked up and charging is that it is posible to put out objectionalble 60 Hz hum on transmit. It's not as noticeable on recieve. Just my experience, may not be true with all radios/chargers depending on internal filtering etc. Battery condition does seem to ba a factor... a fully charged battery doesn't put out as much hum probably because the battery becomes a better filter, Also I have not tried this with any type of choke/cap external dc line filter either.

I have for sale a Round emblem Collins 30L1. This Amplifier works perfectly with 700-800 Watts output All bands 80-10 Meters. This unit shows wear and use, it has no dings or dents but the paint is faded and the white plastic ring is yellowed. on a scale of 1 to 10 I would class it a High 7 or maybe and 8. Selling because I got another Amplifier. Will sell for $400.00 plus shipping.

7166. Best battery for TH-79A(D)H?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-17 00:00:00 UTC
From: Mitch <slwkm@cc.usu.edu>
Message-ID: <332DDA03.36B5@cc.usu.edu>
Source record: 180137

I'm looking for some advice on batteries for my TH-79A(D)H. I think
I've done my research before posting. :)

I read about NiCads:
http://www2.bath.ac.uk/~bspahh/bikelights/node10.html

and NiMH:
http://www.maha-comm.com/

Couldn't find anything on Lithium. :(

I'm looking for a battery that I can recharge without harming the
battery by overcharging. Each night, I want to top off my battery with
the standard BC-17 wall trickle charger.

The NiCads apparently have no memory effect to worry about, but can be
damaged by overcharging. NiMH said they have overcharge protection, but
is this really true? How's their quality? Lithium probably would be the
best, but can you find them in amateur radio products (TH-79)?

Any advice/info would be appreciated.

I am seeking either new (old stock) or good, used/tested audio tubes of

the following designators:

DRIVER TUBES:

12AX7/ECC83 -- European only (Telefunken, Amperex "Bugle Boy", Mullard,

Valvo, etc...)

5751 -- All brands

6DJ8/6922/ECC88 -- All brands

12AT7/ECC81 -- All brands

6BM8 -- All brands

6SL7 -- All brands

6SN7 -- All brands

POWER TUBES:

6550 -- All brands

KT88 -- All brands except Chinese

6CA7/EL34 -- All brands

2A3 -- All brands except Chinese

These tubes will not be resold--they will be used by members of our

local, home-builders audio club. All REASONABLE offers will be

considered--even if you only have a couple of tubes available.

Please e-mail or FAX (619) 296-0927 with brand/type, quantity avail. and

condition (new, used/tested or ?).

Thanks,

DENNIS, W1LJ/6

Nothing on the web I'm familiar with, but there are two really excellent books that can help. They are collections of equipment reviews from QST magazine; "The ARRL Radio Sourcebook," Vols. 1 and 2. They cost about $15 each and are worth their weight in gold.

Good luck!

If I am not mistaken, the TS-570S is 6 meter ready. The TS-570D,
however, covers only HF.

some things that are not answered in the ads.
==========
The microphone appears hardwired to the rig! is it easily detatchable?
do you recommend the joystick or DTMF mic?
Is the joystick mic easily used for DTMF tones or harder?

Is the gap between the display and rig unit wide enough to put velcro on
the back of the display for easy placement between car and home?

Is the Crossband repeat oneway AND bidirectional as in the 8000r?
Or only capable of oneway repeat?

Does it have a built in duplexer so I only need to hook up a dualband
antenna?

After careful consideration, I am selling my Drake TR-7.
It has not been modified in any way, and comes with the following:
TR-7
DR-7
Noise Blanker
300 Hz filter
500 Hz filter
1.5Khz filter
PS-75 power aupply
Sp-7
extra cover
mobile mounting bracket
dc plug/fuse for mobile.
(No, I didn't use it mobile, someone handed me the mobile parts)
This radio has never given me any problems, and was in daily use by me,
mostly on 40 cw.
$700 plus shipping.

7191. GE Exec II on 900 mhz.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-18 00:00:00 UTC
From: Chris Nicholson <csnichol@mail.delcoelect.com>
Message-ID: <332ED2E5.41AB@mail.delcoelect.com>
Source record: 179961

Here are the mods I preformed on an Exec II 800 conventional
(not trunking) radio to move it into the 900 ham band. These should also
work for the MVP radios.

Exciter mods. change these caps to the following
c127 27pf
c129 27pf
c136 22pf
c137 20pf
c147 4.7pf
c148 4.7pf
Oscillator board mods.
c21 270pf
c22 20pf
Order crystal for your tx freq and install in the channel element
tune up the tx by the book. 35 w pa will do 20-25w without mods

This puts the RX 45mhz down from TX. something must be done here.
I took a 33mhz clock oscillator module and a Mini Circuits sbl-1z
mixer and mixed with the RX LO output from the exciter board to feed
the RX lo filter. this is probably not a temperature stable setup though
i have never used it mobile. This gives me a TX -12mhz RX freq for the
repeater split. A temp compensated channel element for the 33meg
oscillator might be a better choice for rx freq stability.

RX front end mods.
Trim 1/4 turn off all Helical resonators in the front end and LO filter

AmSoft announces the 1997 release of "The World of Ham Radio
CD-ROM.
The World of Ham Radio contains the World's largest collection
of amateur radio software, and the most recent FCC amateur radio
license database available anywhere. Track all US and Foreign
Licensees authorized to operate by the FCC. More than 1,000,00
callsigns are found in seconds with this CD-ROM. The current
database includes calls issued up to 14 January 1997. Find hams
by full or partial call sign, prior call sign, last name, first
name, State, City or zip codes. Create your mailing lists or just
print single labels from this FCC Callsign database program.
DOS, Windows 3.x, and *Windows 95 compatible lookups on this
CD-ROM.
Every issue comes with the AmCall auto-logging station logbook
which uses this callsign database. Compatible with most other
amateur radio software packages available today. Also includes
all the "Vanity Flood Gate assignments, plus the missing 3,500
"Vanity Assignment still Available" calls.

There are over 2150 amateur radio modification files included on
this CD-ROM logically arranged by manufacturer, and model number.
That's over 800 new mods since our last issue.

This CD-ROM is non invasive to your drives, this means no hard
drive usage unless you decide to use it.

A Complete user interface "CDVIEW" for the Ham Radio Software
library eliminates the need for you to use DOS commands and
hard drive space. CDVIEW includes Instant online help and
program documentation by pressing the (I) key on your keyboard.
CDVIEW will make it very easy for you to move through and
operate
the massive 20,000+ file compilation. These files could easily fill
822+ Megabytes of space if they were not on this convenient

CD-ROM.
Users can preview new ham software directly on the CD-ROM
without
requiring a hard drive, many of the software programs run directly
from the CD-ROM. You can use the CD-ROM to place files onto
removable diskettes, or to install files onto your computer.

For more information visit: http://hamster.ivey.uwo.ca/~amsoft/
or contact AmSoft direct from the information at the top of this
notice.

I heard KF4HK (kf4hk@aol.com) say:

: Swan Astro 102BX, 1978

Did indeed use a PLL, but also used a pair of PTOs. Drake TR7s used a PTO as well, but had PLL circuitry too, to eliminate all those band xtals. Drake didn't go fully digital until the TR5/RV75 gear in the early 80s (and the R4245/TR4310 commercial gear, also in the early 80s) An R7/TR7/RV75 combo is still *very* hot stuff.

- 440-470 MHz TX/RX Operation
- Continuous duty operation
(no fan required if operated at +25 Degs. C ambient)
- 10 to 40 Watt TX Output (adjustable)
- 0.30uV RX Sensitivity
- Built in Battery Switching and Charging Circuit for Aux. Power
(uses external Lead-acid battery)
- Switchable 115/230VAC Operation
(Built in power supply)
- Internal CTCSS or DCS Encode/Decode
- Compatible with most tone panels
- Comes with Service Manual, and complete
set of extra circuit boards including power supply transformer and
spare receiver and transmitter/PA.
- Currently crystalled up and tested on 444.900MHz (TX), 449.9MHz (RX)
- Works flawlessly, and has never been in service.

Also includes:

- "dB Products" DB-4072 Duplexer.
($1350.00 new list price)
6 cavity unit w/80dB notch (250W capability)

- "Midland LMR" 19" Enclosed Rack cabinet w/locking doors, 4 tall

- "Rotron" Rack type dual 200CFM fan type blower.

All items are installed in the rack.

I am asking $1000.00 for the complete system. I plan on taking it to
the RARSFest on April 13th at the Raleigh Fairgrounds.

> critter
> is available?

Markertek Video Supply probably has them. Their number is 800-522-2025.
If it's the standard (or used to be), I think they run around $10.
That's for a EIAJ Circular 10 pin female chassis mount. Part # E10FCM.

Quality Video Supply has them as well. 800-431-6000. Part #E10JCM.
Same price.

Hope this helps...

7210. Wanted--> Vertex VX-10 or FT-50

Newsgroup: rec.radio.amateur.equipment

I am wanting to purchase a Yeasu FT50R with accesories or a
Vertex VX-10 each with multiple batteries, programming software/cable
and adaptors a plus! They hopefully are the 5 watt battery versions
with the ftt-12 keypad(ft-50) or the 16 keypad(i think) for
the vertex. Any info would be appreciated. Thanks Much!

Correction to last post...
The radio is the FT757, not 575 as listed. This radio has been mobile,
and is now replaced by another radio.
Comes with:
manual
built in cw filter
microphone.
power cord
All for $500, plus shipping
Frank KG9H work 630-924-1600

One of the local St. Louis Radio Shacks has the new 2m/70cm HT in stock.
It looks a lot like the ADI model to me- smaller than the '202 so don't
count on using your old batteries. List price: $400. I copied down the
"after keyboard mod" frequency ranges, but this is all the info I have:

VHF Tx: 142.500 - 149.500
UHF Tx: 438.000 - 450.000

VHF Rx: 100.000 - 199.995 (AM or FM)
UHF Rx: 300.000 - 499.995
800.000 - 868.000
896.000 - 999.990

TAPR sells the 1.1.9 eprom which is an upgraded version of the ones
which came with the 1274. If it is an early 1274 with 16k RAM, you will
need to upgrade to 32K. I expect that you could get an eprom directly
from MFJ also.

Yes, but it uses a modular plug and you must remove the faceplate to disconnect.

> do you recommend the joystick or DTMF mic?
> Is the joystick mic easily used for DTMF tones or harder?

Mine is DTMF, and I like it well enough. I have no basis for comparison.

> Is the gap between the display and rig unit wide enough to put velcro on
> the back of the display for easy placement between car and home?

You must order the optional remote mounting kit to do this.

> Is the Crossband repeat oneway AND bidirectional as in the 8000r?

Have you tried an SM-220/230 to go with our TS-940? Or as a comparison
to the sampled data scope on the 756?

The best tool, in my opinion, for chasing DX is a light touch on the
main tuning and good ears :-) On the other hand, I'm totally addicted
to the scope on my 781 ....

I am seeking either new (old stock) or good, used/tested audio tubes of

the following designators:

DRIVER TUBES:

12AX7/ECC83 -- European only (Telefunken, Amperex "Bugle Boy", Mullard,

Valvo, etc...)

5751 -- All brands

6DJ8/6922/ECC88 -- All brands

12AT7/ECC81 -- All brands

6BM8 -- All brands

6SL7 -- All brands

6SN7 -- All brands

6N7 -- All Brands
5694 -- All brands

POWER TUBES:

6550 -- All brands

KT88 -- All brands except Chinese

6CA7/EL34 -- All brands

2A3 -- All brands except Chinese

These tubes will not be resold--they will be used by members of our

local, home-builders audio club. All REASONABLE offers will be

considered--even if you only have a couple of tubes available.

Please e-mail or FAX (619) 296-0927 with following info, please:

Brand/type, quantity avail., condition (new, used/tested or ?), price.

Thanks,

DENNIS, W1LJ/6

Source record: 180002

I've got an Australian kit: a 2 mtr DSE Commander which has developed a problem. Occasionally the rig has an intermittent. The power stays on, as evidenced by the s meter light, but the rig will not transmit or receive on the designated frequency. Sometimes when this happens it appears to receive pager signals out of the 2 mtr. band. If I disconnect the 12 volt plug and turn on the rig again, then it seems to go back to normal and function ok for a while. Sounds to me like a power supply problem, but what exactly?? Anyone down under, or anywhere else, know this kit and can help? Anyone experience the same problem? Many thanks for your consideration of my problem. Best 73, de John, K7JY, Seattle.

Hi Dave....I have a DR605 which I purchased from Dayton Hamfest in 1996.
The "one wire mod" is simple; just take off the metal case and locate
the
blue wire on top of the rig, near the front display. Snip it and this
will
open up full tx and rx for vhf and uhf. By the way, I love the radio and
the price wasn't too shabby either ($410.00).

Good luck and let me know how it turns out!!

Chris

Courtesy tones are especially good when you're in a QSO but not paying
any attention. When you hear the "blee-bloop," you know its your turn
to say, "Ahhhh - Rig here is a Ya-Com-Wood with a triband Cush-Comet at
35 feet AGL, 545 feet MSL..."

7248. Question concerning Icom IC-706

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-18 00:00:00 UTC
From: Don <varpenns@usaor.net>
Message-ID: <01bc3334$61f51960$578794ce@micron>
Source record: 180157

Does anyone know if Icom has improved the IC-706 transmitter's poor IMD characteristics at rated output on 2 and 6 meters?

This problem was described in the March 1996 QST write up about the radio. Also, they mentioned that this was the most serious problem with the radio.

I would appreciate input from anyone knowing about such an issue or any other comments or critiques about the radio. Thank you very much.

Please email any responses to Don at email address: varpenns@usaor.net

Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner.
Extremely light use. Approximately 30 total contacts is total usage.
In perfect shape, like brand new with all the original boxes and
packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four
microprocessors provide the easiest possible control interface. Two
independent VFOs for each band (20 total) hold their own frequencies
and modes as well as clarifier offsets and repeater shifts. 32
memories store data for the VFOs giving a total of 84 independent sets
of frequency, mode and other selections. Noise blanker, all mode
squelch, 4 function multimeter, and AF speech compressor with
adjustable IF passband shift. Iambic memory keyer for CW with dot-dash
memory.

Top panel heatsink allows this radio to run cool at all times and with
an internally switched fan, it allows full transmitter output without
any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $900.00, buyer to pay shiipping.

From: jjm@shore.net
Message-ID: <5gkv0s$go3@fridge-nf0.shore.net>
Source record: 180163

Lemme see....now what is the difference on the receiving end when
someone increases his/her power from 100 watts to 150 watts?

Well, if it is half an "S" unit for 3db which is twice the power are
we looking at a quarter of an "S" unit for a 50% increase in power?
Is it really worth the effort?

If Yaesu had wanted it to have a 150 watt output they would have put
it that way....besides this is ham radio...

The battery backed ram should last 15 to 20 years.
I know of one ram board that was programmed by ICOM in 1982 and it is
still going strong. If the battery is 3.35 volts forget it if it is 3
volts or less then change it out.

Yes. It's been around for about 25 years. It was designed for tv antennas and intended to be used instead of coax where a balanced feedline was desired. It's impedance is 300 ohms. Loss is greater than cheap twin lead but less than coax especially if you add in the losses from baluns which are necessary at each end of coax. It can be run over power lines, next to metal gutters or even on the ground. It is not satisfactory for transmitting purposes.

Source record: 180171

Thanks for your reply.
By the way, i now have a new 35 amp 12 VDC power supply.
I won't need a battery + charger hookup afterall.
I did try to run a VHF radio from a battery charger, and it did receive ok.
Upon trying to transmit, the radio turned it's self off, I guess from the lack of needed amperage. The charger wouldn't increase it's output to handle the drain.

Set up both band the way you require them to be. Press both the VHF
and UHF tuning knobs and VHF set button all at once. The memory
channel numbers will change to a flashing " L " . To revert to
normal, just press the VHF Set button.

The biggest difference you will see is the 756 scope is attached right
after the preamplifiers and the 781 is attached after several stages
of IF amplifiers. The 756 scope has its own AGC circuit and the 781
uses the receivers AGC. It is possiable the 756 scope may not see the

lowest signals the 781 can, also there is $ 6000.00 difference in the
price of the two radios. Most who have used the 756 to date like it

and like the scope function.

> Does anyone have any experience on the icom m700 marine hf rig? I was
> told that the power output and mike gain is too low for it to operate
> well. Any comments?

Yep... that's when a properly adjusted preamplified mic and wide-coverage linear RF amplifier come in handy. But since HF Marine radios transmit from 2-30 MHz it would have to be one heck of a tolerant RF amp! The amp needs no mode other than SSB, since all High-Seas ITU frequencies are USB-only. Besides, even if you did need to operate AM, a SSB linear amp will work fine, it will merely delay a second or two when switching from TX to RX.

BTW... There is NO such thing as a maximum legal power limit in international waters for the HF High Seas Marine Radiotelephone Service, however, the ONLY time a sensable radioman wants more transmit distance than receive distance is when calling "mayday".

I would recommend getting a more reliable rig as soon as you can. When you do need to call a "mayday" you don't want to trust your life to a piece of crap. Navy/Coast-Guard/Merchant-Marine surplus gear is not badly priced, but it is hard to find and may be in disrepair too.

If you want to buy from civilian sources, top brands like Allied-Radio, Motorola and General Electric,(in order of preference), have a LONG record of rugged, durable commecial vessle service and they can't be beat for readiness in an emergency.

Suitable for framing:

```
+-------------------------------------------------+
| |
| "NEVER be left S.O.L. when you have an SOS!" |
| |
| -Old Navy Radioman's Motto |
| |
+-------------------------------------------------+
```

BTW: If it is neccessary to explain to you what "S.O.L." stands for, then you have never "cussed like a sailor"!

I believe the program is in ROM. Only the memories are held in the
battery backed RAM. Unlike the R71, you do not need to return it to ICOM
if the battery goes bad.

By the way, you can easily mod the 765 to restore the passband tuning.

Then you must also want a strapping fine from the FCC! The last person I heard of who did this lived in Venice Beach, CA. and was transmitting a measley 30 Watts and the fine they gave him for transmitting on the FM broadcast band without a license was SO huge that he had to sell his beach-front house to pay it,(with very little change left over).

By the way, the name of this newsgroup is not: rec.radio.how-to-pirate

Bob,

Press the band key and moni key while turning the unit on. Now when you
step through the band (band key) the radio will go to 144, 300, 430, and
800MHz (cellular block).

Anyone know where I can get a solar panel and any other needed equipment to keep a 12 volt automotive battery charged (not in vehicle) for emergency power backup for my station?? Any idea on cost too?? Thanks. Eric viking@add-inc.com

7288. How to Mod Power/SWR meter for 160 meters?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-18 00:00:00 UTC
From: Patrick Tatro <patrick_tatro@stortek.com>
Message-ID: <332EB908.25A5@stortek.com>
Source record: 180197

I have several SWR meters, none of which are rated for 160 meters.
This leads me to believe that the readings I get from them might be
inaccurate. They are all ham 3MHz - 30MHz. Three are Radio Shack types
and another is a real brand X. What can be done to extend the range
of an SWR/Power meter rated for 3-30MHz?

7290. FS: TL-922A Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-18 00:00:00 UTC
From: markf@col.hp.com
Message-ID: <5gmjf9$snb@nonews.col.hp.com>
Source record: 180199

I bought this amplifier from a long-time friend about 5-6 years ago.
It has been in a box most all the time since then (I went inactive
not long after he went inactive).

It has a FEW imperfections on the cabinet, but none on the faceplate.
I have the manual (NOT a copy). I have recently been able to get
back on the air, so it is now being used. I used a variac when I
first powered it up a few weeks ago, so as to protect the HV caps.

The amplifier works perfectly. I know of no problems whatsoever.
Again, I've owned it and used it now over a 5-6 year period.

Reason for selling: I have an SB220 that I've had even longer, and
since I no-longer have a Kenwood xcvr, I'm not interested in that
"integrated" station appearance. Additionally, I'm preparing to
put up a tower, and can apply the funds there.

I am happy to provide a couple of references if you feel better
with that. Any question?

MAKE AN OFFER: with tubes in it $__________
without tubes $__________

The option is yours.

>features....

The new RS dual band HT is made by ADI for RS. It is almost identical to the ADI AT-600 which should be hitting the stores soon. One major difference (besides the $100 price difference!) is that the RS model cannot be made to tx out of band, while the AT-600 can be modified. The AT-600s are late in hitting the street because ADI had to finish the big run for the RS version. The AT-600 is due to hit the street in 2 or 3 weeks.

Jim:
Check www.ericsson.com(they bought out GE). They have
manuals available for nearly all GE radios. Do a search by model number
to obtain the number of the manual you need then call the 800 number
to order.

Apparently these radios are not FCC approved for sale in the US, and
are made for foreign distribution only. Anyone selling them
commercially in the US are doing so as a back-door gray-marketeer, and
the units will most likely have no Motorola warranty.

Source record: 179868

I have 2 of them for sale.
One is on the air daily in commercial service. It is complete with
controller and tone panel.

The other has been recrystalled and realigned to 443.500 MHz by a
professional 2 way shop. It has not been re-installed in ham service. No
controller or tone board.

No duplexers included.

Offers considered for either or both. Both are in excellent condition and
I can include at least one set of manuals. Pick up only in Southern NH.

Tnx...Carl KM1H

I've been using Ringo Rangers and Ringo Ranger IIs since the 1970s, and they have always worked well. These old workhorses have been the "standard" for years and years, and they can still be bought cheaply at hamfests (used, of course). They're easy to maintain (I've never had to repair one) and very broad-banded. They are also DC grounded for lightning protection and less static noise.

The Ringo Ranger that I have up right now is nearly 20 years old and works as well as it did when it was new. I put it up on the current mast over 13 years ago and haven't touched it since!

I would imagine the battery packs to be interchangeable, but I do not know. The ADI Smart battery Charger (ARC-12 HT) lists for $89.95 -- quick charge in 1-2 hours then drops to trickle. Has a "Discharge Function" for NiCads. Works with either 7.2 or 12 volt ADI batteries. Works off AC with included adapter, or directly from car cigarette lighter (w/optional adapter).

The regular wall battery chargers list for $12.95 each. (Single voltage).

Battery packs list for $34.95 (7.2v NiCad) and $44.95 (12v NiCad)

A dry cell battery pack is available for $19.95. (6 AA batteries provide ~9v for 4 watts tx.)

12v car adapter lists for $14.95.

All this info is available at their web site

http://www.adi-radio.com/

I am not affiliated with anyone, I just did a little research and am going to buy one soon, even before I can use it!

Recently picked up Kenwood TR-7800. Anybody got a manual copy??

Does this rig have Tone encode/decode capability? There is a "tone"
switch on front... Looked inside, but no diode matrix or switches
to set for PL tone (that I could see).
Also, there is spot inside for batteries (hold memory, I presume).
It came with outboard 110v wall wart, that plugs into "backup" plug
on the back (memory backup?).

Looks like only way to get VFO to change is keypad entry, as normal
VFO knob only cycles thru memory locations, right?

I hooked up PWR/SWR meter, looks like 35W high power, 8 watts low.

Maybe explain how "priority" & "oper" works?

Thanks,
Vic AA2YW with old rig, no manual!

Doug:

Yes, I used it ages ago not totally understanding what it was supposed to do. It is basically shielded 300-ohm balanced transmission line. If everything from the antenna to the receiver were truely balanced at all frequencies, there would be no need for the shield. The shield is supposed to keep common mode "noise" (like HF amateur transmitters) out of the transmission line, and, therefore, the TV receiver. A fully balanced transmission has no need for a shield. If the shield is properly terminated at both ends, its marginally successful. The shield is too thin to effectively shield magnetics fields generated much below 20 MHz. Where do you "terminate" the shield at the TV antenna end? Who knows! In reality, just use "normal" twin lead and forget the additional expense and bulk of the shielded stuff.

Mike -

While I've not tried the 756 I have had some experience with the 781. Don't be too hard on the scope in the 756, the one in the 781 is useless also. Just another example of the ricebox builders solution to the marketing guru's demands for gadgets. Just think how much improved these rigs would be if the gadget budget went into some real R&D. In time, the ricebox receivers might even be able to compete with Ten Tec.

73,
Doug - W2DR

Seems like a good buy. I would like one that charges NiMH as well and would allow attaching the extra cup option.

Seems to me that the first producer of a Nicd, NiMH for ALL types of Handhelds would really have
a nice product. Would really sell well, I think. Especially if you are like most and have multiple brands and types of hts.

my 2 cents.

Hi there,
I am a final year student in EE. I am working on microwave links at 38.7GHz for my thesis. The antennas system that we use are built by Harris. It is called the "Microstar".
I would like to know more about the advantages and disadvantages when connecting at such a high frequency in telecommunication.
I am also studying the attenuation and effect of such frequency when it propagates through various type of glass,vegetation and weather.
I am trying to use some formulas in order for me to verify my experimental result with the theoretical result. However, I am not sure about which formulas in optics or microwave that I can use.
If anyone of you have more to say about this, please send an email to winston@cyber-wizard.com . Any other information would be greatly appreciated.

BTW, I hope I am posting up in the right newsgroup. If not, I would like to apologize and please suggest the right group for me. Thanks.

** I have limited excess to newsgroup, so please replying by sending an email to me.

Thanks you for your attention.

I am curious what experiences people have had with service provided by the major amateur radio manufacturers. I personally have experienced outstanding service from Yaesu. I bought a used FT-1000 a few years ago and wanted to get the latest mods. I called Yaesu and they said they would go through the radio, align it and bring it up to current specs for only the cost of shipping (one way....they would pay the return). Well, I took them up on it and within 5 business days of my shipping the radio to them, I had the radio back in my shack, working like a new radio. Yaesu was GREAT! As a result, I am a confirmed Yaesu user now and also have owned many of their other products. From what I have heard about Kenwood service.....I would never buy one.

Please let me know your experiences with other manufacturers.

Because this involves the USPS: Which inturn is a felony.

I'd reccomend you all check out tradesafe.com, you send the product to them, the check is sent to them, and upon receipt of money, product is sent. They charge a small fee ($35) for services rendered, and they hold check for 24 hours: If you call and say product is not as promised, you return product, and money/product returned to rightful owners!

I have never had anything fixed by kenwood themselves, but I had an
excelent job done by Universal Radio. Kenwood has gone to the considerable
trouble and expense of posting ALL their amateur serivce bulletins in both
text (ascii) and scanned image (JPEG) form. (www.kenwood.net)

So far it has helped me fix 3 different radios. (TS520se, TS430s, R5000).

Geoff.

Not new. Been out for about 2 years. It's a low power (300 or so
milliwatts)rig and covers 430-440, 144-146 on TX. Extended RX.
Uses 3 "AA" batteries for power, no NICAD PACKS to buy.

> TIA
>
>>>>
TIA and the group,

No matter whether it's now or later, Yaesu will eventually have "an upgraded FT-50R". Should you
wait? I think the better question is "If the current FT-50R meets your needs, why wait"? It's a lot like
saying you're not going to buy a computer 'til they bring out the "best and last CPU chip". There will
always be a newer, bigger, and better computer *or* radio coming out in a few months. I'm glad I
bought my FT-10R and FT-50R radios when I did, as I've had months of use and enjoyment instead of
waiting for the "improved" version. If you buy an FT-50R now, you get tested technology with a large
base of other users and the resultant knowledge to draw on. Buy the "beta test" of any vendors new
product and you'll have the chance to "boldly go where no ham has gone before...". It may be
an instant success *OR* there may be serious firmware bugs, tooling problems, lack of accessories,
and/or support issues to deal with. Of course, this whole dissertation was predicated on the assumption
that you're not rich and therefore can't afford to buy one of everything! $$$!

Source record: 180101

>>I was just talking to the manager of my local radio shack and heard
>>that they are coming out with a new Dual Band HT. Has anyone heard
>>any specs or any info on this new radio?

I posted the facts on this new product exclusively for us here last
month:

Radio Shack will unveil its new dual-band HT - the HTX-204 - next
month (Catalog Number 19-1124).

(Which is now this month...)

-Compact size (NOT the config. of the HTX-202/404 by ANY means!).
-120 total memories (2 x 60).
-2 Call channels (US frequencies).
-Large, backlit LCD screen.
-Six character text display.
-DTMF 15 character memory x 10.
-Cross-band repeat.
-Clone over the air.
-Seven scan modes. 3 Hold types.

At 12VDC:

High = 5 Watts
Med = 2 watts VHF / 1.8W UHF
Low = 350mW

With supplied 7.2V battery:

High = 2W VHF / 1.8W UHF
Low = 350mW

-Four modes of dual watch.
-15kHz steps.
-Programmable battery save...as low as .20mA.
-Low battery indicator, auto power off.
-RF attenuator for each band - programmable.
-Auto repeater offset

...and more.

Date: 1997-03-20 00:00:00 UTC
From: "Peter F. Christensen" <christep@mail.cadvision.com>
Message-ID: <3331DEC4.3B62@mail.cadvision.com>
Source record: 179805

Iam looking for the following test equiptment; a sweep generator, a
marker generator, an audio signal generator, and a signal tracer.
Thank you Peter Christensen. VE6LP

7385. ICOM IC-A22 Battery Pack!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: Dan Burget <ddb@pe.net>
Message-ID: <33312573.314C@pe.net>
Source record: 179806

Does anyone know where I can find a replacement battery pack for the Icom IC-A22 air band HT, besides Icom?? Icom wants $140.00 for the battery...yeah, right!! There must be someone out there making a replacement pack for less than that, or they should be (and making a killing at it!). I would appreciate any leads.

Thanks very much.

Dan Burget

I need somebody to program my radio, you need a FYG-2 Prom writer to do it. Please e-mail me your reply.

Thanks,

Ed

7387. WinRadio-Any good?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: Dmk <aries@ix.netcom.com>
Message-ID: <3331F040.602B@ix.netcom.com>
Source record: 179808

Anyone out there tried it? How well does it perform?Thanks.

7388. KW TM-V7 Schematics? Did you get em?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: akent@bga.com
Message-ID: <3331b37b.10998814@news2.bga.com>
Source record: 179809

Has anyone received shematics with the TM-V7?

I certainly did not, and I'm not happy about it either. I certainly hope this is not a trend.

Kent - KC5WPW

7389. Chinese vs. American Tubes ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: Dan K Nelson <dknelson@pacbell.net>
Message-ID: <3331CB01.3186@pacbell.net>
Source record: 179810

I have seen postings for 811A tubes of both American and Chinese manufacture. Usually, the US tubes sell for two to three times the price of the foreign tubes. I would suspect that the saying "You get what you pay for" would apply, but I am curious if anyone has had any experience with the Chinese tubes?

Thanks and 73's,

<<< DAN >>>

7391. Idea for R&D

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: Ted <ted@GetOutOfSpamFree.Card>
Message-ID: <Pine.BSF.3.91.970320172257.7313A-100000@prog1.caprica.com>
Source record: 179812

```
* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
* My domain-name in the address header is bogus! This *
* is to defeat those junk-email robots in newsgroups. *
* To send me email, you MUST change the "To:" header! *
* My correct email address to use is: ted@caprica.com *
* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *
```

Something that you mentioned earlier gave me a terrific idea!

How about a microphone kit, not just ANY mic kit, but one that has all of the following:

o A dynamiic mic element
o adjustable audio amplifier for mic element
o A push to talk key
o A standard size hanger button on back with mic-hook for dashboard
o DTMF tone generator
o A sub-audible tone generator with upto 40 tones
o A 16 button keypad for DTMF tone operation & subudible tone selection
o A function button to toggle between DTMF & subaudible tone functions
o A keypad disable switch to avoid accidental tones when speaking
o A variety of mic connectors for all popular "non-tone" rigs including HT's
o Mic wiring plans for all popular "non-tone" rigs including HT's
o A miniture phone jack to plug in your favorite CW key
o A subminature phone jack to plug in a headset mic or phone-patch output

And it could even offer users a choice of either of 3 power sources:

o Internal 9 VDC battery
o A coaxial DC power jack for external 12 VDC power supply
o 2 extra wires in the coiled mic cord to get power from the rig.*

* This option may require changing mic jack on rig to one with more pins or the 2 extra wires in cord can be wired to a seperate lighter-plug, etc.

This mic would be perfect for all of us low-budget hams who buy older rigs and HT's that don't have built-in sub-audible or DTMF tones and have weak audio. I have two such rigs here and I'm sure there are many people out there who have them to and wish they could use them on repeaters, but can't because more & more repeaters are using subadible tones for keying.

And it could be made very inexpensively with all of the above goodies! Considering parts and labor, the preassembled version could give you a GOOD profit if retailed at about $35 and or perhaps $20 for the kit.

All of the tone modules and other parts already exist on the market, they just need a plastic case designed for this particular project.

BTW: I bounced a copy of this email to the above newsgroup so you can see
the "market's" response to my idea.

Source record: 179817

Correct me if I am wrong coz I am not a Japanese.

SRP: 29,800 Yen
--> FM Dualbander
--> 2 AAA Alkaline battery operable. Weights 160g.
--> Output power 0.3W
--> 120 Memory channels with full scanning feature
--> CTCSS as standard feature
--> Repeater offset and Tone
--> Menu features
--> Independent RX/TX LED
--> 56(w) X 87(h) X 25(d) mm

I've skept those information which I cannot translate or too obvious
(like FM TX/RX). I hope this has
helped.

I think it is better to make your own? I took a 5ft helical whip
from my 11 metre days, stripped all the wire off until I was down to the
base and the fibre glass rod. Then took a piece of copper wire and ran that
up the length of the fibre glass. Tunning was a simple matter of prunning
the wire until I had maximum forward power and minum swr.
Just a word of warning. Really watch for the point of maximum
forward power. Just because SWR looks good, don't mean you have got the
best forward power. Some of my friends and myself are really wondering
about this 1:1 SWR bit. Why not try maximum forward power even if the SWR
is say 1.75:1. Trouble is that most txcvrs will shut down if SWR is higher
than 1.5:1. Oh, for the days of valves and impedances of 75 ohms.

Have recently ran into these 2 items.. What can you tell me about:

Vibroplex "original deluxe", chrome, Serial # 210628. Has stirrup lever frame, and shorting bar near handle area. Approximate manufacture date, and value? (was a bit dirty, but is being cleaned up, so condition would be "good" to "better").

EF Johnson "SpeedX", black wrinkle finish, Cat # 114-520. Also has shorting bar. Excellent condition (looks like it was never used). Manufacture date, and value?

Tnx,
Vic AA2YW

Strange, but true. The prefix a- means against, opposite; its usage
is similar to that of the prefixes un- or non-.

Examples: symmetric, asymmetric; sexual, asexual.

From: cooperjim@aol.com
Message-ID: <19970320041701.XAA10278@ladder01.news.aol.com>
Source record: 179908

I had the same problem with my 94 Saturn station wagon. I had looked at the sedans and verified that the roof was metal, then bought a wagon and found that my mag mount would not stick onto the plastic roof. hi.

The only big piece of metal is the hood. I put a cheap MFJ mag mount antennea about a foot ahead of the am/fm antennea and routed the coax into the car via the door. This puts the antennea pattern about eye level, but at low power it shouldn't be any worse than holding an HT up to your head. I use 500mW as much as possible. I dont know how bad the field would be for higher power like 30 watts. It doesnt seem to interfere with the am/fm.

Since the antennea is on the sidewalk side, I was expecting it to get ripped off if I left it on, but after forgetting to put it inside and it didnt get ripped off, I decided to see how long it would take. That was two years ago and it is still there. I just leave it sitting there all the time.

Good Luck

From what I hear Kenwood essentially has no service department that can fix
any of their equipment. I have heard stories of them telling owners of
940s that they should junk them and get a new radio because their 940 is
"obsolete" !

I wouldn't even consider Kenwood equipment, when there are competitors
(Icom, Yaesu, Alinco and Ten Tec) who do great jobs serviceing their
products. Owners of Alincos, particularly, seem to be raving about the
customer service there.

Javier,

I do not know specifically about the Icom IC970.

However, many radios are designed to clear the display,
flash (blink on and off) the digits, or set them to "-"
to indicate that the phase locked loop synthesizer is unlocked.

This can be caused by a few different defects, including
power supply problems, component failure or component aging. Sometimes
a synthesizer realignment is all that is required.

By the way, I have repaired many high-end ICOM radios, including
one IC275H, several R7000s, and a few R7100s. In all three models,
the main reference crystal changed frequency as it aged,
requiring realignment after the radios were several months old.

In one case, the crystal was too far off frequency and had
to be replaced. In another radio, the crystal failed completely.
I don't know if your IC970 has a crystal aging problem.

I can tell you from experience Ten-Tec's service department is
second to none. They bend over backwards to help you, usually
send you the new part or board BEFORE you send in the old one!
They are a pleasure to work with.

Never have I had that experience with Icom, those guys make you
feel like they are doing you a favor to work on their junk. For
that reason, I'll never own another Icom.

Hello, I am still looking for a Motorola UHF Duplexer to buy for the 440-450 MHZ Band. It is model T1504A which is a 4 cavity unit. I am also interested in a two cavity unit, but I don't know the model number. Maybe it is a T1502A ? Please give location and asking price.

Thanks and 73, Bill DiCarlo- KA2QEP

7414. KENWOOD TS-570D WARNING

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-20 00:00:00 UTC
From: Bill Stewart <stewart@peganet.com>
Message-ID: <3330D1AA.354C@peganet.com>
Source record: 179914

QST QST QST ....

If you're thinking about buying the new Kenwood TS-570D then may I suggest you think again, and much harder. I've had two of them now and both of them have a big problem.

I traded for the first one at the Miami Hamfest, also getting their PS-40 power supply, and was fortunate, I thought, to get an exchange for the rig at the Orlando hamfest after the first one failed. Now the second rig is going through the exact same problems, and they are in two different serial number series.

The problem is small at first. One time you power up the power supply, then turn on the radio, and you get the normal "Hello" display but you then find all of your memory erased. All of it. So you reset the microprocessor, reprogram everything back in, and pick up where you left off. The next step is that you turn on the power supply and the radio spontaneously turns itself on, gives you the "Hello" and memory is wiped again. Once it gets to that state it will not keep anything in meory between power down's any more.

When asked about the problem on the first rig, Kenwood said they had not experienced any problems similar to mine. Now that's it has done the same thing on a separate rig I have to believe others are or will be having the same problem. Neither Kenwood or my dealer has answered my email about this second failure, but in all fairness it's only been one day since I alerted them to the second failure.

This is a new rig, and I guess I should have bought it just like cars .... never buy a first model year. My experience with Kenwood up til now has been excellent and I hope this is an aberation and not a design failure on the whole model. But if you are thinking of getting this rig you should check with some other owners to see if this is as serious as I think it is before you buy, or at least make a deal that you can return within 90 days, as both of these units have failed within.

Best 73 !

Loaded Kenwood TS-940S/AT and MC-85 multi-rig microphone. Excellent condition, with 2 CW filters (500 in 8MHZ, and 400 in 455kc), voice synthesizer, Rapid / Slow tuning board, recently realigned, service manual, external receive (beverage) antenna jack switchable from front panel timer button (simple to reverse, no wire cutting or anything). MC-85 mic has built in speach compressor, mic gain, low bass cut, select from 3 different rigs (2 rig cables included). Rig has original box, owners manual, service manual, etc.

Great Rig, just want to play with a new one (FT-1000MP). $1250.00 including shipping to the lower 48 states.

Email: tenorman@i1.net or call days 314-235-1076, or 314-947-4155 evenings.

Courtesy tones are especially good when you're in a QSO but not paying any attention. When you hear the "blee-bloop," you know its your turn to say, "Ahhhh - Rig here is a Ya-Com-Wood with a triband Cush-Comet at 35 feet AGL, 545 feet MSL..."

Subject: RE: Alinco DX-71!!!!
Date: Tuesday, March 18, 1997 14:38

It is not a DX-71 that will be new, but a very small SSB-rig, 100 Watt=20
called "DX-701"
It has been launched in the English Amateur Magazine "Practical wireless"
Also launched a new Yaesu rig, the FT-920. A FT-1000 look like rig with 6=20
meter onboard.

UHF Power Amplifier Modules

The MITSUBISHI M67729H2 has been developed and produced in large quantities
for UHF cellular telephone applications.

Technical Data:
Output Power = 20 W
Gain = 21 dB
Harmonics = -40 db
Spurious Outputs = -70 dB
50 Ohm in/out

This module is also excellent suited for class C Amateur Radio PA's in the 70 cm-Band.
The low output of a UHF handheld may be amplified to about 20 W output! The use of these
modules is the easiest way to build a PA. There are various discriptions in the ham
literature.

I am now able to offer you this excellent module with a more than 10 dB! price
reduction:

1 ea for DM 35,--
10 ea for DM 300,--

plus postage with C.O.D. charge.

Well, I don't know where you get your information, but the Kenwood Service Center in Virginia Beach, Virginia seems to be a good one, according to people who have actually sent their rigs there.

Some of the local hams actually drive down, drop off the rig, fiddle around for a while and bring it back. Sure, it depends on the problem, but I have never heard anyone complain about the service.

I buy Kenwood for many reasons, one of which, mine don't need service. Perhaps you buy the other brands because they will break and you need service often.

well not to familiar with this beam but sounds like it is too short , you may have a setting there of pre drilled holes one for cw one for phone?? it may be set for wrong portion you wish to use ...i use a ta33 it has 2 set of holes drilled each for the above. You may want to consider trying the manufacturer on the net and ask for a copy of the instructions for spacing but sounds like it is set too short? hope this helps a bit..

Thinnet uses RG-58, 50ohm coax.... Yes it can be used in Ham Radio
Applications, since most Ham Radios/Antennas are 50 ohms

Hi Greg,

First, disclaimers: 1. I haven't personally sent a rig back to TT (yet.)
2. I'm not in any way affiliated other than as a multi-TT rig owner.

I have dealt with their service dep't over the phone. My dad and brother
have both sent rigs back to TT. Per the TT reflector, so have many other
owners.

Bottom line, as I see it: TT service is one of their key strong points,
and probably one of the key reasons they have such a following. I would
be much more concerned about the trip to and from than what happens
while at TT!

Best 73,
Marty - W7LEJ

Hi all, I have an Icom-970 and sometimes it becomes completly "deaf" in 70 cms. band and with the general coverage module occurs the same. At the same time the display show three dashes in the place of every digit. The question is if anybody who has this rig (and had had the same problem) know how to solve it.
Than you (excuse me for my english) 73's Javier EA4CMV.

The ADI's memory channels can be split into any configuration you want. I.E., you're not forced to 100 channels on each band...if you need to split 'em to, say, 140/60 - you can do it.

There's a couple other features to the ADI, also.

The first shipment of ADI AT-600 hit customs today....

Then maybe it's time to acknowledge that this group's a waste of
bandwidth. It had potential, certainly the propents made a good case
for r.r.a.e way back when during the Great Renaming; I'd opine that it
hasn't worked out and it's time to put r.r.a.e to sleep.

Or we could moderate r.r.a.e. That's the real solution, imho.
Charters without teeth are a waste of time.

I use a Standard C508 mobile because it fits so well in my small car and is easy to use while driving...

However it is only 250 milliwats out...

Is there an amplifier that can be driven by that little output power and still put out 20 watts or so???

Or do I need to find a schematic for an intermediate amp that would boost to 1 or 2 watts and then a basic commercial amp after that...

Ideas and help greatly appreciated...

Hey chaps if you look in Deja News or do an AltaVista search you'll see that I posted to this newsgroup about the IC-207H which is the version we've had in the UK for over a month now. Turn up for the books that we get it before the North American continent.

It is selling as budget dualband mobile, in the same ilk as the IC-T7 handy and has wide band receive. It will do AM on the airband 118-174MHz FM. Not sure about UHF though. It also has a detachable front panel.

I scooped you all! Bwah ha! Now I've become an attention seeker like Hershman. Off to put a noose around my neck or see a therapist for 'hershman syndrome'!

Enjoy!

Hi, I have an 8500 with the 'Smartcontroller' - it has the DTMF
keypad on the reverse so it should be as easy to use. The mic is
larger but still fits in the hand (and mine are small).
Once the memories are set up, you could just use the front panel knob
and a few of the buttons on the mic which is the I'm working at the
moment.

Is this not quite an old rig? Or is it a new improved version?

In the UK it is called the IC970H and has been around for 5 years or
so. The power levels are;

2m SSB/CW 35w
2m FM 45w

70cm SSB/CW 30w
FM 40w

Phillip Nichols (maccabeus@gatecom.com) wrote:

: The microphone appears hardwired to the rig! is it easily detatchable?
: do you recommend the joystick or DTMF mic?
: Is the joystick mic easily used for DTMF tones or harder?

The microphone is attached with an RJE type telephone plug, so it's
easily detachable.

Both microphones dial DTMF. The joystick mic has more direct control of
the radio functions, at the cost of perhaps a steeper learning curve and
a larger size (I don't find the size a problem at all, but some might).
The directional control of the joystick is a bit tricky (I think this
function could have been better implemented in other ways), but overall
the joystick mic is great at controlling the radio by "touch".

: Is the gap between the display and rig unit wide enough to put velcro on
: the back of the display for easy placement between car and home?

Sorry, I don't think I understand what you're asking. The display
detaches easily and the mic plugs into the main unit, not the display.
You'd need a cable to remotely mount the display, of course. I don't
think you could leave a velcro strip attached to the back of the display
and still attach it to the main unit, but I'm not sure.

: Is the Crossband repeat oneway AND bidirectional as in the 8000r?
: Or only capable of oneway repeat?

There is no one-way crossband repeat that I can tell, although you might
be able to fake it (somewhat) by setting an illegal transmit frequency
on a repeater split on one side of the radio. I think it would still
stop listening on the "uplink" side in the presence of a "downlink"
signal, but I've never tried this. There is regular two-way cross band
repeat.

You cannot set one side of the radio to (for example) transmit on UHF
and listen on VHF, in other words, you cannot set a cross-band repeater
split. You can do this on an FT-530, for example.

The radio can be set to listen to two VHF or two UHF freqs simultaneously.

The radio is not remote-controllable via a remote radio using DTMF
tones. The radio IS computer controllable and computer programmable (so
you could build your own remote-controller, which is something I'd love
to tackle if I had time).

: Does it have a built in duplexer so I only need to hook up a dualband
: antenna?

Yes.

Hello All !!!!

I recently purchased a Kenwood 700SP and am in need of the service
manual and a schematic. I will gladly reimburse for any expenses
incurred in getting a copy or original.

My address is :

Russ Jankowski
1880 Wagar Rd.
Rocky River, Oh. 44116-2315

Tnx es 73,

WA8DXK---- Russ

I find CTCSS decode to be invaluable. My drive to work is littered with intermod sources, and the only way to keep the rig quiet is to use the decoder. Too bad my favorite repeater does not have CTCSS encode enabled. :(Also, my Sheriff's department is on the same freq as a department about 75 miles north. The CTCSS decode allows me to hear only my Sheriff when the band opens up and the other department's signal comes blasting in.

I'm looking at purchasing an FT-8000R and for me it would be well worth the $66; YMMV.

usually the jump from 150 to 165 MHz involves a capacitor change as well
as a crystal change. no big deal, it is likely it would work with the
original capacitor, but you risk the unit being sensitive to "images"
because of the 10.7 MHz IF freq.
If there's no station on the image freq, you're OK, suffering only a very
slight loss in sensitivity.
go for the cheapie, it should work fine.

7465. New Aircraft Tracking Program for Windows

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-21 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.91.970321173021.15333E-100000@alfa.ist.utl.pt>
Source record: 179765

That's it!

The new aircraft tracking Software for Windows has arrived.

After read this presentation message please don't forget to visit AirNav URL
where you have more detailed information of the program and some
Screen-Shots.
You can also download a DEMO version of AirNav with two tracking samples.

AirNav URL
http://www.geocities.com/SiliconValley/Lakes/9420

AirNav E-mail
airnav@geocities.com

With AirNav you can understand all the flight control organization under
world air traffic
control centers: just enter flight data to the program via MANUAL MODE
(in a understandable
table representing flight waypoints and times) or TERMINAL MODE (where a
command
interpreter will decode all information given and store it into memory)
and the program will track the
flight on a map that can be done by you using one of the three map
generation commands provided.

Tracks up to 50 aircraft at the same time
160 000 position digitalized world map
Possibility of draw your own area map
Includes an editable and searchable database with over 8500 VOR/NDB
16000 aircraft editable database with selcal, registration, company and
aircraft type info
Easy-to-understand communication command interpreter
Manual and terminal data insertion modes
Estimates next enroute waypoints ETA's

More than 50 error messages make the program easy-to-use but
don't forget that for any possible
question you only have to E-mail me to airnav@geocities.com.
It's also provided a help file with over 60 topics where you can
learn and understand the usage of the program.

For more information visit AirNav URL at
http://www.geocities.com/SiliconValley/Lakes/9420

7466. Re: BEST base dual band (2M/440) antenna

Newsgroup: rec.radio.amateur.equipment

Source record: 179766
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

If you're a ham, then you should MAKE your own antenna.
A discone would serve the purpose for 2-meter/440. For big gain,
add a corner reflector. (BUY an antenna, indeed.. we hams are
going to lose our reputation for being cheap if we don't watch out :)

== XE2HLR ==

You may be wondering what XE2HLR means... It is my Amateur (HAM) Radio callsign. It is used to identify my Amateur Radio transmitting station whenever I am on the air.

Amateur Radio is a non-commercial radio service. Most Hams enjoy communicating with people around the world as a hobby, but Amateur Radio is also used to provide public service, emergency, and disaster communications in time of need, free of charge.

Amateur Radio has also been one of the greatest learning experiences of my life. Not just about electronics and radio technology, but about people, and human interaction. I continue to become more facinated with this meduim every day.

I've not been extremely active in Amateur Radio, but some of the activities that I enjoy are:

2 meter FM (local voice communications)
2 meter AX .25 1200 baud packet (computer communications)
HF all bamds

I am a member of the Federaci&#65533;n Mexicana de Radioexperimentadores, A.C., which is an organization devoted to promoting and supporting Amateur Radio. The FMRE is the principal representative of the Amateur Radio Services, serving members by protecting and enhancing spectrum access and providing a national resource to the public.

FMRE, society member of IARU (International Amateur Radio Union), that join more than 8,000 radioamateurs in Mexico, celebrates it&#65533;s 56th anual convention and we are plased to invite you to attend it. It will take place at the beautiful Port of Mazatlan, Sinaloa, Mexico, from october 23 to october 25.

The Playa Hotel MAZATLAN, wil be the place of this important event where we have the oportunity of getting togheter and have a great time with many of our good friends from radioamateur world. On the romantic Pacific where you celebrate "Fiesta" every day with the most hospitable people in Mexico, you can stay at HOTEL PLAYA MAZATLAN, one of Mexico's finest and most popular hotel.

Hotel Playa Mazatlan is located in the heart of the Golden Zone and along 4,000 SQ. meters of the best beach in Mazatlan.

The Hotel has 425 air conditioned rooms most with ocean view, satelliteTV, private balconies or terraces, its own water purification system assuring

you a safe drinkable water right down to the ice cubes in your favorite drink.

Of course, we have three large heated filtered pool and jacuzzi, excellent food and world famous friendly service, all at an affordable price.
http://www.mazcity.com.mx/playa/

Come join us....!!!!! Get caught up in the excitement of our 97
Convention.

En buen plan..... nos vemos en Mazatlan......

Mike:
They list the following dealer in Phoenix.

HRO/Phoenix
1939 W. Dunlap Ave.
Phoenix, AZ 85021
602-242-3515

However, I doubt that they have an AT-600 yet. I read here in one of
the r.r.a. ng's yesterday that the first shipment was due to hit US
Customs either yesterday or today, so it will probably be a couple of
weeks before the dealers get them. Check out their web site:

Dick,

I have an Autek WM-1 in use at my station. My take: It's a very decent buy for the money.

Yes, the meters are fairly large and there are two of them (no crossneedle arrangement -- separate SWR and power meters -- very nice). They are not illuminated so you'll need a light source at night.

Power ranges -- switchable -- 20 W/200 W/2000 W if memory serves. Reads peak and average power, again switchable. No slugs required; no bandswitching required.

I've placed it inline with a Bird 43. There are differences on some ranges and on some frequencies, but which is correct? And the differences are not large. Unless you are contemplating laboratory measurements I saw no reason for concern regarding accuracy.

You'll need to provide it with 12 volts (a wall wart is supplied with it). It has a pleasant competently-home-made feel and appearance which I enjoy. An adequate, reasonably-well-written manual is supplied too.

Of course, the Bird is the standard and is also pretty available. You'll pay more, however, for equivalent capability. (For example, if it is important to you, the standard Bird 43 does not have peak measurement capability, although it is available as an option.)

Thumbs up for the WM-1 from here!

Regards,

Mark McPherson
K7MPH

Source record: 179778

Jerry,
They are for export only. They will not be serviced by Motorola (or Atran) if it breaks. You can't even buy the service manual in the US. If you can live with that, it is a good radio, looks like the SP50 but with a keypad and digital display. The AP50 is ham bands only, the CP50 is ham and commercial bands and allows any combinations of pl's. It uses the same accessories as the SP50.
20 channel memory, field programmable, scan. Nice radio. I have a UHF and it works very well.

Bob

Not exactly, the "4" in the "H04" means that it is UHF somewhere in the
range of 406 to 512 Mhz, most likely 450-470 Mhz.

H - Handheld
0 - TX Power (0 for pager)
4 - Band (1; 30-50/2; 70-100/3; 138-174/4;400-512; 5; 800-1000
B - Receiver type
N - No transmitter
C - Power Supply (battery)

The remaining four digits are options like decoder type and such. You may
be able to get band data out of the option set, depending on the model.

Please do not forget the bandwidth that is used for AM.
Yes I do like to play....however it is our spectrum...and we must
protect it...do you really want to run AM (with the double sideband
used) when SSB is is a more conservative way of allowind for more
usable bandwidth?

From: Neil Steffen <tachyon@netrix.net>
Message-ID: <3332F77B.4DA3@netrix.net>
Source record: 179787

I live in a remote region of Montana and my Internet access is restricted by Toll Calls and expensive access rates. I have heard about the INternet being accessible with Short Wave and HAM Radois. But I am uncertain about the correct equipment and anything about Licencing or any other technical aspects.
Has anyone any experience with this, or perhaps any equipment that might be for sale ? What types of State of the Art High Tech equipment is being used nowadays ?
I have heard that High Speed access is available as well. Is their any Sites or Newsgroups or Chat Lines that deal with these type of communications ?

Thanks for your Support !

I have a 618S-1 rf amp module that I need to know the supply
voltages for, so I can build a power supply for it ?

How hard to find and expensive is it to get all the modules for
the 618S-1 to build a compleat 618S-1 ?

Dose anyone have or know were I can get a power transformer
or a power supply module for a 618S-1 ?

Dose anyone have or know were I can get a schematic for the
compleat 618S-1 ?

Any info. anyone can give me on this would be very helpfull.
Thanks.

Jim,

Err, what 10.7 IF? Granted, I haven't worked on Pageboy 1s in about 12 years, but the circuit used a formula of crystal x9 + 455 kc, and the high IF was determined by injecting the 1st LO at both the first AND second mixers. The high IF, then, varied from 16.848 to 19.738 mc (the crystal freq plus 455 kc). Image suppression was >45 dB, except the 910 kc image of the low IF, and even that was 40 dB down. There were 2 splits: 148-162, and 162-174. The one this fellow has should be fine without any cap changes to do the weather channels; I've gotten them to about 165 before I could detect any loss of sensitivity. Also, the -1103 suffix on the pager means it is a push-to-listen model; a -1107 is automatic listen, push-to-reset. You may have a hard time finding a reed on that 1050 Hz, but if you're handy with a small file you may be able to modify one that's a little above or below the tone you need. ALSO: If you're gonna want this pager to respond to a single tone, rather than a 2-tone sequence, you're gonna have to trick the decoder circuit to think the first tone has been satisfied, and install the single reed in the "tone b" socket.

A crystal from International Crystal or Cal should be around $12-15; the reed may be a toughie.

Hope this helps. If not, email me for further...I've got lots of time in on these dinosaurs.

I beleive that the general coverage receiver is fairly self contained
and therefore should not share any common synthesizer components with
the 70CM or 2 meter receivers. All modules share a common reference
oscillator though and perhaps a weak oscillator could be to blame. The
coax leads for the ref oscillator all plug into a common assembly just
behind the front panel. I would check there first and then pay
attention to the logic board which selects the module and loads the
synthesizer.
I would also recommend checking other common circuitry such as the
power supplies. Does this occur only when the affected module is the
main receiver??

By the way does any one have schematics for any of the plug in modules
including the general coverage receiver??? I am trying to learn more
about the interfaces to those modules.

I recently purchased a CSI model CS-900 phone patch to use with a Kenwood 241A but have been unable to locate the proper connection to the carrier operated squelch, cos. Can anyone help me? I still have the original shematic to help us get along together, but I do not have a service manual.

I have made connections to the mike jack to get operating, but that eliminates several functions. It also kills the audio when I have the radio set up for phone use, thus I have no radio. Can I overcome this problem??

Same way cars, cameras, women, beer, etc are rated. Everybody likes
what they like, and maybe not what their best friend likes.

A major annoyance to one is not noticed by another.

I have had good rigs from Icom, Yaesu, and Alinco myself. I am sure
that there are those who will not agree with me at all. But thats my
story and I'm sticking to it!

KAWIN NEWS #20 - Announcing KaWin 6.49 and BeaconClock 1.04

Three hot new releases this issue, and all are ready for
download from the KaWin Home Page:

http://www.mutadv.com/kawin

BeaconClock is Freeware for DXers who share an interest in
monitoring the NCDXF/IARU beacons! BeaconClock32 has now
been joined by BcnClk16 - BeaconClock for Win3.x systems.
BeaconClock32 version 1.04 includes minor refinements in the
location data for some of the Beacons.

KaWin 6.49 enhancements include:

Support for the US FCC call sign database. Absolutely the
most current database for US calls - updated weekly and
downloadable from the US FCC web site. Use it by itself or
as automatic fills and updates to your CDROM database. Have
your in-depth database and the latest vanity calls too!

Support for the ANALOG command of the new Kpc-3 Plus,
including on screen monitoring and file logging of sampled
analog levels.

The Statistics context has disappeared - but you can bring
it back any time you want.

New right-click, pop-up menu access to the Record Context
and Disconnect Context commands.

Plus, new macros and more enhancements and fixes - all
described in the Squawk64.wri file.

To subscribe to the KaWin News mailing list, send email to
stan@mutadv.com with the word SUBSCRIBE in the subject line,
or use the handy subscription link on the KaWin Home Page.
To be removed from the list, send email to stan@mutadv.com
with the word UNSUBSCRIBE in the subject line and be sure to
include the email address this message was sent to in the
body - I cannot remove you if I don't know your address!

7504. FS 40m BA transmitter setup $200 obo

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-21 00:00:00 UTC
From: moo@_NOSPAM_.midtown.net
Message-ID: <moo-2103971654180001@sl1.midtown.net>
Source record: 179804

A friend of mine who had amassed most of the equipment necessary to start a pirate shortwave radio station totaled his car, and has asked me to sell his equipment on the internet. He's asking $200 or he'll take the best offer. The boatanchor is a Heathkit Cheyenne MT-1 transmitter, which comes with the Heathkit HP-13 power supply. He'll also include a 40m RS antenna and trunk mount, a microphone and the jacks to replace the old 4 prong mic jack on the tx, a 12 volt tractor battery and battery charger, and a pair of battery clamp connectors. (He'll also throw in the 1/2 inch socket and can of WD-40 he was using to knock some rust off the tuning drum.) The ps has wire soldered onto the 15 prong jones plug, and if one wanted to use the unit that would have to be removed along with connections made between the battery and the ps and between the ps and the tx. He's handed the equipment to me to sell, and only asked that I give him his money, so you can deal directly with me. He says that if he has to break up the setup he will. The tx and ps he'll sell for $80, the antenna and trunk mount for $60, the battery for $15, the charger for $20 (or $30 for both), the microphone and jacks for $15, and the clamps for $5. Mail moo@midtown.net.

Hi. Have the following for sale

Heathkit DX-60A Transmitter
Heathkit HG-10 VFO
Heathkit HR-10 Receiver

Very good electrical/cosmetic condition.
Will sell all 3 as a unit for $225+ship from 94065.
Thanks for reading. Rob.

I have a complete HP 141T,8552B,8553B,8554B with tracking gen
model 8443A, this is a complete unit and was used by Industry Canada
as monitoring station,,I do not want to break it up ,,one plug in
does 0-110 mhz, the other goes to 1250 mhz, the tracking gen only works
with the 110 mhz module,,,
I am asking 3000 us for everything.. (includes 19 inch rack if you want
to pay the shipping)

Bill

The UHF PLL is unlocking, grab the service manual and do the lock voltage adjustment on the UHF PLL. If that does not solve it, replace the trimmer cap and / or look on the UHF PLL Board for cracked solder joints and repair them.

I do not speak for my employer, my words here are of my own thoughts.

7512. Re: Icom 781 vs 756 Spectrum Scope

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-21 00:00:00 UTC
From: Len Umina <umina@ultranet.com>
Message-ID: <01bc35b3$30fc7200$4f647392@kirk.ultranet.com>
Source record: 179833

I have a 756 and use the scope to tell if the band is open which is quick, easy and visual without tuning or noise. It certainly works for that!

I find weak dx signals not generally visible, but the preamp setting has a lot of impact on that observation, and often after you hear they guy you think "oh, yeah, now I see it".

The SM-230, according to HRO is no longer available, otherwise I'd put one on the TS-870 and sell the 756!

The one thing that I haven't heard much talk about is the over balance both of these rigs (and the 570 too I suppose) give you on receive. With the DSP in the IF my first problem was not hearing them, it was getting them to hear me. I used to run an IC-751A and if I could hear the dx I could work em. Not so with the 870 or the 756. Now I can hear them, but they can't hear me - barefoot that is - since I solved the problem with some "shoes".

This is related to the topic because although it's hard to "see" the weak ones with the scope, it's harder for them to hear you, if not impossible, without similar equipment on the other end.

The scope is great for keeping away from the big signals on the band and catching pileups.

Why would you connect a band scope beyond the filters? That would defeat the purpose wouldn't it? The scope agc is probably ok, but I'd like to be able to vary the grid resolution from the stock 10db.

Bill,

Did you use the same power supply for both rigs? It might be the common element and the cause of the problem.

Kenwood is out of the service business. Both Kenwood East and Kenwood
West are independant companies, not part of Kenwood. Icom still does
their own service work, my experiences with them have been very good,
but never got any "freebees".

I have a very long list of equipment from a friend that is helping a widow sell the
estate of her late husband. I will email you the (long) list if you want to see it.
I would post it here for you to read but I don't know how to upload the file.
If you are interested, email me at beard@acca.nmsu.edu and I will send you
the file. It has some very nice Collins, Hammurlund, General Radio and much
more. Please note: I am only a "nice guy" in the middle posting this for another
gentleman. I am not selling anything myself. The seller's name and address is
in the file of the equipment for sale.

It is NOT connected "beyond the filters". The bandscope on the 781 is
fed from the 46.51 MHz 1st IF prior to the roofing filter. Specs are 60
dB dynamic range and sensitivity of 0.32 uV with the preamp on. The
scope unit contains its own AGC loop fed from the 390KHz IF (in the
scope unit -- not a receive chain IF).

That's a very good observation, my IC-756 is also the same way.
I wish the log amplifier setting for the grid could be changed,
to select 10dB and a lower setting (5 or 2dB).
Once get the service manual, maybe I can check out the log
amplifier and its settings.
I also wish they had a better AM filter for short wave broadcast.
Looking at the MuRata Filters to get that done.

When I started looking at this newsgroup, it was because it was the only one on the list that might possible be buy/sell. The discussions are fine, but from the evidence of this group, there is a need for buy/sell. The above copied post seems to be incomplete -- not indicating WHERE one can find the buy/sell newsgroup. It might be good to repost the originally intended NG. Thanks!

Stan, I have been using the X200 antennas for several years. Both on base installations and repeater service and packet ROSE nodes. They work VERY well and stand up just as well to the real life environments of mountain top tower installations. I just put up another one last month for a new repeater that is going on the air.

They get my vote >>> Doug

(repost - 21Mar97)

I bought this amplifier from a long-time friend about 5-6 years ago.
It has been in a box most all the time since then (I went inactive
not long after he went inactive).

It has a FEW imperfections on the cabinet, but none on the faceplate.
I have the manual (NOT a copy). I have recently been able to get
back on the air, so it is now being used. I used a variac when I
first powered it up a few weeks ago, so as to protect the HV caps.

The amplifier works perfectly. I know of no problems whatsoever.
Again, I've owned it and used it now over a 5-6 year period.

Reason for selling: I have an SB220 that I've had even longer, and
since I no-longer have a Kenwood xcvr, I'm not interested in that
"integrated" station appearance. Additionally, I'm preparing to
put up a tower, and can apply the funds there.

I am happy to provide a couple of references if you feel better
with that. Any question?

Available either way: WITH TUBES $__________
WITHOUT $__________

Make an offer.

Yup. For the FT-8500, get the SmartController Mic.
It's real name is 'Mr. Potato Head'.
The Mr. Potato Head mic makes the rig easier to use than
the standard DTMF mic.

Dmk (aries@ix.netcom.com) wrote:
: Anyone out there tried it? How well does it perform?Thanks.

I have a WinRadio and love it. It's very easy to set up and has
performance similar to the AOR AR3000A. It scans at up to 50
channels per second, covers 500kHz to 1300Mhz in all modes (AM,
WFM, NFM, SSB/CW) and receives the FM broadcast band in stereo.

I use the radio mainly for VHF/UHF and find it simple to operate
and it can be used both in Windows or Dos. It even comes with information
to write your own software if you chose to do so but the original
software is well written. The radio is 100% controlled by the computer
including volume level and squelch. The squelch is a signal level type
like ICOM uses (nice feature).

Imho Burghardt Radio in Watertown S.D.does a great job of servicing Kenwood. Since they gain a lot of experience by reconditioning their used gear and bringing it up to factory specs, they really seem to be able to locate and fix problems promptly. If you want it done right, I highly recommend them for service.

(repost - 22Mar)

I bought this amplifier from a long-time friend about 5-6 years ago.
It has been in a box most all the time since then (I went inactive
not long after he went inactive).

It has a FEW imperfections on the cabinet, but none on the faceplate.
I have the manual (NOT a copy). I have recently been able to get
back on the air, so it is now being used. I used a variac when I
first powered it up a few weeks ago, so as to protect the HV caps.

The amplifier works perfectly. I know of no problems whatsoever.
Again, I've owned it and used it now over a 5-6 year period.

Reason for selling: I have an SB220 that I've had even longer, and
since I no-longer have a Kenwood xcvr, I'm not interested in that
"integrated" station appearance. Additionally, I'm preparing to
put up a tower, and can apply the funds there.

I am happy to provide a couple of references if you feel better
with that. Any question?

Make an offer --> with these tubes $_______
without tubes $_______

The choice is yours.

-Mark K0EX

7537. YAESU FT50R jacks

Can any one tell me if the YAESU 4 ring mike jacks are available from
electronics stores.
If they are what are the specs as far as the measurements are concerned.
Also what is measurement of the DC jacks. Finaly is there any publications
or news groups for the FT50R or YAESU.

THANKS,

Source record: 179662

I have owned and promptly sold Timewave DSP 59+ and JPS NIR-12. The distortion plus the aggravation of using under real time band conditions made them a hindrance. My applications may not be the same as others; 160M DXing, general HF Dxing and contesting, and VHF weak signal work such as meteor scatter. I do not use any digital modes.

The built-in DSP of the newer rigs appears to be quite decent, according to reports and comments. It probably has something to do with it being engineered into the overall product and not a "one size fits all" add on box.

The software and PC based DSP offered by K6STI has been getting rave reviews from contesters and EME operators. I just ordered mine so nothing to report yet.

Source record: 179663

Since amplifier repair is a major part of my business I have been intently following this issue for many years.

In the beginning the Chinese tubes were mostly junk. However the quality continues to improve and I buy about a dozen 572B's and 3-500Z's a month directly from the factory. There are a number of tube factories, so be careful what brand you buy from US distributors. I have found that RF Pride brand is good. I do not like RF Parts or Penta labeled tubes. I DO NOT have any experience with Chinese 8877's, 4CX250's, audio and receiving tubes, and the like.

For 811A's in particular I prefer the Russian Svetlana brand. Do not use the white ceramic base versions in a commercial RF amp; the internal C causes them to not work properly on 10M. The black bakelite base ones work fine.
The Svetlana 572B's have had major failure problems but I understand that they have corrected them. I have been a bit leery of buying any.....I'll let others be the guinea pig.

I will sell 572B's , 3-500Z's and 3-500ZG's at very competitive prices and with a full one year warranty. E-Mail me directly for prices or telephone 603-635-1170.

I saw a ham using a recent 2 meter HT the other day that had a chromed 4-pin threaded-collar ham mic connector as are standard on mobile rigs! It suprized me to see this because I thought all HT manufacturers were way too stupid to put such a good rugged mic jack on an HT, but I didn't have any time to chat so I never got to ask him what model it was. Does anyone here know of any HT's that have this?

I know I wish I had one... As we all know, those subminiture mic jacks that most HT's use ALWAYS give you trouble after the first year or two! Especially when you use that Radio-Shat speaker-mic with the two-prong connector that looks like it was salvaged from some old "brick-style" cassette recorder. You all know the kind I'm talking about.

And for that headache they charge us hundreds of bucks? Phooey!

You neglected to say where you are located for someone to know what might be near you for a referral. If you are near any Chief Auto-Parts, I have found their "Chief" brand rated at 1050 cranking amps, which is made for use on deisel cars, to perform as well as any battery you can buy without having to special-order and it has as much reserve capacity amp-hours as any deep-cycle marine battery I've seen. Actually, it looks like it actually is a marine battery except for the posts. It also is priced lower, about $80 plus tax. A marine battery that size could be 50% higher or more, since it seems that anything that has to do with boats always is way overpriced, even if the exact same thing is also sold for cars at an auto-parts dealer for a much lower price... funny how ham radio and boats have that sad story in common, huh? If I told a radio dealer that the CB antenna I bought was really going to be used for 10 Meter or 12 Meter, he'd probably double the price of it just because everyone seems to think that only rich guys buy ham equipment.

Phooey!

[guilt-trip mode ON]

Source record: 179707

Yaesu FT-890 AT Compact HF Rig with built in Automatic Tuner.
Extremely light use. Approximately 30 total contacts is total usage.
In perfect shape, like brand new with all the original boxes and
packing.

100 watts power on all HF bands. IF shift and IF notch filter. Four
microprocessors provide the easiest possible control interface. Two
independent VFOs for each band (20 total) hold their own frequencies
and modes as well as clarifier offsets and repeater shifts. 32
memories store data for the VFOs giving a total of 84 independent sets
of frequency, mode and other selections. Noise blanker, all mode
squelch, 4 function multimeter, and AF speech compressor with
adjustable IF passband shift. Iambic memory keyer for CW with dot-dash
memory.

Top panel heatsink allows this radio to run cool at all times and with
an internally switched fan, it allows full transmitter output without
any rear panel protrusions.

Add CAT control to hook this fine radio up to your computer.

Perfect shape and like brand new. $850.00, buyer to pay shiipping.

Amsat-NA is in need of donations to help complete and launch the Phase 3D satellite. Last report says we need to raise over $150,000. Launch date is only a few months away so we haven't much time. You're fooling yourselves if you believe that the money will magically appear come launch day or that someone else will donate the needed funds. I don't want to see Amsat bankrupt itself in the name of Phase 3D.

If 150 of us will call Martha at (301) 589-6062 and each donate $1,000 then we can be assured Phase 3D will be riding on the ESA rocket and not a cement weight.(cement looks good on the ground, not in space)

If 300 of us will call Martha at (301) 589-6062 and each donate $500 then we'll be able to enjoy the sounds from Phase 3D's transponders as it passes high over head.(I can almost hear it now)

If 600 of us would just call Martha at (301) 589-6062 and each donate $250 then we would have an excellent tool to use for recuiting new members into the greatest organization amateur radio has ever known: AMSAT.

If you have made a pledge to donate to the Phase 3D project and have not keep it, Martha is impatiently waiting to hear from you at (301) 589-6062.

If you have never donated to Phase 3D, you can put an end to that retched feeling of guilt in your guts by sending a donation to Martha at 850 Sligo Ave., Suite 600, Silver Spring, MD. 20910-4703

If you have never heard of Phase 3D, check out: http://www.amsat.org then call Martha at (301) 589-6062 and donate.

Did I mention that Martha likes to sign up new members too? If you're reading this and are not an Amsat member... Shame Shame Shame. Call Martha and sign up today, you'll sleep better for it.

If you live some place other than North America, send your Phase 3D donation to your local Amsat Organization(They all need project funds).

Javier...I have had mine do the same a few times over the years.
It has had to be returned to Icom on all occassions for repairs.

The problem has varied slightly but in the main has been capacitors
needing replacement on the PLL and one other PCB which I can't
remember.

Hope that helps a little.

With a call like that I'll go out on a limb and guess you may own an HF rig that you could crank down to 5 watts. If that's the case, you could do a heck of a lot worse than buying the TenTec 6M<==>20M transverter.

Best $95 I'd ever spent on ham radio.

>
>TIA

The only change in the radio (called the FT50RD - "D" as in "Deluxe")
is that the "new version" now has the FTT-12 installed (which gives
you CTCSS decode, "Digital P.L.", and DVRS [Digital Voice Record
System]) ... the radio guts are exactly the same. There is an increase
in price of approximately $40.00, while the FTT-12 sold separately for
$62.00.

If you do not need the added features that the FTT-12 gives you, buy
an "old style" unit - but do it fast, as most dealers are selling out
of them rapidly! You'll have the exact same radio, but not the
features added by the FTT-12!

Good luck!

73 to all!

DB>From: dbryndal@ashland.edu (Dave Bryndal)
DB>Subject: HT SPEAKER MIC QUESTION

The mic line is also used as the ptt keying so you'll need a
resistor/capacitor network. Try putting a .1 uf capacitor on the mic
line and a 30k resistor on the ptt switch. That should isolate the 2
lines till you key your ptt. Good luck and let me know how you fared.

Walter

>Mark Grandstaff KF7JA mgrand@bmi.net
I just got an FT-50 a few weeks ago, got two batteries, The FNB41
battery is good for 5W. Adds about 1/8 inch to thickness over 2W
version. I have found that 5W is necessary to trip most of the
repeaters in this area.(I live out in the country)

Interested in buying a Butternut HF6V or HF9V complete with
the ground mount kit. The ground radial kit is not necessary
but I wouldn't turn it down. I have a complete HF6V that needs
to be recapped and needs a 30m coil mounting tube, so a wind or
ice damaged one will do.

This will be the first antenna setup at field day this year. So
I need to find one pretty quickly. If you have one that you
want to sell, leave me an E-mail.

Thanks in Advance. N3WJA field day Chairman BARC

I have disagree with you, I have Dimond and Comet and Hustler. I have a
G6-270 that has been back to the factory twice and it still is not
right! I think that the straight G6 for VHF or UHF work great but the
dual bands that I have seen are better made by Dimond or Comet. Just my
thoughts on this.

The IC-901 will not do cross band repeat when a CTCSS encode tone is
turned on, so be sure you are not trying to transmit a tone, " T " is
not in the display. It will however pass tones from another radio
quite nicely.

Setup your desired frequencies.
Turn off the radio
Press and hold the " Check and Lock " buttons while powering o\up the
radio.
The memory channel numbers will now be replaced by a flashing " L "
and the radio is in cross band repeat.
To revert to normal just press the lock button.

Hi,

I'm sorry for the off-topic post, but I was given 3 office telephones and am trying to figure out how to make them work. They are Southwestern Bell FreedomPhones, Model FS 900 circa late 80's. When I hook them up to my wall jack, I get nothing, no dialtone. I can hook just the handset up and get a dialtone. These are really nice speakerphones, and I'd like to fix them rather than tossing them if possible. Can anyone suggest some things to try or someone to talk to who might have info about these phones and what they need to work? or even a better newsgroup to post to? :-)

Please email me at <ezavada@io.com> with any suggestions.

Thanks,
Ed

I've had my Diamond V2000 up for 2 years with no problem. Although I
think they are way overpriced for what is in them. But, its a matter of
"what the market will give". And we all know there is no "BEST"
antenna. Thats like asking what the "BEST" car is....

'Yo, Teddy!

Back up a moment... FCC Part 15 ALLOWS 100mw transmitters! All of the replies I've seen are within this specification (except for one that spoke of a 1 watt station).

30 watts(!) is a LOT of power and would attract a lot of attention in almost any community! Venice, CA. happens to be a VERY progressive beach community with many up-scale people living there... Perhaps it was word-of-mouth or just someone in the communications industry discovering the signal who then made a quick phone call to Charlie.

Please know that in most larger cities almost ALL F.M. channels are in use except for the ends of the band, where you transmitt?...

I suspect Radio Free Venice (or whatever they called themselves) caused interference to some ones favorite station and again, a quick call to our local FCC office will soon result in any 'high profile' pirate station to suddenly end their broadcast day. The FCC seems to delight in such conquests.

Strange that many Pirate stations that have tried operating in International Waters soon find armed American federal agents who will seize these maritime stations at will. And I repeat, International Waters... Ahhaaa, America... land of the free?

For years a x-ham (ex-WB6JAC ~ Richard Burton) broadcasts on 147.435 MHz Repeater at will without a valid license! Would you believe he has spent two terms in federal prison for such offences (and more) and he still continues to broadcast today?

But I digress...

Tony

Radioamateurs in Apeldoorn

Welkom op de site van radioamateurs in Apeldoorn. Nieuw is het geluid wat te horen is aan het einde
van deze pagina. Laat eens horen wat jullie er van vinden. En vooral in welke mode er een test gemaakt wordt.
Ook het VHF nieuws is weer aangepast, met het laatste VHF nieuws en tevens
informatie over meteorenscatter en contesten en bakens. Kijk vooral naar de bakenlijst
die aangepast is aan het nieuwe band plan op tweemeter. Daar zijn de nieuwe frequenties te vinden van,
niet alleen de Nederlandse bakens, maar ook van die in het buitenland staan opgesteld. Ook de
site van de Veron afdeling Apeldoorn is update gemaakt. Met daarin activiteiten als vossenjachten,
lezingen, bestuursmededelingen, repeaters en het nieuws uit de uitzendingen van PI4APD. En tevens
zijn daar een aantal fotoboeken te vinden oa de velddag en de verkoping.

De lijst van Radio activiteiten in Apeldoorn

Veron afdeling 05 Apeldoorn

7588. Re: Pirates!... was WTB stereo FM Transmitter, low power high quality.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-22 00:00:00 UTC
From: Mike <miken@dxnet.com>
Message-ID: <33344705.5481@dxnet.com>
Source record: 179745

Ted, the item you want is available and is legal to use IF you comply
with FCC Part 15 regulations.

You can order the whole document from the FCC you'll want CFR Title 17;
parts 1 to 19.

The gist of the rules applicable to what you want to do are as follows.

Do not transmit below 88MHZ or above 108MHZ. The bandwith is limited to
200KHZ. The transmitter field strenth must not exceed 250 microvolts at
3 meters from the transmitter. You cannot interfere with other stations.
No profane material.

Ramsey makes several kits which will do exactly what you want to do. I
suggest you get the digitally tuned version, as the stability of the
analog variable type is not adequate for a digital walk man.

Hope this gets you going, as it is nice to be able to mow the lawn and
listen to the music of your own liking!

7590. Have HTX-202 that won't take battery power .. help? swap?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-22 00:00:00 UTC
From: no-reply@sundialservices.com
Message-ID: <no-reply.5059.003E5FF1@sundialservices.com>
Source record: 179747

One of my two HTX-202's won't take a battery pack. It works just fine on external DC but on a battery pack it is now completely unresponsive. I briefly noodled around to see if it was a loose wire or something. A battery-pack that works fine on one radio produces no response at all on the other. The unit has not been dropped although I do notice that the pack slides a little too-easy on this one...

Never mind, this one is beyond my capabilities. Since I use these radios on camping and backpacking trips, I need the battery capability to be in good working order.

Maybe you don't. Maybe you use your HTX only for packet radio?

I really have no interest in changing unit-types (nope, I don't see a RS dual bander in my future), but I really do need a unit that will work reliably on battery power. If you really don't, and esp. if you are in Phoenix area, then please call me.

Hi folks,

I have just 'acquired' an old FT227R and by good fortune it works O.K.
but the full description is 'FT227R Memorizer'. What does the
'Memorizer' mean and how do I get it to Memorize ?

Also I seem to think that I have seen a mod' in the past to enable
25Kc/s steps instead of 10Kc/s. Does anyone know of this mod' and have
the details please ? A circuit diagram would be useful too.

TIA

My Callsign Is KC2UM,

I have been forced to discontinue my Ham activities due to a installation of a defibulator and pacemaker. My Kenwood TS520s is gone and so is my Icom 02at. Im having a bad time trying to at least end up with a low priced general coverage receiver. The big guys are out of touch with whos got the money. Being retired i have plenty time and still like to listen and still like to copy code in my head. The point.

Has anyone out there had any experience with the RS DX 394 general coverage receiver. Is it hot or not. Is it as good as the 520s. (it was extra fine) I dont plan on pooping away $300.00 for a no good. Please if you have any experience, i would like to hear from you.
E-Mail me at

kayfdrb@netcom.com

or

rrbuss3@juno.com

Thanks.

7599. ICOM W32A Clone Language?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: Marco S Hyman <marc@dumbcat.codewright.com>
Message-ID: <x72096p7gm.fsf@dumbcat.codewright.com>
Source record: 179558

Does anyone know (or know where) I can get info on the language
used by the IC-W32A to clone configuration. Getting the configuration
program from ICOM is not an option -- unless it is provided in source
form so I can compile it for random UNIX box.

I've dumped the configuration of my handheld -- it speaks 9600 bps --
and an entry looks something like:

~~nnd017010147030006000191958582020202020 2009}

My guess is that the fields are:

~~nnd: record type/header
017: memory number/index (in hex)?
01: ???
01470300: frequency
0600: offset
0: (part of the offset?)
1919: (CTCSS and PL freq code?)
5858202020202020: Alpha label coded in hex
09: (checksum?)
}: end of record mark

memory numbers 0DC through 0FD have a different format.

Any pointers appreciated.

// marc (kc7jl)

> here?
>
> Thanks,
> -Dan
Yup, same here. Notice that when you have it on the bottom it's not in
AM mode. You can't get it in AM mode. That's just the way it is.
Notice the size of the decimal point. Small is FM, large is AM.
Hope this helps. Mark, N1XYY

7602. PRO 51 CELL MOD!!!!!!!!!!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: Edward Cox <i2567@netnitco.net>
Message-ID: <3335962B.4319@netnitco.net>
Source record: 179561
Cross-posted to: rec.radio.scanner,rec.radio.swap,alt.radio.scanner,rec.radio.amateur.equipment

The following instructions are for modifying your Pro51 to recieve the full 800mhz band in the normal 30khz spacing. The poster asumes no liabilty for this modification. This modification WILL DEFINATLY VOID YOUR WARRANTY!!! It is recommend that persons performing this mod have some experience in this type of work.

Parts Required:

Radio Shack Pt#96-0267 (CELL Mod)
" " Pt#90-8100 (Speed Incease)

Tools required:

Low wattage Soldering Iron (15W)
Solder (da) ;)
Small wire clippers
Small Phillips Screwdriver
Tweezers

Step 1. Remove/Disconnect power and/or Batteries.

Step 2. Remove screws from back cover, remove back cover.

Step 3. Remove IC Board #1, (requires unsoldering of of board connectors)

Step 4. Unsolder antenna lead from Board 2 (Center Board)

Step 5. Remove Board #2 (requires unsoldering of board connectors)

Step 6. On Board #3 locate nanoconverter (N-7) located between R214 and the mezafilter (large black IC, 64 pins)

Step 7. Remove N-7, Replace with picoconverter (pt# 96-0267)

Step 8. Speed Increase- Remove large blue speed control crystal, and replace with 1000mhz version (Pt#90-8100)

Step 9. ReASSemble in reverse order.

Now you can receive full cellular, and scan at 250 ch per second. (+/- 200 ch per second)

Now I won't have to see anymore request for Pro51 Mods, Right?

Have a nice day. ;D

Hi everyone.

I am interested in purchasing a new mobile radio. I am currently looking at the Yaesu FT8000, FT8500, and the Kenwood TM-V7A. Which one will give me the most bang for the buck? Bells and whistles and reliability.

Thanks

Larry

ps: please e-mail me @ ke6bfu@west.net

Hello all,

I have large inventory of (NEW) TRW Type FRW -22 Flat wire wound 10 ohm resistors @ 55watts.
These resistors are 3.5 inches long, 1 inch wide, 1/4 inch thick. They mount in the horizontal position using
the pre assembled shaft thru the middle and standoffs that accept two #8 or #10 screws.
The resistor mounts 1/2 inch above the chassis.
These are Mil spec vitreous enameled units of very high quality.
Put them in series or parallel for many applications.

65 cents each, plus a small fee for shipping via US mail.

Let me know how many you need.

Allen

This posting is not a rebuke but a genuine request: Is there a possibility that this sort of stuff could go at the end of postings?

This request is to the several people who now are putting these very announcements at the start of all their posts. Maybe I'm alone and maybe not, but I scan the first page of an article to see if it's interesting. And if the first page says nothing about the contents then it's a waste of time even pulling it up. Please move these repeated large notices to the end of postings near to, or better yet, after the sig or bye-bye to these posters and hello kill file. And that's probably more my loss than theirs.

If posters really want something right up-front, a compromise might be just a one-liner at the begining which says that information on the correct reply email address is at the end of the article.

Regards,

Yes and yes.
This charges the battery. You should remove the battery when powering
from 12V.
The biggest problem is not memory, but overcharging. Running from 12v
for extended periods will overcharge and quickly ruin your battery.
Too bad Yaesu doesn't make a false back for mobile use.

Hi Mike,
I have one of those pocket morse code tutors and find it to be well
built and rather useful.

It has taken away the lulls in my practice, for those times when I
cannot practice on the air or at my computer.

I showed it to one of our Novice Class proctors in the Club which I
belong and he complimented the clean tone it generated.

Like anything else, if it is used and gets you where you want to be, it
is a worth while investment. It will certainly not replace the
excitement of on-air learning though.

Good Luck,

Robert Robinson, KB2PSM

```

Nobody mentioned the angle that AM, as a technology, is very much alive and well, and that modern AM transmitters, as applied both on medium- and high-frequency broadcasting, are marvels of high-efficiency digital signal processing. This is as contrasted to CW, which has no commercial or defense future.

How many amateur AM fans are conversant with where this technology is today? To my knowledge, virtually all modern amateur transmitters do AM as a stepchild of SSB, rather than using the best modern approaches to synthesize an AM signal.

Just stirring the pot ...

>
> ..Thor Harald..

Very Good Morning Thor -- Building the transmitter is fairly easy -- but the receiver is much more involved. With the transmitter -- a stable oscillator circuit is keyed on and off. See back issues of QST and CQ magazines for construction articles.

Maybe take a look at the QRP Links of my pages at URL:
http://pw2.netcom.com/~ac6v/pagew.html#Q

Also there are several kits available -- see URL:
http://pw2.netcom.com/~ac6v/pagef.html
Look for Ten Tec, Ramsey, try Jade and some others there.

Also in most areas of the world -- you will need a license in order to send transmissions.

Good Luck

Go to oak.oakland.edu, in the /pub/hamradio/mods directory. There is
a document that will tell you how to perform the small bit of minor
surgery necessary to tap the discriminator. I tried it on mine, and
it works fine.

7634. screwdriver antennas

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: sandelkw@alaska.NET
Message-ID: <199703231744.IAA14075@calvino.alaska.net>
Source record: 179627

After considering the limitations of the different HF mobile antennas I've settled on the screwdriver concept. I would like to hear from the owners of the TJ or High Sierra or other commercially produced screwdriver type antennas. I'm particularly interested in the relative merits of the their 'decoupling' systems (copper fingers v. SS spring), mast construction (CU v. AL) and loading coils. Power requirements are 500 watts PEP. I might consider making one but lack the equipment so this is my last choice.

Here's the TNC hook up for the Radio Shack 2m HT:

```
TNC Radio
=== =====

Audio Out -----------||-------------- Tip of Mic plug
C1 |
|
PTT Line ----\/\/\/--------| Ring of Mic (not connected)
R1

Audio In --------------------------- Tip of speaker plug

Ground ---------------------------- Ring of Speaker plug
```

C1 is a 0.1 mfd capacitor of any type, R1 is 2200 ohms.

>>
>> Chuck those old tube rigs, go for solid state!

Yah, well, maybe.
Is that why we see so few replacement transistors?
Have you been suckered by sales hype?
Did you BELIEVE religiously when you were told that the
transistors had no theoretical service life limit?
Did you not notice that anything that flexes gets fatigue?
That anything that passes current flexes?
That transistors wear out?
I had a HT-40 that had the original tubes except the final
when I got it, and when we parted, and that is a long time.

I don't think the 50 ohms is transistors, but circuits.
Only my opinion, but I have designed a circuit or maybe even two.

Transistors are much more vulnerable to mistakes.
Transistors are much more vulnerable to several other things.

Generally, transistors are better, but there ARE some glaring
exceptions.

Whether you should go Tube or Tranx depends on what you
want to do.

I have read the replies to your request. they are self defeating.
They will have you spend more on just getting started than I
have spent on Ham Radio in the 30-odd years I have been
messing with this stuff.

May I suggest?

Don't accept as gospel the words of people who never
wanted to know the answers to the questions you ask.
Instead, research the question for yourself.

Write ARRL in Newington CT, and ask for the name of
an ELMER, or volunteer in your area. If your Elmer, or
tutor, wants you to spend money, find someone else.

You say you've been interest4d but never had the money.

I recently saw a TV by a garbage can and showed a 14-
year-old boy how to make it into a CW transmitter.

We found a receiver at a yard sale for $2.

He is able to get on the air, and is able, when he gets his
ticket, to talk to people in India. When He gets his ticket,
I will help him put up a transmitting antenna.

He will actually be an engineer and will have some idea
what he is doing, and will still not have spent $20.

If you let the others get you to spend all that money on
Japanese complexity, you will miss most of what the
service is valuable to you for.

Think about it.

You might get to like it.

> (no flames intended)

The suggestion that adverts with prices are any more welcomed in this newsgroup is a minority view. This is a discussion newsgroup where folks post and read in order to exchange opinions and facts on ham radio gear. The adverts group to buy and sell gear and which is closest connected to the rec.radio.amateur newsgroup hierachy is named rec.radio.swap.

As to posting prices, if you do you'll get the price police criticising your judgement and if you don't you'll get the non-price police moaning that they are helpless to know what your stuff is worth. So just do your own thing, but please only do it in the right place.

Regards,

I have a manual for tr-44 and the colors are the same.I cant
identify the controller but it is the original one.The wires are
connected pin to pin
1 - 1
2 - 2 ect...
If you need more info i can go on the site where is a setup
and look at the controller to find the model.I it written CDE
ANTENNA CONTROLLER in the front of it.
I have tried the email adress you give but i have an error
reported.

Has anyone had any experience with an 48", 10-11 merte antenna called
" GROUND ZERO)? It is advertised as being an 1/2 wave that is
independent of vehicle grouding...says twin-ring tuning that works
well on 10 meter SSBB. If this a valid comcept it just may fit of my
needs of switching between the truck and motorcycle.

Message-ID: <3335A55A.4691@arcticnet.no>
Source record: 179649

This is a WEB-page about the NorCal 40A CW-Transceiver. Will someone reply to me, and tell me if this is a good choice for a transceiver?

----------CUT----------
The revision B NorCal 40A is a third-generation 40-meter QRP transceiver kit, designed by Wayne Burdick,
N6KR. The rig covers any 40KHz portion of the CW band, with a very stable VFO operating in the 2MHz range.
The receiver is a superhet with crystal filter, AGC, and RIT. The frequency coverage can be increased up to
150kHz with one capacitor change. Since varactor tuning is used, a 10-turn potentiometer can be substituted for
the supplied 1-turn unit if better tuning resolution is desired. (If you make this modification, we suggest using the
KC1 Keyer/Frequency Counter for keeping track of your operating frequency.)

The first batch of NorCal 40A's had significantly better performance than the original NorCal 40, having more
AGC range, a more stable VFO pot, and a more sensitive receiver that would drive a speaker directly. The
Wilderness kit (revision B), besides having a painted and screened enclosure, has a number of additional
refinements. These include improved receiver image rejection, better-sounding AGC and QSK, and a bit more
power output (around 3 watts with a 14V supply).

Receive-mode current drain is VERY low--about 15mA--leading to long battery life for portable operation. The
transmitter puts out 1.8 to 3 watts, depending on supply voltage, and has full QSK.

Physically, the rig is very small (2.25"H x 4.5"W x 4.5"D), about one-half the volume of an OHR Explorer. One
double-sided, screened and plated through PC board is used. There is NO chassis wiring: all controls and
connectors and even the case parts themselves mount directly to the board, resulting in an uncluttered interior.
The custom .060 case is quite rugged, and is designed to allow the top and bottom to be removed easily for
alignment or test. Long-life plastic latches are provided on the top so no screwdriver is needed to access internal
controls.

The '40A has plenty of empty front- and rear-panel and interior space for your modifications. Wilderness Radio

encourages you to customize the '40A, and will continue to provide support, even if you put it on 80 meters or some other band! The rig comes with a professionally-written, 30+ page assembly and operating manual.

What others say about the Norcal 40A

"Most of all, however, it was the quality of the kit--board, silk-screening, and case--and the excellent manual, that really made this a great FIRST kit for me. Wayne and the NORCAL gang really deserve an enormous hand for their efforts...kit building has been something I always wanted to get my feet wet in, and this was a fine, encouraging introduction." -- Matt, KN6CR

"I continue to be amazed at the receiver...I often put a separate 40m antenna on the NorCal and on my Yaesu 990, then stick one earphone from each rig on my head. The NorCal is much, much quieter than the 990. Weak signals are far easier to copy on the NorCal. I've told friends of this phenomenon, and they just don't believe me. I think you have to hear it to believe it." -- Bruce, AA6KX

NorCal 40A compared to similar kits:

-By far the cleanest construction of any low-cost kit.

-Much lower receive-mode current drain than the OHR Explorer and most other kits.

-Rock-stable down to a battery voltage of 9.5V.

-Compared to the SWL NE40-40, you'll get much higher performance, plus all the controls and connectors, no chassis wiring, and a custom, painted/screened enclosure

-Proven highly stable in the field due to its ultra-low frequency VFO

-KC1 Keyer/Frequency counter is tailored to the '40A, providing much more functionality than Curtis 8044-based keyers

NorCal 40A Pricing

The new Wilderness NorCal 40A is $129 plus shipping ($5 U.S., $10 Canada/Mexico, $15 DX).

>vice-versa ?/

No Mau you cannot speak on VHF and listen on UHF. The FT-50 in NOT a dual bander. It has two bands, one at a time. It will transmit on either band but not work on both bands at once.

I do satellite communications demos at hamfests and need the full duplex feature. I tried all the current radios at AES in Las Vegas the only current production radio that will do what I need is the FT-51r.

I have a C128D, a TNC, and Digicom V3.51 for Comadore. Does anyone know the commands to run Digicom?...I sure can't figure it out....it's been a long time since I had to use it to use a Comadore to remember even some of the Comadore commands.

7669. Problem with TS-940S Display

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: DWINN@TNG.NET
Message-ID: <3334abf0.0@news.tng.net>
Source record: 179676

I have a problem with my TS-940 and was wondering if anyone else has had it.

All the frequency digits change from numbers to decimal points. If the frequency is changed, the correct display will appear but return to Decimal Points within 2 seconds. It appears most controls that are read by the processor will make this happen. I have a late model (S/N 9090038) which should not have the sockets for the processor or ROM.

I have tried to reset the unit but no help.

Does anyone have a suggestion where I should start looking??

Thanks Don AF4Z

I had the FT-51. I liked it better because you can receive two
frequencies on either band at the same time; where with the FT-50, you can
only receive one frequency at a time with checking on another frequency ,
kinda like prioity...

I would go with the FT-51 if money wasn't a big issue...
KC5CYQ

P.S. If any other questions about the FT-51, just ask :)

Rich -

Sorry to hear of your health problems...but won't your physician "clear"
you for at least low-power activities?

This might be a case where your heart specialist knows nothing about
Amateur Radio. (Please don't get your hopes up - I know very little
about defibs and pacemakers - but I sure would want to find a physician
who at least understood what Amateur Radio was all about FIRST before I
took my license off the wall!)

Best of luck to you, Rich!

7675. Yaesu FT-50R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: dan@w3eax.umd.edu
Message-ID: <5h2bd1$p6e@hecate.umd.edu>
Source record: 179682

I have an FT-50R, and have three questions about it:

1) The battery seems to be charged through the radio. There are two sets of ports on the battery, one on the bottom and the other where it joins with the back of the radio. Would it be possible to make a connector to directly attach the battery charger, or is part of the charging circuitry in the radio?

2) The manual states that it does not recommend you run 9600+ baud packet on the radio. Is there a particular reason for this? Perhaps that the audio both in and out of the radio is too heavily filtered? Is it possible to modify the radio to bypass the filters?

3) Since the keypad is removable (and replacable), and there is a connector on it. I would think its reasonable to assume one could set up a computer or external device to emulate a keyboard. If this were hooked up to a computer you could theoretically get computer control over the radio. Anyone have any ideas on what the keypad has control over (presumably the audio as the FTT-112 has DVR)? Or better yet, a pin-out, or description of the interface?

dan

7679. Re: Help needed (Microwave links at 38.7GHz)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: Michael Aust <maust21401@earthlink.net>
Message-ID: <33357AA7.5BD6@earthlink.net>
Source record: 179686

Going thru my notes, there is a company out of Washington D.C.
called MIL 3, Inc which has a software package for RF/Microwave
links for propagation.
The program is called PMod with MIL 3's OPNET to form PMod/fc
Propagation Modeler/Forecaster, the indusry's first commerical
application supporting network simulation incorporating atmospheric
propagation effects.
Tgeir program allows the user to include the effects of weather in
simulations of wide area networks with multiple satellite hops. It is
also capable od modeling the effects of rain, water vapor, clouds and
oxygen on any satellite to ground , or ground to ground link and is used
for many fundamental propagation calculations.
You can e-mail Dr. Lou Ippolito, who has developed PMod, and also try
his associates, Edward Yeldell and Glenn Feldhake at the e-mail
address below:
info@mil3.com
They have an Internet e-mail address at http://www.mil3.com

As a Engeeering student, they may allow you to get an evaluation copy,
many software companies like to get engineers in Universities to
get dependent on their software.
Their hope is that once you start working in the industry, they
hope that you will purchase it from them on your new job!!

PMod is part of Stanford Telecom, providing the OPNET Partner Series
Software for Communication Engineers!!

I hope this helps you out.

Mike Aust
WB6DJI

RF/Microwave IEEE Wireless/Celluar ASIC Engineer

Ask for an evaluation copy for what platform that will accomodate,
these guys probably have scores of IEEE papers out there and may
help you getting reference material also.

7680. Learning M Code: HFJ Tutor of value?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: morchar@pacifier.com
Message-ID: <morchar-2303970244020001@ip76.van3.pacifier.com>
Source record: 179687
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Does anyone have experience with a product called the MFJ pocket size Morse Code Tutor?

I would like to learn code in a way that allows me to make use of short sessions several times a day, and don't have a laptop computer.

This product has been advertised in the most recent issue of Amateur Radio Trader, but I am always reluctant to buy a product without objective opinions from happy or unhappy customers.

Please send all responsed to my email if possible?

Thanks,

Mike Orchard KB7SUE

7681. KISS PROMs for PK80

7686. Seeking HF Opinions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-23 00:00:00 UTC
From: leader@aztec.asu.edu
Message-ID: <5h1vag$279@news.asu.edu>
Source record: 179693

As motivation to pursue a higher lisence, I am thinking of purchasing
a HF unit to listen to while I study.

Being a student, the cheaper the better. I was hoping maybe some of
you seasoned veterans of HAM radio could suggest models which could be
purchased within the $300-400 range, or less if possible.

I would really prefer to find something "somewhat" portable, and WITH OUT
tubes... :)

Also, any suggestions as to what should be avoided would be welcomed too.

Thanks in advance,
JC

Announcing NEW
Ham Radio.FAQ

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

If this is not of interest to you, please accept my apologies for intruding on your newsgroup and ignore this. If this is a pictures newsgroup I will follow this post up with some tasty pics. I hate spammers as much as the next guy, but we're talking about some very easy money to be made !! If you are still interested (and YOU SHOULD BE)......

-!!!-PLEASE READ THIS VERY IMPORTANT NOTICE- NOW!!!
!!! MAKE MONEY-LEGAL AND EASY WITH YOUR VERY OWN MAILING LIST BUSINESS!!!
THIS IS THE FAIREST, MOST HONEST WAY I KNOW OF TO SHARE THE WEALTH!!

Hello! Would you like to make thousands of dollars,quickly, legally, with NO CATCH? Then keep reading.... Please take a few minutes to read this article, and it just may just change your life. I SWEAR I'M NOT LYING TO YOU, ANDTHIS IS NOT A SCAM! If you're interested, please, keep reading. If you're not, then, again, I apologize for wasting your time.

The following concept of making money with your computer essentially began in the US and has now spread throughout the Western World. It is perhaps unique inasmuch as there's no risk - people from all over the world are currently participating and those that follow the initial concept are earning large amounts of cash.
Read the following carefully and you too could be joining the many thousands of Internet users who are currently earning quite reasonable sums of money with a few hours work using their computers via the Internet!
****
This posting has been appearing for quite some time and has now literally got thousands of people actively involved. No doubt like me, you may have seen it before and become a little confused by the way it's been explained. However, I personally have never believed in a so called "Free lunch" and have always worked hard to support my family. But this idea is so simple involving only a modest $5.00 investment that I simply had to try it. At first, it took me quite a while to figure it out - my first impressions led me to believe that there must be some catch to it. But this isn't so, you only have to look at the various postings to realise this; the thousands of postings that are made all carry different names and addresses. So with so many people involved I became convinced that with this particular program I too could benefit. Although many of the postings have been modified the

basic principal remains the same, in my opinion the only problem has been the way the initial concept has been repeatedly changed.
With this in mind I have set out to explain what I consider to be a clearer version, in the hope there is no doubt in people's minds that it's fully understood. Because believe me, this system does work!
****
Essential Information to Assist Your Success!!

These articles have been modified over and over again, and embody over exaggerated claims of vast earnings. While this cannot be disputed it is essential in order to receive the attention of those who read it to post an article that gives out the right signals to the recipient. I believe this article does just that, it's not full of unnecessary $$$ signs, neither does it contain ridiculous claims which only puts people off. If you want to get started right away, simply amend the address section by removing the top location and place your own name and address at the bottom.
****
In general, these postings lead you to believe you can make $50,000 within a month, which I think is a little over the top.
But now after only a few day's of my initial involvement, I'm beginning to get a reasonable and realistic return with a further understanding of just how big this concept is. The money is coming in from all over the world, and sure comes in useful but what's more important is the fact I have proved this to be a totally workable and legitimate system, involving no risk and no major cash outlay.
My other concern was the legal aspect, so I checked this through and was told that providing I mail one dollar to the person I am asking to put me on their mailing list, I am in fact paying for a service. And that service consists of using the Internet to advertise a business.
So what is this business? Well this business is to do with assembling a mailing list of people who are interested in working from home using their computers to generate an income.
****
Ok...if your interested there are three basic steps: All of which are pretty simple. Think positive, after all, the people below became involved just like you!

Let me tell you how AND WHY this works .. also, MAKE SURE YOU PRINT A COPY OF THIS ARTICLE NOW, so you can get the information off it as you need it.

STEP 1:
Get 5 seperate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." (In this way you are not just sending a dollar bill to someone, you are paying for a legitimate service.) Fold a $1 bill inside each piece of paper with your name and address on it, and mail these 5 letters to the following 5 addresses:

1- SRO Services
PO Box 909
Puunene, HI 96784
USA

2- Aumakua Enterprises
PO Box 277-316
Kihei, HI 96753
USA

3- Ross McCrindle
2-28 Cambridge St. S.,
Lindsay,Ontario
K9V 3B6
Canada

4- Sean Ringle
PO Box 1
Lanesville, IN 47136
USA

5- Ron Campbell
106-1309 West 14th Avenue
Vancouver BC V6H 1R2
Canada

STEP 2:
Now take the #1 name off of the list that you see below, move the other 4 names up. (5 becomes 4, etc.) and add your own name as number 5 on the list.

STEP 3:
Change anything you wish to, but try keep this article as close to original as possible. Now, Post your amended article to at least 200 newsgroups. (there are around 19,000 groups). All you NEED is 200, but remember, the MORE YOU POST , THE MORE MONEY YOU MAKE!!!

You are now in the mailing list business, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return will be. If you wish to remain anonymous, you may use a pseudonym, but make sure address is correct.

LEGAL ???

People have thoroughly discussed whether this is really legal. You are using the Internet to advertise your business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online businesses and methods of generating income at home.
REMEMBER - people send you small fee to be added to your list. It is legal. What will you do with your list of thousands of names? That's up to you.

HERE IS WHY THE SYSTEM WORKS:

The internet is growing at a tremendous rate - it doubles in size every 4 months. Think about it. You see those "Make Money Fast" posts more and more. All that growth means potentially big profits for everyone who participates.

Of every 200 posts you make, you should receive roughly 5 responses. That probably doesn't seem like much. You make $5.00 for every 200 posts with your name at #5.

Each person who sent you $1.00 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average, 50 people will send you $1.00 with your name at #4. That's $50.00

Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return 500 people=$500.00. They make 200 postings each with your name at #2=100,000 postings=5000 returns at $1.00 each=$5,000.

Finally, 5,000 people make 200 postings with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES ONLY 200 POSTINGS! Potential income in one cycle = $50,000.

REMEMBER THIS ---- thousands of people all over the world are joining the internet every day and reading these articles every day just like you are now. So can you afford $5 dollars and see if it really works??? I think so.....

Lets review why you should do this. THE ONLY COST IS $5.00, 5 STAMPS, AND 5 ENVELOPES. Anyone can afford $5.00 for such an effortless investment with such SPECTACULAR RETURNS.

There are millions of internet users, and millions of new net surfers every month. REMEMBER - read the instructions carefully, and play fairly. THAT'S the only way this will work. Get a printout so you can refer back to this article easily.

Keep a list of everyone that sends you money, keep good books, pay your taxes, and always keep an eye on the postings to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER - HONESTY IS THE BEST POLICY. WHAT IS $5.00 TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50.00 or $5,000.00?? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY

Doug, you're right. PL tones are generally fed into the wiper lead of
the deviation pot, so that they're inserted after the voice audio
bandpass circuits. Trying to stuff enough PL amplitude into the Mic Hi
lead to modulate the TX will make for horribly distorted stuff, and may
even load down the mic audio by the time enough isolation is removed
from the PL encoder to bring the level up.
However...if somebody had an extra lead in their mic, and an unused pin
at the connector...that could be wired to the right injection point.
Hmmm...I like it :)

Sorry about that! I'm alphabet-impaired.

Actually, that url is to view ATI's new AD-600. If you want to see
ADI's new AT-600 (which is really the better choice of the two), then
you are absolutely correct. :-)

>on 12 volt converters?
>Rick

Hi Rick,
My home base is solar powered. I use Trojan 105 (I think that's
them), 6 volt, 200 amp-hour, golf cart batteries (deep cycle). They are
very easy to find. If you hook up two in series you get the full 12
volts. Maybe you don't want 120 lbs. of batteries to get 12 volts?
Don't know about that, but my setup has been very successful. I've even
taken two from my array of six with me on a trip and charged them
separately when I returned home.
Hope this helps.

Indeed they do make a false back. I believe its called a PA-17 battery
extender. Its actually designed to clip the battery on your belt with a
cord up to the back of the radio. Could be easily modified though.

It memorizes a *single* channel. I forget the circumstances, but it's labeled on the front panel in a way that makes it pretty easy to remember. You need to supply it with a continuous 12V supply for it to maintain the memory.

If there's a 25 khz mod, I haven't seen it. The radio tunes in 10 Khz steps and will do a 5 Khz offset, so it can tune a 25 khz channel, or at least the US version can...

I had this trouble with one of my HTX 202's shortly after purchase.
The battery was not making good contact with the radio. The Radio
Shack store where I purchased the radio exchanged the battery for a
new one which worked fine.

>I have tried to reset the unit but no help.
>
>Does anyone have a suggestion where I should start looking??

The problem isn't the display - it's the PLL - all dots in the frequency
display indicates no PLL lock. The best place to start is checking the
power supply to the PLL board - if it's low in voltage, the board will
never lock. Sadly, it could be time to get a schematic and a frequency
counter out!

>So can I speak on VHF and in the same time listen on UHF and
>vice-versa ?/

There's a comparative review of dual band handhelds in the latest Radio
Communication (RSGB journal), April 1997, pp 16, 17 & 20. It clearly
states that the FT-50 and Icom IC-T7E CANNOT receive on VHF and UHF at
the same time.

Warning: I've never used either of these rigs - I have a Kenwood TH-79E,
which will receive on one band whilst TRANSMITTING on the other (taking
suitable AF feedback precautions!). It's quite good fun running 70cm
packet and monitoring the local 2m repeater at the same time. Even CTCSS
decode seems to work on both bands simultaeneously (if you have the
CTCSS module).

IF this is the antenna made by antron it is a decent antenna for
difficult situations, i sold a couple to people fho used them in wooden
airplanes, motorcycles, even had a customer use one as a apartment base
antenna. they tuned easily by adjusting the posisition of the feedpoint
on the antenna, which unly required loosening four screws .

7722. WARC for SB221??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: "Roger A. McCarty" <rmccarty@deltanet.com>
Message-ID: <33377756.24B8@deltanet.com>
Source record: 179531

Does anyone know of anyone with WARC band kit mods for the Heath SB-221?
Thanks

Roger KD6CC

++
If you have used the radio on an external power source with the battery
pack still attached there is a good possibility that there are some zener
diodes blown in the radio. This was very common on the early 202's that
were marked "Realistic" on the front.

If you can locate a good condition Ten Tec "Argonaut 509" or "Argosy" I
think you'll fulfill both your wishes, JC. They both have superb
receivers and are very portable. Either model should be available for
under $300. The "Argosy" is essentially the same radio as the "Argonaut"
with the addition of a power amplifier for about 50 watts output versus
the 5+ watts from the "Argonaut." I worked the world with an "Argonaut"
in my mobile a few years back.

I would advise to NOT use these chargers, Sam. The current capability of both units far exceed the maximum safe charging current for the NiCads in the 202's battery pack. The packs get quite warm using the standard 200 mA charger; imagine what a 1000 mA charger will do. If I have the time I usually charge my 202 with a 50 mA supply: Much kinder to the NiCads.

73,

Gary

"allot" means to distribute assigned shares.

7729. FT50R Software MOD's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <5h5ilg$le0@news00.btx.dtag.de>
Source record: 179538

The Problem:

I have bought a FT50R a couple of Days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the Solder Jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to Pull the
adapter Cable out of the radio, ..., that don't work.

RT Systems say:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

Information and explanations:

All MOD's can be made by Software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file only)
I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
Job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different Hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file from an other Unit with different Hardware configuration,
the Unit will be assigned to this new configuration.

First a description of Terms and Positions:

1. Current_Byte
This is the Byte that tells the current Status of the Rig, you can get
this Byte as follows:
- Make a .TPL file from the Rig.
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E3 is the sequence 07 XX
^ Current_Byte is the
second

- The Current_byte can be in the Range from 00 to 06.
- the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (but very rare)

2. Key_Byte (Security Key)
The Key_Byte is at the same place as the Current_Byte.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte. Just change with the HEX Editor the Key_Byte of the .TPL
File you want to upload to be the Current_Byte and you can Upload
anything
(any .TPL File) to the Rig. !!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change
this)
(byte also (in the .TPL File you intend to upload) to be the same Byte
as)
(in the Template you have just made to read the Currend_Byte.
)

3. Band-Set_Byte
- Edit the .TPL file you intend to upload with e HEX Editor
v Sub_Band-Set_Byte
- On Address 0CE9 is the Sequence 07 XX XX
^ Band-Set_Byte
This Byte tells the Rig to switch to Band XX (XX is a Nr. between 00 and
06)
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means
if you
want to upload later something else to the Rig, you have to change in the
.TPL File you intend to upload the Key_Byte to the new Currend_Byte (with
the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see
Table)

Now, to do a Band change do as Follows:
- read the Current_Byte (as described in 1)
- set the Key_Byte to be the Current_Byte (as described in 2)
- set the Band-Set_Byte to a Number from 00 to 06
- set the Sub_Band-Set_Byte to a Number from 00 to 03

So here are the MODS (Band's) available:

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
----
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I
05 I H1 H2a H2b H3 I
06 I FrEE FrEE FrEE FrEE I

```
--------------------------
^ Band-Set_Byte

When you set The Rig in a Band (with the Band-Set_Byte) then you can
switch
from Sub Band X1 to X3 with the Key Sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prSF) and then
Press
The Function Key to switch to X1 Subband

I have not discovered yet the Key Sequence to switch to X2a and X2b.

The TX for the X3 Bands are:
BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540 (it will TX from aprox. 118-233)
( and 312-508)
( RX from aprox. 71-999)
( depending from the Rig )

The Sub Bands 1,2a and 2b are with Restriction variations in TX and RX
and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting for us.

Discussion and further examinations:
-----------------------------------
If you examine the .TPL File after Uploading it to the Rig and
Downloading
it, you will notice same changes in the .TPL File, that means that the
Rig
has same Initialization Software in it's ROM and that by changing the
Band-Set_Byte and Sub_Band-Set_Byte you can force the Rig to init the
desired Mod. Just beyond the Band-Set_Byte (at Adress 0E12) are the
possible Frequencies at those you can TX.
You can not change them directly, the Init Pocedure will always overwrite
them. (The init Procedure is allways executed after Uploading)
That means that in the ROM there is a Frequency Table and the
Band-Set_Byte
and the Sub_Band-Set_Byte are Pointers to that Table.

In the past days while experimenting everything happened, I have made a
state where the RED diode was always Lighting when Pushing the PTT.
(The S meter was also showing TX) but shitttttt, in the state of happiness
I went out to smoke a cigarette (my wife forbids smoking inside) and
when I come in I forgot what I was doing, I upload e wrong .TPL and
```

I lost this State (damn, Quit smoking)
In the happiness I was just jumping around and forgot to use the
Radio Scanner to examine if the Unit was really TX on all Frequencies
or it is just showing so. (stay cool)
So I can not guarantee that this MOD I thing I had, is really possible.

I often get also in MODS where on 144MHz the Unit was acting as in
the FrEE MOD at 80Mhz (the Green LED Leigh's a short time). So there
is maybe an other Software (or Hardware) restriction.

So there is a possibility that there is more and that the FrEE MOD is
not really the FrEE MOD, it can be also a Trap for people like us to
be happy and stop playing with the Unit.
It must can TX on all Frequencies, even 0.01 miliWatt, but it has to TX,

There are 2 Ways finding that out:

1. There is maybe a part of the Table outside of Band-Set_Byte 00-06 and
Sub_Band-Set_Byte 00-03, there is maybe a Number like A6 and F5 to
switch in another MOD.(like a Back door) far away from 06 and 03.
The Number 07 before the Band-Set_Byte is also doing something, if you
assign this Byte to same Values than the Initialization Procedure will
set the Band-Set_Byte and Sub-Band_Set_Byte to same standard Numbers.
The 13 Bytes after the Sub_Band-Set_Byte are not changed by the Init.
Procedure when Cloning is finished, they might be also same
instruction.

2. There must be a way to simple PEEK and POKE to the Unit, in other
words
to read and write direct to the Unit and bypass the Init. Procedure
and
directly change the Frequencies and other things. If same one find
this
,please Email me immediately.

I have uploaded to the Unit a lot of Nonsense in the past days, it
becomes
strange, block's, ...,
Whatever happens the Cloning Procedure is in the ROM, you cant's damage
it.
you just have to remove the Battery, hold the Know and PTT key, insert
the
Battery and you are in Clon Mode, make a Template, read the Currend_Byte,
(and the bytes before it), make the changes as described and upload a
usual
Template. And the Unit will switch to normal again.

Until now I have discovered a couple of other Things but I'll first
examine
them closely before releasing them to the Net.

Now I NEEEEED your help: I have the ADMS 1C 1.05, this version has not
the

Possibility by starting it with FT50.EXE /DEBUG to get into the Debug
Mode
and Damn, I need that. So Please someone ZIP the FT50.EXE and FT50.HLP
from a older Version (I thing that 1.04 has that Possibility) and send
it to me by Email, I thing that it is no crime sending it to me, because
I have bought the ADMS 1C 1.05 Software, and I have just 1 (one) PC on
witch I will use this Software, it is not a upgrade (I have the 1.05)
I am searching for an older Version, so PLEEEEEASE, make it fast.

Greetings:

To RT Systems:
Please implement this in the next Version of ADSM 1C, it will be Great.

To YAESU:
You have made the best Transceiver, keep on doing, I love you.

To Bill Childers (KE6VVW):
Thank you Bill, great Job, If you need anything, ...

Greetings to all of you from Macedonia (F.Y.R.), and I apology for my
bad English. If someone has a Problem doing the MODS, leave me a Mail,
I will try to Help (And please thing about the 1.04)

Indi.

The usual Disclaimer:

Don't TX and RX at Frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

7730. HF Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: "Michael J. Wade" <wade@iquest.net>
Message-ID: <01bc38a8$414603e0$b1abf6ce@wade1>
Source record: 179539

Having recently passed the test for General, I am looking for a HF rig, and would like to solicitate some opinions from the group. I only have a few hundred I can put into this radio right now. I am considering the following radios:

MFJ-9420 - 20 Meter SSB
Hallicrafters SR-150 80 to 10 Meter SSB / CW
Hallicrafters HT-32 80 to 10 meter ssb / cw

Anyone use any of these, or have any comments or suggestions.

I would like to contact some people in SA. I will probably only be able to put up a dipole antenna. I appericiate your help.

I suspect the battery is shorting out on the connector. Look to see if
the screw on the radio part (labeled +) is tight. I have also noticed
that battery packs are not all created equal. One works great the other
sticks and wont easily come off of my HTX202.
Good luck
John

7740. Ten-Tec Omni VI: vs. FT-1000D

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanE7J18K.4y1@netcom.com>
Source record: 179581

My wife has been a ham for almost two years now,
and is eyeing my IC-706 for its VHF SSB capabilities.
Nice time to go shopping for a new rig. :-)

I've pretty much narrowed my choices down to either
the Yaesu FT-1000D or the Ten-Tec Omni VI, which
will be hitting the street soon as the "plus" model.

I've heard lots of positive comments from various sources,
giving high marks to Ten-Tec for the quality of their rigs
and the service after the sale.

So, I'd appreciate opinions from owners of either, or both.

It would be nice to support an American manufacturer of
electronic equipment. No slur intended; I've been a ham
long enough to remember the greats such as Drake, Collins,
and the others - and still have my Drake "4" line.

Thanks in advance and 73 de Jim - KF6CR

Dan,
You cannot receive VHF AM mode with VFO B.
Only with VFO A.
It's all spelled out in the owner's manual.

>KB0UZQ

Actually, the "New Version" of the FT-50R is the >>same one<< that has
been out for quite some time ... all they are doing is including the
FTT-12 board (which sold separately for $62.00) with the radio ... the
FTT-12 board allows CTCSS decode, "digital PL" and DVRS (Digital Voice
Record System" ... the basic guts of the radio are exactly the same as
the one we now know and love (in fact, I just recently got one for my

wife, who passed her Tech two weeks ago! - Got the FT-50RD - the "new" version" for her.)

73 to all!

Source record: 179587

I have the following Spy type transceiver. Please help me identify it.
Model number FS5000. it appears to be of German manufacture an judging
by the components used possibly late 1980's.
It is complete except for a control head or digital terminal.
It is composed of seperate modules which interconnect via db 15
connectors and small locking bars.It is aproximately 2.5inches by 10
by 10. suface mount componts are used
1. Receiver with 1/4 inch high led frequency readout, volume, frequncy
arrows, delta frequncy and whip antenna mount..NMC27C232QE is used.
2. Transmitter,power amplifier.20 watts
3. Digital antenna tuner with long wire antenna stud.
4. AC power supply
5. Batteries
6. Battery charger.
It appears similiar in concept to the HRS7000 made by Deutsche
Aerospace
Thanks in Advance.

Date: Wed, 26 Feb 1997 17:11:07 -0600
From: lem@datatel.com

Greetings,

I normally don't send unsolicited e-mail, but based on all of my reading
I and still have FT-50 questions.

Would anyone with knowledge please take a few minutes and see if you can
answer any or all of my questions. (Some are elementary and some are
very technical, but any help is appreciated.)

My radio has the following serial number sequence: 6L130292 (but I've
been told this doesn't matter)

My Radio has 'freeband' mod: (de-solder blob "1", remove resistor "A"
above blob 1, pwr on with lamp/knob,press FW, pwr off, pwr on with
lamp/ptt/knob, change BAND=A* to BAND=FREE, pwr off, pwr on)

My Questions

1. Why cant I get my radio to go back into "BAND xxxxxx" anymore, it did
it one time during freeband mod? I am interested in going back to see
what the A1, A2, and A3 settings do, and if I should have
createdtemplates for each of these? I assume two of them are EURO(s)
and
one is US configuration of the radio, if so does anyone have the
template
files (.TPL) for the three of these they could send me (if my assumption
is wrong - - what are they and are there more, and can you send me
template files for all of them) ? I am also interested in getting to
the
INTERNAL SYSTEM ALIGNMENT so I can adjust the signal strength meter. I
knew I read this somewhere, but YAESU said there was no such capability,
help me???

2.
What are the various differences in the versions of the ADMS-1C
software?
(for example version 1.05 won't let you enter out of band frequencies
[200-300 and cellular] even though you have done the FREEBAND
modification, but version 1.04 will allow entry of out of band
frequencies). Would having an older version(s) of the ADMS-1C software
do
anything for me, and which versions should I get my hands on (and how
can
I find them) ?

3.
How can you get the all VFO and HOME memories programmed into the radio
from the ADMS-1C? Am I doing something wrong, are these a part of a
template file (.TPL) versus a radio file (.RDF) ?

4. Would someone be kind enough to send me the following .TPL files via
the regular mail (address below): • a standard US template [pre
modification / out of the box configuration] • either or both European
templates(EURO.TPL) with a desc of what each does do • any other
templates that do anything off-the-wall, neat, or special [send with
descriptions]

5.
Can someone tell me what each of these lines in my WIN.INI file do for
the
ADMS-1C?

[FT-50 Programmer]
AllowAnyFrequency=0
Calibrate=2909
Com=1
DataDir=C:\YAESU\FT50
TemplateFile=C:\YAESU\FT50\FREEBAND.TPL
UseTemplate=1

What happens if I start changing values of "AllowAnyFrequency", will
that
open it up so I can do the out of band frequencies via the software, and
if so what value do I use (I have tried 1 and null, neither work) ?

What does the "Calibrate" do, and what are my options for values here?

6.
Is there a users guide or some detailed instruction manual that anyone
has
written for the ADMS-1C?

7.
Is there a power on button sequence that will reset the microprocessor
without clearing memories?
Is there a power-on-button-sequence that will reset the microprocessor
AND

clear the memories?
What are all the different power-on-button-sequences and what do each of them do?

8.
Is there a mod for receive in the 25-75 MHz range ?
Will the radio receive VHF low band if I add 45.1x 2 to the desired frequency ? (ie. 52.250+90.2=142.450)

9.
Is there a mod for TX (or RX) in the 220+ MHz band ?
Is there a mod for TX in the 800/900 MHz bands ?

10.
Has YAESU printed new (revised) manuals for the FT-50 yet, I heard they were going to ?
Is there an advanced users manual yet (similar to what ALINCO did for the
DR-599/600) ?

11.
What happens when you turn off the CPU clock shift function ?
What would this be used for, scanning via some sort of computer like computer aided scanning ?

7749. Re: Info YAESU ft-50 Dual-band

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: Phillip Nichols <maccabeus@gatecom.com>
Message-ID: <33367684.79A7@gatecom.com>
Source record: 179590

go back and read the manual on page 21.
GOOD NEWS for both of you,
ik1naf@gma.it,kc5egg@ix.netcom.com

though You can not perform duplex repeat or full
duplex, you CAN use the FT-50 to uplink on vhf
while downlinking on UHF (Or vise versa).
Or transmit to your mobile rig in the car on UHF
while recieving on VHF (using your FULL DUPLEX
mobile to reach a repeater when your in the office).
I set my FT50 to 446 simplex and recieve 147.24
(our local repeater) using a dual band mobile
to boost my HT to 50w and send it to the repeater
for example.
--
enter the transmit freq into VFO b(right) and recieve
freq in VFO a(left). Hold down the knob and then turn
to VDUP 08. click down knob and then turn to ON.
Hold down knob 1/2 sec. you are now in split VFO
semi-duplex mode. Call it a MANUAL duplex whereas most
dual mobiles are capable of auto-repeater duplex.
the right freq is transmit and the left is recieve.
Bands are irrelavant. ENJOY!

I have the "potato head" mike and a friend has the DTMF mic. My friend is
getting rid of his 8500 because it is so difficult to adjust the volume and
squelch levels: only one pot for each!

I've had the potato head mike for about 6 months know and really like it.
The separate audio
and squelch controls for each band (4 pots in all) are really handy.

I agree with the above. I have had mine for about 5 Month's now and have
the potato head. It was hard at first to get used to all those controlls
but once used to it there's nothing like it. It's also great that you
can change repeater files just by loading a new data base into the rig.
The only thing I don't like about it is they have done away with the
conventional mike connector and went like many are now to the phone jack
type and you have to remove the head to even unplug it (Cheap).

When the display goes to dots one of the PLL's is unlocking. It shows
the display when you tune because the uPC ignores the unlock signal when
tuning the radio. As soon as you stop and it checks the unlock signal it
goes to dots.

As far as which PLL is unlocking I would need a lot more information.
ie: which bands? does it correct itself after warmup?? does it do it
after warmup??

UHF Power Amplifier Modules

The MITSUBISHI M67729H2 has been developed and produced in large quantities
for UHF cellular telephone applications.

Technical Data:
Output Power = 20 W
Gain = 21 dB
Harmonics = -40 db
Spurious Outputs = -70 dB
50 Ohm in/out

This module is also excellent suited for class C Amateur Radio PA's in the 70 cm-Band.
The low output of a UHF handheld may be amplified to about 20 W output! The use of these modules is the easiest way to build a PA. There are various discriptions in the ham literature.

I am now able to offer you this excellent module with a more than 10 dB! price
reduction:

1 ea for DM 35,--
10 ea for DM 300,--

plus postage with C.O.D. charge.

YOU DON'T NEED TO BE A SCOUT OR LEADER TO EARN THE ScoutElmer AWARD!!!
ScoutElmer Award for helping Scouts become ham ops

WHO QUALIFIES FOR THE AWARD?
1. Licensed ham op (any level)
2. Scout or Adult Leader (past or present) or...
3. Any ham that know someone (Scout or leader) currently active in a Scout unit.

WHAT IS REQUIRED FOR THE AWARD?
1. Agree to respond to Scouts via email with their questions about ham radio in your local area, for 1 month.

HOW DO I SIGN-UP FOR THE AWARD?
Email to the address below and fill in the blanks.... that's it!
1. Name & Ham Call Sign:

2. Email address:

3. Locations: (ie London, UK; Los Angeles, CA, USA; etc)

4. What do you want to do: (email only; email & phone; email, phone & ham class)

5. Your Scout affiliation & position (enter past affiliation and date if applies):
(If no current or past affiliation) Your Scout or Scout leader sponsor:

6. Optional comments for your ScoutElmer listing: (ie. ARC Club listing, Explorer post, Troop etc.)

WHAT DO I GET?
ScoutElmer Award recipients will receive special award logo graphic you can add to your website. You also get a certificate (suitable for framing).
Lastly the satisfaction that you helped promote amateur radio in Scouting.

If you've already applied for the award, sorry for the email. You should receive confirmation in the next few days.
YIS

I am selling my Icom IC-Z1A... It's in great shape, and
only a year old.

Features:
Alphanumeric Display
40 Memories per band
5W Output at 13.8vDC
Speaker/Mic/Display detachment cable
Antenna
Original Box and manual!
1 Year old and in MINT condition, not a scratch anywhere!

Also includes:
LC-124 Vinyl Case
CP-12L Filtered Cigarette lighter cord

I'm asking $325 for everything...
If you are interested please e-mail me, or visit
my web page at http://members.aol.com/unitedsnd2

I'm selling some pro audio and video gear as well...

Also for sale is a Radio Shack Frequency counter for $70

Thanks,

7763. FT-920 & FT-990 w/Powersupply

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-24 00:00:00 UTC
From: Rosch <rosch@mail.dec.com>
Message-ID: <3336C46D.17C4@mail.dec.com>
Source record: 179604

The FT-990 isn't listed at the Yaesu homepage anymore. So - maybe a bad assumption - the FT-990 is being replaced by the FT-920. YET - the recent dealer description of the FT-920 did/did not mention the power supply. Does anyone know if the 920 has a built-in power supply? I only ask because of my assumption that the 920 is replacing the 990.

General Disclaimer -
I have been living in a cave for the last 6 months and am only asking a question. You are smarter than me. Please be nice. If you reply with a decent answer I'll up your Visa limit to 50K for the next 6 months with no interest. Flame me and you are dead meat. I'm only asking a question. This disclaimer based on the observations of replies in this NG. Peace.

7764. Re: Icom IC2000-H

I don't think it will do it. The other weird scan "feature" is the
priority channel doesn't switch to the pri channel from a memory station
when the squelch is open.

Lee Henry <gtsi@flash.net> wrote in article <332F8498.2C9E@flash.net>...

7765. WANTED: TUBES, NEW AND USED

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-25 00:00:00 UTC
From: dlusis <dlusis@ix.netcom.com>
Message-ID: <33383E92.C75@ix.netcom.com>
Source record: 179407
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I am seeking either new (old stock) or good, used/tested audio tubes of
the following designators:

DRIVER TUBES:

12AX7/ECC83 -- European only (Telefunken, Amperex "Bugle Boy", Mullard,
Valvo, etc...)
5751 -- All brands
6DJ8/6922/ECC88 -- All brands
12AT7/ECC81 -- All brands
6BM8 -- All brands
6SL7 -- All brands
6SN7 -- All brands
6N7 -- All Brands
5694 -- All brands
7199 -- All brands

POWER TUBES:

6550 -- All brands
KT88 -- All brands except Chinese
6CA7/EL34 -- All brands
2A3 -- All brands except Chinese

These tubes will not be resold--they will be used by members of our
local, home-builders audio club. All REASONABLE offers will be
considered--even if you only have a couple of tubes available.

Please e-mail or FAX (619) 296-0927 with following info please:
Brand/type, quantity avail. and condition (new, used/tested or ?).

Thanks,
DENNIS, W1LJ/6

7766. Yaesu FT-8500 Upgrade??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-25 00:00:00 UTC
From: Bob McNerney <mcnerney@tiac.net>
Message-ID: <859294719.26117@dejanews.com>
Source record: 179408

I am looking for a dual-bander that has the following features:
detachable front-end
wide-band receive
memory labels
computer interface.
The FT-8500 seems to come close but I think its receiver cuts off above
500 MHz. Has anyone heard of rumors regarding either a replacement for the
8500 that might have a broader receive spec or an enhancement to it?
thanks!
-bob

> KB0WOB
The Sierra by NORCAL is more costly but you can add additional band
modules later on. The Ten-Tech is one of the least expensive (about
$90). This months QST has a 20 or 80 meter SSB QRP article - you can
purchase board, parts or a complete kit.

Type "QRP" in the search engines and you'll get lots of data.

Message-ID: <5h9nhu$d5l@sjx-ixn7.ix.netcom.com>
Source record: 179414

I have a number of tube items from the 50's for sale.
Since these are pretty heavy, I prefer not to deal with
shipping matters. An interested party in North Texas
would be the optimum connection at this time:

1. Johnson Viking II multiband transmitter (no Ext. VFO)
(HUGE tranformers and very heavy)
2. Hammarlund HQ-140 XA Gen Cov Receiver
3. Hallicrafters S-20 (Sky Champion) Gen Cov Receiver
(prewar - from the 30's)
4. Lampkin Frequency calibrator/comparator
(All of the above are in good working order
and in quite nice shape, except that the
Sky Champion looks its age.)
5. Several meters and misc items (no mikes nor bugs)
6. Several ARRL handbooks and manuals from the 1950's
7. One box of misc tubes, mostly recvr and of uncertain
usage (although most are in cartons), with a few
transmitter types

I also have (8.) a Kenwood R-1000 gen cov recvr of more recent vintage.
It is a little worn on the underside (it was in a vehicle) but otherwise
looks fine. It works very well and is in calibration.

I can send a .GIF of these items if you are interested.

I will sell the entire lot on a come get it basis for $750. Please
send email to >> RobtLebo@ix.netcom.com <<. If you would like, leave
a voice line number anbd I will get back to you.

Thanks for your interest.

--------------EDC518D5BFE
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

Anyone considering pizza dish satellite TV, better read this:

--------------EDC518D5BFE
Content-Type: text/plain; charset=iso-8859-1; name="DTV"
Content-Transfer-Encoding: quoted-printable
Content-Disposition: inline; filename="DTV"

BEWARE THE TREACHERY OF DIRECTV (DTV)

If you are one of those growing thousands who have bought into the notion=

of pizza dish satellite TV ... or, even considering the purchase ...
better read these cold, hard facts of life.

1. DTV is a monopoly. There ain't no competition. If you don't buy =

one of THEIR plans, you have no other place to go at present.
=

2. Do NOT be confused by DTV's misleading claim that there is some
competition: DTV is the service that supplies access to everything
available, except for the premium movie channels. And, USSB is the
service that provides those. There is NO duplication between them.
=

3. When you first sign up for DTV, and you have to sign up, why else wou=
ld
you buy an expensive DSS receiver, dish .. and perhaps even two
receivers with a double-feed amplifier dish? You are offered several=

choice packages, the least of which was a basic service which include=
d
seven channels of ENCORE movies ... all for one price. You can pay a
bit more to get national networks, a bit more for some extra movie
channels, a bit more for access to your 2nd receiver (if you bought
one for the bedroom), and a bit more, and a bit more, and a bit more
for several additional options.
=

It is the simplest, basic, lowest-level option where they have stabbe=
d
```

patrons in the back. Recent notifications warn us hooked users that
the basic option will no longer include the ENCORE movie channels.
But, did they lower the price? No way! Rather, they RAISED the pric=
e
by a lousy 5-cents. =

=

Now, by way of consolation, I suppose, they claim to be UPGRADING the=

basic service by adding several NEW channel services; including such
things as QVC (!!) Oh, boy! Telephone calls to them netted the
explanation that the PATRONS had been ASKING for these changes. There=

is no way under God's blue sky and starry heaven you will ever
convince me that patrons complained to them of having too many movie
channels, would they please take them away, and give them QVC. DTV
must think that we are blubbering air heads. They removed all the
ENCORE movies, replace them with fluff ... sheer nonsense and fluff,
and have the audacity to charge us another nickel to boot. Further,
to add insult to injury, they want to extort an ADDITIONAL $4.00
per month to keep the ENCORE movie channels we always had gotten for
no additional charge.
=

This is not to say that I begrudge DTV an honest heist in prices like=

every other service does occasionally. But, an outright THEFT just
boils my blood. Remember, there ain't no other ballgame in town. The=
y
are it! You take them ... or nothing!
=

Why didn't they just say they were raising prices by $4.00, and were
throwing in some extra fluff channels for good will? It amounts to
the same thing. It is just their underhanded, lying, cheating and
deceptive method they employed ... knowing full well that they were
holding us by the balls and screaming "gimme the extra four bucks!"
=

Well ... THIS patron is looking earnestly for anyway possible to brin=
g
this company to its knees. And, I implore all readers to take cautio=
n
and avoid DTV. Go to DISH TV or PRIME STAR if you want small dish TV=
=2E
At least you are renting, and can break it off without too much cost
in case you are dissatisfied with them. You can always go to the
OTHER leasing company for competition. But ... DTV ought to be
avoided at all costs. Do NOT buy your own receivers which are locked=

into just ONE company. You will ultimately be sorry.
=

7788. Re: Info YAESU ft-50 Dual-band

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-25 00:00:00 UTC
From: Eric Bouchard <bouch@videotron.ca>
Message-ID: <01bc395e$a6f03380$cddb60cf@poste-1>
Source record: 179430

It's very confusing while a read all responses to this question;

What dual band signification ? (or perhapse repeater feature);

For me, Ft-50 is a dual band but not a repeater capable dual band

yes it can receive on a band and transmit on the same or the other band in
Duplex mode.
-1- In VLO mode put transmited frequency on VLO,
-2- Change VLO and set the received frequency
-3- Go to the menu and set VDUP "on"
Go you are in dual band com.

but no, you can't received and REtransmit on the same or the other band,
it's not a repeater. You can't activate both VLO in the same time. If you
need repeater mobile rig is more appropriate the handheld rig (the deliver
more power). There's no advantage taking 5w handheld radio as repeater.

5w = double the distance; 5w to repeater and 5w to destination
45w => 5w to repeater and 45w to destination

For information on the Vibroplex key, you can contact the manufacturer
via http://www.vibroplex.com ...

EF Johnson has not produced keys (or other ham equipment) since the
mid to late 1960's ... they are still in business, and have a web site
at htto://www.efjohnson.com.

See how much information a simple search thru Yahoo and/or Alta Vista
will give you!

CQ CQ CQ DE KB2OYM

Hello fellow hams. Here's the deal. I have a Kenwood TS 450S/AT, that's with the automatic antenna tuner, for sale, in mint condition.(once it left the box it never left my house) This is an excellent rig, and has served me well in many QSO's. I have really shifted myself to VHF, and my interest is there, and I don't really use the Kenwood much. That's why I'm selling. It comes complete with the microphone, and I'll give you the Astron RS-20A power supply (If you want, you can have my homebrew 40M dipole too) I'm selling this package for $900, negotiable. Keep in mind, that this radio is still a hot item in stores, and sells for 12-1300 dollars, without the power supply---which costs you about another 75. By the time you're done with tax and shipping, that's a good 1400-1500 dollars. Please email me if you have any interest in buying this radio.

ADI is now delivering AT-600's ... got my first look at one today!

It is the same radio as the RS dual-bander, but has the ADI name on it instead of RS - and a hundred bucks less to boot!

Looks like a real nice radio ... very nicely done manual, easily understood.

From what I understand, the main reason that ADI was delayed so long in getting the AT600 to the market is that their order was behind the RS order in the priority list.

Now available at a Real Ham Store near you - the ADI AT600!

Hi,

I have a pair of long range wireless radio modems that I'd like to trade (or sell) for either Ham or shortwave equipment. They were partial payment for a contracting job I had and I don't have much use for them. Though, it was fun to play on the net from the beach 1.5 miles away (connected through a unix server).

They are the GRE Gina 6000N spread-spectrum radio's and full specs for them can be found at "http://www.greamerica.com/6000n.html". I also have a yagi antenna with 6db of gain.

The radio modems have a communications speed of 38.4Kbps full duplex with an airspeed of 128kbps. They are spread-spectrum in the 900mhz band so no license is required.

I'd like $1000 cash or equivalent in trade. I'm looking for a HF rig, a dual-band 2m/70cm handheld, a high quality shortwave reciever (ooh, a AOR 7030), and accessories.

-Josh

Radio Shack says NO WAY.

With that said, I charge mine from the car's DC power jack (aka cigarette
lighter socket) wit regularity, but no ill effects. Polarity is tip positive.
The 9 Volt unit may work.

Just be very very very careful about ventilation - a charging
lead-acid battery generates hydrogen gas in significant quantities ...
and it was hydrogen gas that put the Hindenburg (Zepplin) down in
flames in Lakehurst many years ago!

>tubes... :)

>Also, any suggestions as to what should be avoided would be welcomed too.

My first HF rig I wanted the same specs as you, wound up buying an older
KENWOOd TS-120S rig, no 160 meters, 30 meters. Not able to modify for
out of band (If that is something you wanted).

It is a 100 watt output, non adjustable rig. No FM. It *CAN* be mouted
mobile,
but is considerably larger than the mobile HF rigs of today. It was
introduced
around 1979.

It has generally been a very good rig, and have made MANY contacts with
it,
bought it for $300.00 (last year) - have seen used prices elsewhere in the
300-450 asking range.

Good luck
N1WSA

>do with boats always is way overpriced, even if the exact same thing
>is also sold for cars at an auto-parts dealer for a much lower price...

Actually, there is an immense difference between a typical car battery
and a deep-cycle marine battery.

A car battery is designed to have a very high current (starter) drawn
from it for a short period of time, and then have that discharge
immediately replenished by a fairly high current over a short period
of time.
On the other hand, a deep-cycle battery is designed to have a fairly
low discharge rate over a very long period of time, to the point where
the battery is almost totally discharged, and then have that discharge
replenished by a fairly low current over a fairly long period of time.
The composition of the plates, and their supporting structures, is
totally different, and differ greatly in manufacturing costs (to say
nothing about the fact that the market is far greater for cars (two or
more per family) than it is for boats.

A visit to your local library might give further information, or you
might be able to find information on the Net ... I have not looked
for that type of information myself.

You can buy several kits for less than $100.

Have a look at Dan's ~ "Small Parts" at http://www.fix.net/dans.html

He supplies two different kits for CW transceivers, as well as
otherwise hard to get parts for the homebrewer.

Personally I have built the NN1G Mark 3 transceiver for 80 m, and I'm
very satisfied with the kit.

Hi Guys. The trick with "feeding" NiCads is to limit their intake while charging, even from a car. You can use a Voltage regulator like a 7805 or 7812 for this by putting the regulator in series following the Input from the supply side and output to the battery with the ground post attached via a resistor to the output pin. The feed rate is calculated by I=Vr/R where I=current, Vr=VoltageRatingOfTheRegulator R=resistor so a 7805 with a 33 Ohm resistor in place feeds at a .151 Amp or 151ma. I do not know what the feed rate should be for those NiCads, but I am sure it is mentioned somewhere.

7819. Boycott Peter Trapp Computer Shows

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-25 00:00:00 UTC
From: cjs9@cornell.edu
Message-ID: <5h8n30$i64@newsstand.cit.cornell.edu>
Source record: 179481

The Syracuse hamfest is *OFF* for 1997. The April LongWire will be outshortly
and there's a one-page article in it on what eventually derailed the event.
But in a nutshell, our terms of use for the Fairgrounds facilities would prohibit the sale of any "computer-related" item at the hamfest. broadly interpreted, this would have barred packet stations, logging software, callbook CD ROMS and so forth. Last year this provision was not enforced but
we were told that it would be enforced this year and several months of negotiations with Fair management could not get around this issue.

Will it be back in 1998? I don't know. Stay tuned.

73's, Steve

The above resulted from a direct threat by Peter Trapp to pull their shows if
any other user sells any sort of computer product, new or used. If it can
happen here it can happen where you are.

I am asking all hams to:

1- boycott Peter trapp shows
2- if you are a New York State resident, write the Governor
3- support your local hamfest

Don't let this happen to you.

Did what? Full duplex I think not. You can hear a downlink on the FT-50
but you cannot hear YOUR downlink and that is the point. If you can't
hear yourself it does not duplex.

Could be true for a lot of people, but in my situation, with MUCH searching, the data just isn't available. I am in a town of 100k, and only some freq's are available on the net. For small towns, they are non-existent, and a post might get you what you want. I have to scan freq ranges with mine, and it has no auto-store capability, so I am sure I am missing something, hence the request for freq's.

There are 6 or 12 kits you can buy for $50-$100 that cover
part of one band. Multiple bands costs 2-3 times that figure.

The Norcal40a kit costs $129 and is the best.

Greetings all,
I have a bit of a dilemma on my hands. I just acquired a Motorola Saber III VHF and I'm having a bit of a problem programming it. In fact, it never gets that far. Each time I try to read the radio, I get an error telling me that the radio has an unrecognizable core and that may be the be the result of a serial bus error or bad core uP. Any ideas what I'm doing wrong and what steps I may take to correct the situation? All help appreciated. Oh, in case it's relevant, the radio has an 8D core.

Thanks in advance,
-Jay

There is a french design, published in VHF communications, which was
supposed to cost about 100DM, and that was not just QRP. VHF
communications have a web page.

>Just be very very very careful about ventilation - a charging
>lead-acid battery generates hydrogen gas in significant quantities ...

Hello Dale,
Yes, I am very aware of this situation. The batteries are in an enclosed, unheated porch that is *extremely* well ventillated. The batteries don't especially "like" winter, but I decided I didn't want to worry about battery ventillation in the house. By the way, I've heard of battery caps that help take care of the hydrogen problem by combining it with oxygen in some safe way and put the water formed back into the battery making them lower maintenance than otherwise would be the case. I don't use them, but I have friends that do and love 'em. Also, proper charge control helps keep the hydrogen production at a minimum.

Remove the battery and antenna
Remove the 4 screws on the bottom of the radio.
Remove the battery slide plate.
Locate and cut the blue wire. It's near the back on the left side(as
you are looking at the front of the radio.
Put it all back together
Reset the microprocessor by pressing and holding the function key
while turning the radio on. Remember that when you reset the
microprocessor, you will lose all of your memory settings.

I have used all of the rigs cited. The TH-79 is a dual bander the FT-51
is a dual bander the FT-50 and TC-7 are not dual banders. They cover
two bands but one band at a time thus they are not dual banders.

>while downlinking on UHF (Or vise versa).

You cannot do this because it is not a dual bander. It has a wideband
transciever that can operate on two bands this does not a dual bander
make. Cover two bands yes dual bander no.

Jerry

This same thing happens with most Chrysler products the last
10 years or so. It's a very weak unmodulated carrier on 146.52 Mhz
that comes from the electronic clock in the (Chrysler product) AM/FM
radio. It is ironic that THIS particular freq. is affected!

I just turn the squelch up a little bit more to "kill" it.

An airwound inductor will have slightly better "Q" than the ceramic one. However, I don't beleive you won't hear much difference if any at all. Especially if those local signals also affect a Ten-Tec Omni.

7859. Re: Problem with TS-940S Display

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-25 00:00:00 UTC
From: DWINN@TNG.NET
Message-ID: <33374c53.0@news.tng.net>
Source record: 179554

The problem was found and fixed. This could happen to anyone that has the TS-940. I found several solder joints that were fractured. All the bad joints were in the areas where the PLL had WAX poured in to keep down microphonics. The reason for the failures appears to be from several things. The lead diameter to hole diameter is large for a solder flow process. After looking at the joints, very little solder wicked up the exposed lead which means not much solder was left on the lead. When the hot wax was poured on the components, it expanded and applied pressure on the bodies of the components which was extended to their leads, I believe this caused a stress which fractured the lead solder joints. As a result, the circuit failed.

The cure was easy, After troubleshooting to the area of the problem, I used a 10 power microscope to inspect the board. The fractures were easy to spot with the scope but a eyeglass could have been used. Since the board is single sided, resoldering the fractured joints was the fix.

I want to thank David and the others that responded to my first posting of this problem and I hope others can use this information to repair their radio.

Just be smarter and buy Echostar package . They are cheaper and offer
better service to their customers. I say this from experience with both
companies involved as well as a former customer of Primestar. I've had
nothing but good service and professional treatment from them for the past
year.

Iben Shafted <dmrlee@acs.eku.edu> wrote in article
<3338B036.158B@acs.eku.edu>...
Anyone considering pizza dish satellite TV, better read this:
BEWARE THE TREACHERY OF DIRECTV (DTV)

If you are one of those growing thousands who have bought into the notion
of pizza dish satellite TV ... or, even considering the purchase ...
better read these cold, hard facts of life.

1. DTV is a monopoly. There ain't no competition. If you don't buy
one of THEIR plans, you have no other place to go at present.

2. Do NOT be confused by DTV's misleading claim that there is some
competition: DTV is the service that supplies access to everything
available, except for the premium movie channels. And, USSB is the
service that provides those. There is NO duplication between them.

3. When you first sign up for DTV, and you have to sign up, why else would
you buy an expensive DSS receiver, dish .. and perhaps even two
receivers with a double-feed amplifier dish? You are offered several
choice packages, the least of which was a basic service which included
seven channels of ENCORE movies ... all for one price. You can pay a
bit more to get national networks, a bit more for some extra movie
channels, a bit more for access to your 2nd receiver (if you bought
one for the bedroom), and a bit more, and a bit more, and a bit more
for several additional options.

It is the simplest, basic, lowest-level option where they have stabbed
patrons in the back. Recent notifications warn us hooked users that
the basic option will no longer include the ENCORE movie channels.
But, did they lower the price? No way! Rather, they RAISED the price
by a lousy 5-cents.

Now, by way of consolation, I suppose, they claim to be UPGRADING the
basic service by adding several NEW channel services; including such
things as QVC (!!) Oh, boy! Telephone calls to them netted the
explanation that the PATRONS had been ASKING for these changes. There
is no way under God's blue sky and starry heaven you will ever
convince me that patrons complained to them of having too many movie

channels, would they please take them away, and give them QVC. DTV must think that we are blubbering air heads. They removed all the ENCORE movies, replace them with fluff ... sheer nonsense and fluff, and have the audacity to charge us another nickel to boot. Further, to add insult to injury, they want to extort an ADDITIONAL $4.00 per month to keep the ENCORE movie channels we always had gotten for no additional charge.

This is not to say that I begrudge DTV an honest heist in prices like every other service does occasionally. But, an outright THEFT just boils my blood. Remember, there ain't no other ballgame in town. They are it! You take them ... or nothing!

Why didn't they just say they were raising prices by $4.00, and were throwing in some extra fluff channels for good will? It amounts to the same thing. It is just their underhanded, lying, cheating and deceptive method they employed ... knowing full well that they were holding us by the balls and screaming "gimme the extra four bucks!"

Well ... THIS patron is looking earnestly for anyway possible to bring this company to its knees. And, I implore all readers to take caution and avoid DTV. Go to DISH TV or PRIME STAR if you want small dish TV. At least you are renting, and can break it off without too much cost in case you are dissatisfied with them. You can always go to the OTHER leasing company for competition. But ... DTV ought to be avoided at all costs. Do NOT buy your own receivers which are locked into just ONE company. You will ultimately be sorry.

7867. Schottky Diodes...a primer

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970326.175718.8727.0.km1h@juno.com>
Source record: 179263

I am not sure where Mr. Nagy obtained his information but it certainly was not from Ulrich Rhode.
First of all there is a tremendous difference between Shottky diodes as used in a product detector and PIN diodes as used at RF. To the uninformed they may appear the same, however in reality each has its purpose.

I have spent countless hours on the telephone with Rhode and virtually every PIN diode manufacturer on the planet in order to come up with the correct item for my own use in Kenwood TS-940's. This is over a period of about 5 years.

Articles by Rhode and others in RF Design and Communications Quarterly have completely stressed that standard Shottky's are a poor device to use in RF switching and actually aggravate the IMD problem as compared to the factory silicon PN diodes used in front end filter switching, etc. Only PIN diodes offer a performance advantage.

I have been offering Schottky and PIN's to serious DXers and Contesters for several years now. Here is what is available AND TESTED by the pros:

- Schottky Mesh diodes for the Product Detector: they improve distortion products on strong SSB signals. They can be used in place of the 1N60 or similar diodes that are used by many manufacturers. My price for the past 5 years is $1 each. Please understand your radio before ordering. No alignment required.

- PIN diodes. I use a special order diode that works right down to 455KHz; it is made to my specs and I have to buy 1000 at a time. They may be used in the front end RX filters, crystal filter switching in the IF and any TX-RX bi-directional path at the IF low signal level. There are 45 diodes to be replaced in a full blown TS-940 upgrade.
The end result is a major improvement in 2nd and 3rd order IMD, a lower MDS and a radio that can compete with 1997 offerings that cost thousands of dollars more. The price....not some ridiculous $6 to 10 nonsense as mentioned....BUT $3 each. And I still make a small profit at that!

My specialty is the TS-940; most all Japanese rigs of the era use virtually identical circuits so that the same PIN will work in them also. Please consult your Service Manual. The latest radios use Surface Mount components and my PIN's will not be physically compatible. In all other radios that use a standard axial leaded diode (1N914, 1N4148, 1SC1587, 1SC2588 and other generic PN SI diodes) there is no compatibility problem; nor is any re-alignment required.

My references may be found on the air, NCJ, etc.

* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *

The above is only ONE FORTH of my sig file!

On Sun, 23 Mar 1997, Anthony R. Gold wrote:

> This posting is not a rebuke but a genuine request:

Then I'll take it that way and reply with equal respect.

> Is there a possibility that this sort of stuff could go at
> the end of postings?

1: Pine automaticly puts the signature file at the top and there is no
setting that can change that.

2: I already as a policy MANUALLY move most of it to the bottom after
pine puts it at the top... every time I post... too much work as it is to
do that much.

3: Most people DON'T read all the way to the bottom and so they might
reply to the fake address not knowing the real address if I put THAT part
at the bottom too.

4: You can always hit your space bar or PgDn or whatever your mail reader
program's command is to flip to the next page of my post... and that is a
LOT less work for you to do than what you are requesting that I do. Every
mail reader has a next page command.

> This request is to the several people who now are putting these very
> announcements at the start of all their posts. Maybe I'm alone and
> maybe not, but I scan the first page of an article to see if it's
> interesting.

That is what the subject line is supposed to be for. I dont browse the
message bodies, I browse the index to see subject lines. I think my
method is the more common, and more practical. USUALLY in the rec.radio.*
newsgroups, the subject line matches what the thread is about, unlike in
other newsgroups... Because here, even our idiots are more intelligent
than most other newsgroups. I have to give them that. After all...
idiocy is relevent to one's environment of peers. I'd say our idiots are
```

geniuses compared to the average guy in alt.sex.drool-on-your-keyboard or some newsgroup like that. :-)

> And if the first page says nothing about the contents
> then it's a waste of time even pulling it up. Please move these
> repeated large notices to the end of postings near to, or better yet,
> after the sig or bye-bye to these posters and hello kill file. And
> that's probably more my loss than theirs.

They ARE the sig, as I explaned above. Have you ever seen how much I HAVE moved to the end? Anyway, if people are too lazy to hit the next page command or too dense to get the gist of a message from the subject line, then I'd rather BE in their killfile and to those who are now doing so, have a nice life!

> If posters really want something right up-front, a compromise might
> be just a one-liner at the begining which says that information on
> the correct reply email address is at the end of the article.

Moving 3/4 of my sig file to the end is plenty of comprimise. The first 1/4 of it will continue to be up front to tell people where and how to email me so the don't get that damned "unknown domain" error from their mail server.

By the way, in case you do killfile me, let me thank you now for stating what you had to say like a gentleman. I can always respect that. I can be either, a gentleman or a prick... and as a policy, which I act like soley depends on how the person addresses me.

I indicated i had problem removing a single memory channel from the V7A kenwood after making the o.o.b. mods.

I'm not sure what if any relationship exists between my problme and the mod.

I found the solution with Kenwood help. Reset the CPU brain in the unit!

At first I was reluctant to do so, having spent hours programing the memory channels, but found in the manual a partial reset option.

After this reset the erasing of one mem channel works.

7877. 6 meter or 10 meter mobile?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: Fred Lux <flux@gatecom.com>
Message-ID: <3339D03F.213@gatecom.com>
Source record: 179273

OK, here is a question for you. I have a Kenwood 742 triband mobile
with 2 meter and 440 mhz modules in it. I want to add a third module.
I am not interested in the Ghz bands, and have a dual band mobile that
has 220 Mhz in it. That pretty well narrows down the choices to either
6 meters or 10 meters FM mobile. I have had no experience with either.
Anyone have any comments on the pros and cons of either band in a mobile
setup?
thanks.

<snip>

I recently bought some equipment and had the same experience. Everytime
I bring the mike near my mouth I can smell the odor. I would encourage
non-smokers to list their equipment as such and then we could assume
that if the claim wasn't posted that the buyer beware.

Try Halted Specialties in Santa Clara (California) - they have inexpensive
adapters ($5 or so).

If you need an adapter that will have good performance at GHz frequencies,
then try Pennstock, but

expect to pay around $40.

(Some might consider a bnc-sma adapter an obscenity, but bnc-sma is just
vulgar.

RCA-SMA, that's obscene!)

Hi! I've still got this Alinco DJ-580 for sale!!! I had lots of offers but had to turn them down because a guy said he'd buy it, then he boned me. I'm sure there's a bunch of decent folks out there that are looking for a great deal, so here it is:

Alinco DJ-580 2m/440 dual bander. Has been modified for CAP/MARS/AIRCRAFT/CELLUAR

2m: RX: 117-136 MHz AM
RX/TX: 136-175 MHz FM

440: RX: 800-950 MHz FM
400-420 MHz FM
470-520 MHz FM
RX/TX: 420-470 MHz FM

This rig comes with two, yes 2, batteries (one hi pwr - 12v/5w; one low pwr - 7.2v/3w), a charger that you can charge the battery without it having to be in the radio, softcase, manual and schematic.

The important part, the price: $250 obo + shipping (about $8)

Contact me, Dave Gillahan at
906-482-8514
dmgillah@mtu.edu

Either option you choose is fine with me.
Why am I selling? Uncle Sam gave me some money, so I'm upgrading--that simple.

Hope to hear from ya!

As a matter of fact, I just bought a C156-A yesterday.

And I am just returning it today.

It would be an almost prefect HT,(especially with 100 memory channels),
if it were not for 2 intollerable design flaws that make it IMPOSSIBLE to
call the C156-A "reliable". They are:

Intolerable design flaw #1:

The DC power jack is the extremely rare and tiny 3.0mm OD/1.0mm ID
instead of the size nearly all HT and scanner manufacturers use which is
5.0mm OD/2.1mm ID.

Intolerable design flaw #1:

The DC Power jack is not on the top panel like most HT's have it, but on
the SIDE panal right where your palm goes when you use the rig, making it
impossible to use the rig comfortabley without a speaker/mic.

I just emailed a scathing letter to Standard saying just what I'm telling
you and I said if they dont correct it in the next quarter on a revised
model, that hams should avoid buying from Standard because Standard is
obviously trying to make their perephrial accessories proprietary and
doing that would surely be an assinine idea for them to do... after all,
isn't their name STANDARD? So why are they going NON-standard?

As far as I am concerned, no rig owned by a smoker is
in saleable condition.

Wait till Radio Shack has it on sale!! Radio Shack gives you 30 days
"NO QUESTIONS ASKED RETURN POLICY". At Amatuer Electronic Supply there
is no return policy. The customer can not buy a radio for evaluation at
AES. They stick you with a large "restocking" charge. At Radio shack
they will chearfully give you purchase price back up to 30 days later
for any reason!!!!

According to my catalog (1995), Pasternack has a $25 minimum.
The adapter you want is model PE9074 and costs $$17.95. Their phone
number is 714-261-1920 and FAX number is 714-261-7451.

In article <5gnls3$7ul@news.Hawaii.Edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) wrote:
> Also, what do all the numbers and letters in the model number mean?

Not much these days...

H04 should be a 450 MHz pager.

H means Iowa/Fla product
0 means no transmitter (bigger number means more power)
3 means VHF (1 LB, 2 Midband, 3 VHF, 4 UHF, 5 800/900)
B
N is the model series
C
The next numbers vary from product line to product line, but they typically tell such things as the squelch type, number for frequencies, and standard signaling options.

This coding has been changed with the MTS/MCS and Astro Saber/Spectra line so that H04 no longer means UHF pager :-(. For example, H04UCH9PW7AN is an 800 MHz Astro Saber.

7896. YAESU FT50R Custom Tx Offset

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: Mike Cage <YAK@Crestviewfl.com>
Message-ID: <01bc39a2$61c1b060$439131cc@area.crestviewfl.com>
Source record: 179292

Unclear in Manual how to store a Cutosm Tx Offset p.26

The Manual Reads:

Custom Tx Offset
All memories can store an non-standard tx offset, for operation on repeaters with non-standard shift. To do this:

1. Store the receive frequency using the method already described under simple memory storage (any repeater offset will be ignored).

2. Tune to the desired transmit frequency, then press and hold FW for 1/2 second to display a slot at the right.

3. Press and hold the PTT switch while pressing FW momentarily (this does not key the transmitter). Of course, if you're storing this in the HOME channel, you press 9 BEEP when holding the PTT).

When a separate transmit frequency memory is displayed, -+ appear at the top left corner. You can press RV HM to display the transmit frequency, -+ blinks while the pair are reversed.

I have found that this does NOT work. Step 3 is incorrect or really not clearly defined. Step 3 should read more like.

3. Press FW for 1/2 second until F starts flashing then release, press the PTT switch and hold it down and then press FW again.

You can then press MR and go to the memory and you should see the -+ symbols shown at the same time in the upper left hand corner. Any Rx Tx combination can be used.

Mike

7897. YAESU FT50R ARS and FREE BAND

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: Mike Cage <YAK@Crestviewfl.com>
Message-ID: <01bc39a3$e2d20b40$439131cc@area.crestviewfl.com>
Source record: 179293

After modifying the FT50R for Free band is it possible to keep ARS (Auto Repeater Shift). I am able to set the Menu Function 05 ARS to ON, but when I select a repeater frequency using the VFO the radio will not select any repeater offset. I really enjoy the automatic repeater offset function vs the manual selection. If anyone has worked out a solution to this please let me know.

Mike

Hi, I have a MINT condition Kenwood TH-79AD 5watt deluxe dual-band HT for sale or trade. It has been in a soft case since day one and is in perfect working order. It comes with a new soft case, spkr/mic, wall charger, and owner's manual. I want $330.00 + shipping or will trade this HT for a UT-220 (220MHz module for the TM-742A) plus $60.00 cash. Please e-mail me if interested. TNX and 73! KC6TTR Scott sbooth@artsci.net

PS/ Extended RX/TX modification done.

C. W. Wolfe (I think that is the correct spelling) is in Montana, not Colorado.

You might check local two way radio stores, and have them check (or let you check - more likely) their two-way radio trade publications for an address!

Good luck!

Actually, the radio is made by ADI, in Taiwan.

The same basic radio exists as the "ADI AT-600", which sells for about
$100 less at most Real Radio Stores ... and the major differences are:
The AT-600 has all of the features of the HTX-204, and ALSO includes:
Wired Cloning Feature (transfer entire programming scheme from
one radio to another)
PC Programmable (software to be out soon)
Auto Power On
Programmable VFO Range
Battery Voltage Indicator
DTMF (Touchtone [r]) Decode
200 memories in non-alpha mode (versus 120 on RS HTX-204_

In other words, More for Less at your Real Radio Dealer!

That's because the IC-730 was a ham band only (read ONLY) radio ...
not expandable to CB or CAP or Marine or anything else without -major-
modifications.

Just FYI, it's a 600 ma battery pack, so C/10 charge rate is 60 ma.

To further qualify my response from yesterday:

I charge my battery packs with regularity from the car. BEFORE I did this for the very first time, I did some investigation. LOOK AT THE SCHEMATIC. There is a voltage and current limiting circuit BUILT INTO THE BATTERY PACK. I took mr. ammeter out to the car to verify. Yep, drawing a mighty 57 MILLIAMPS when powered from the lighter socket. The circuit works as expected. All is well in the world.

Of course, RS will tell you not to do this.

So, back to which adapter - go with the 12 Volt unit. And don't listen to anyone that tells you that much current will blow your pack. Just because a DC adapter is CAPABLE of providing 1 Amp does not mean that it will FORCE 1 Amp through the circuit. It just means that you: a) Have an adapter that will run cool while charging the battery. b) Have an adapter that can, theoretically, recharge 15 packs at once.

Good luck, 7 3, YMMV, etc.

Date: 1997-03-26 00:00:00 UTC
From: browningd@indy.tce.com
Message-ID: <859381415.9656@dejanews.com>
Source record: 179374

I'm looking around for a new HF rig in the less than $2500 range. I'm looking for opinions on the best buy. I'm thinking about some of the following: ICOM 756, Kenwoods TS570 and TS870, and Yaesu FT990 (is this being discontinued?) or new FT920? (anybody heard anything about it yet or know where I can find some information?) I've noticed that not too many people here are keen on Kenwood's service. What company could I be least likely to get burnt if something went wrong.

Any opinions would be greatly appreciated. Spending a couple thousand dollars (besides being slightly nutty) is not trivial, at least to me.

Thanks,

==========
You would need to set up a metering circuit for tests. One fail-safe
way to charge NiCads is to charge them for 15 hours at a rate of
one-tenth the design capacity.

If the charge rate you observe is in this 10% ballpark, just calculate
how long it will take to put in 150% of its rated capacity, and go
with that when the cells are fully discharged.

NOTE: The ratings on your charger do not indicate that it somehow
"forces" that much current into the load - it merely indicates the
rating beyond which you can expect it to fail internally. The amount
of current which flows in the circuit depends on the circuit, not the
"rating" of the charger. This is why you must actually set up and
measure it. Got a meter? Get one. Got a callsign? Use it with your
posts.

7922. Re: FT50R Software MOD's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <5ham9u$ql2@news00.btx.dtag.de>
Source record: 179381

Just e short explanation of the Message I've send:

It is a Method to do any MOD to your FT50R.
The procedure is very simple and fast done:

1. You make a Template from your FT50R
2. Change 3 Bytes in the Template
3. Upload the Template to your FT50R

So you can switch to any BAND, you don't have do
Hardware interventions or similar staff.

If you want do return the FT50R to its Original
state, just upload the old (unmodified) .TPL
to the Unit.

It is also a solution to Upload your old .TPL
files to the Unit, (those files your are not
able to Upload after making Hardware MOD's)

Indi.

PS. I need various .TPL Files from
different FT50R's for my further
investigations, please send
me a couple of .TPL files
- The Original
- After making same MOD's
- any other
(I still need the 1.04)

7930. Help: Weird TS940 problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970326.113705.9839.0.km1h@juno.com>
Source record: 179389

This has been driving me nuts! It goes into oscillation on TX but only on 160M. It works fine above about 2115KHz.

When it is oscillating the TX relay is constantly chattering and the PA stage current jumps way up. With the relay bypassed and the output going right from the PA/LPF to the SO-239 it works fine.

- Swapped relays
- Swapped PA's
- Checked diodes, caps, RFC's on the RF board associated with that relay circuit.

It seems that every other problem with a 940 is PLL related I wonder if this is also?
Any suggestions?

Tnx...Carl KM1H

7931. Re: Ten-Tec Omni VI: vs. FT-1000D

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC

Message-ID: <5hbdlr$re6@fcnews.fc.hp.com>
Source record: 179390

: It would be nice to support an American manufacturer of
: electronic equipment. No slur intended; I've been a ham
: long enough to remember the greats such as Drake, Collins,
: and the others - and still have my Drake "4" line.
: Thanks in advance and 73 de Jim - KF6CR

Opinion alert:

I still have my C Line also but it never gets powered up with my FT-1000D around. I try to rate radios first on their receivers. IMO the FT-1000D is a fine radio. I know a couple of people who have compared the 1000D and the Omni VI side by side. One preferred the Omni just a bit more on certain modes. The other thought it was a toss up and went Yaesu because of what he termed lack of flexibility with the Omni. He though the Yaesu was easier to use and had more features that were worthwhile. However its seems apparent the Omni has as good a receiver as any rig around. Depending who you talk to it maybe the best. I'm told that TenTec products have a tendency to need that fine service department. But I have no first hand knowledge. That opinion comes mostly from what I've heard on these radio newsgroups. I know there are lots of satisfied Omni owners out there.

You might also consider the FT-1000MP. Its a fine radio also but lacks a few of the features of the 1000D (200w, RX on two different bands at once). However the 1000D is seven year old technology and the 1000MP is a bit newer. I had a 1000MP hooked up along side my 1000D last weekend when I was running EME skeds on 144MHZ (+ DownEast 2m transverter). In those super weak signal conditions the 1000MP seemed about equal to the 1000D on RX. But the 1000MP has a lot of nice DSP features built in when working in condition with a bit more QRM.

I just sold my second radio (JRC JST-245) and planed to replace it with another FT-1000D. But I'm now seriously considering the 1000MP.

Both the rigs you are considering have great receivers. With that as a starting point your can't go too far wrong.

That's because it is made by ADI for RS. One major difference in the
two is the RS cannot be modified (or at least not very easily) to tx
out of band. The other major difference is the AT-600 costs $100 less
than the RS

I recently bought some ham gear here on the net. It arrived in good shape, and was more or less in the condition the seller had described, *except* that it reeked of cigarette smoke! It was visibly covered with a disgusting veneer of tobacco goo that took me the better part of a very unpleasent evening to remove. Even the cables and connectors had to be carefully cleaned.

In fairness, I hadn't asked if the seller was a smoker, but I think it was less than forthcomming of him not to tell me. In my opinion, you can't represent your gear as "clean" if you've been smoking around it.

From now on, I'll ask "Are you a smoker?", right after I ask "Does it work?".

Just one (smoke-averse) ham's opinion. Your milage may vary.

Source record: 179437

Hi,
I have a Racal 6790 receiver with a bad first mixer. Does anyone know where I can get a replacement? The defective part seems to be the actual mixer itself (module U1) on the A2 assembly. I've got a Mini-Circuits passive mixer in there now and the receiver works but it's deaf as a post.
I have a spare 1st mixer assembly (also defective, same problem) so if anyone out there repairs these things I'd be willing to swap two broken mixers toward a good one.

>Bill WA8INZ

I agree with the above comments. I've had my 8500 for over a year now, and
really like it. I do disconnect my mic (potato head) from the remote head from
time to time, and it's just like unhooking a telephone from the wall; no
problem. There are many features that I don't use, like paging, but this radio
can do just about everything you'd want. The performance seems to be better
than some other dual bands I've had. I have yet to experience any intermod
with the 8500. I too use a PC to program it, and find it to be very easy and
intuitive.

I do have 2 beefs with the radio, however: The display could be brighter in daylight use (my remote head is now located at the bottom of my dashboard, so it's not so much of a problem), and although one can enter alpha speed dial labels, there doesn't seem to be a way to recall the alpha "tags" and dial the corresponding phone number. The techs at Yaesu even admitted to me that they left something out in this regard.

Has anyone mentioned the Palomar PTR 130K? I think it was advertised in the 70s as a broadband synth solid state multimode no gaps 1-30 mhz xcvr. It had pretty low output power (20 watts?) I always thought it was vaporware until I saw a man at a swap meet selling what looked like factory remainders. I still regret not buying one which had problems with the finals (put out only about .5 watts) but had a good rcvr. He was asking $70 or so. He had several others in various states of impaired functionality. Does anyone else remeber this rig? Did it ever make it to the marketplace?

I've had one for years and never a problem. I suggest that if you
buy one (or any aluminum antenna) tune it up first and then spray
it with clear enamal spray paint. This will keep it from oxidizing
and it will look new for years.

7956. IC-751 Audio Enhance Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: n5off@w5ddl.aara.org.nospam
Message-ID: <n5off-2503972059100001@ip91.lafayette.la.pub-ip.psi.net>
Source record: 179445

I've been studying the 751 audio circuit and comparing it to the R-71.

The R-71 has richer bass tones than the 751, and I'd like to get the
751 to sound the same as the R-71.

In examining the detector/audio amp coupling circuits, it appears that
C213 (0.1) connecting the coupling circuit to ground may be sucking
out the bass tones on the IC-751.

The R-71 has a .0047 in similar service.

Has anyone done audio mods on the 751?

Is this 0.1 cap to ground the culprit?

7961. Warranty for Canadian imported scanners

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-26 00:00:00 UTC
From: WinW <ufs00776@email.sjsu.edu>
Message-ID: <01bc399d$426204e0$59194182@default>
Source record: 179450

I was wondering if Icom scanners bought from Canada but shipped to the United States can be serviced free of charge (while still under warranty) by Icom America or does it need to be shipped back to Canada for Icom Canada to service. Scanners are being sold by dealers in Canada to customers in the United States but if those scanners need to shipped back to Icom Canada then it would be more troublesome and expensive because of shipping and customs charges. Responses appreciated.

Not possiable. the IC-730 is amateur band only. You could do some
crystal exchanging on the premix board and do some minor frequency
variation. However full receive coverage will not be possiable with
the original design of the IC-730.

When I worked for a GM dealer in the early 1970's I found Delco made
excellant service manuals for their radios. You might ask the auto
dealer if he can help locate one for your radio.

ROFL! :-)

> With that said, I charge mine from the car's DC power jack (aka cigarette

> lighter socket) wit regularity, but no ill effects. Polarity is tip
positive.
> The 9 Volt unit may work.
>
> 7 3 de Matt KE6ALM

The 9 should work just fine. The trick is, the battery pack has its' own
built-in voltage regulator for the 6 AA-sized ni-cad cells. Yeah, if you
can feed it 9.5v, it'll work. And I have also plugged the car's DC straight
in. As long as the LED glows, it'll work.

7969. A strange problem on an Alnico DJ-F1T...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-27 00:00:00 UTC
From: Ray Brown <r_brown@getonthe.net>
Message-ID: <01bc3a6f$f7d45580$8eaf32cf@r_brown.getonthe.net>
Source record: 179210

Howdy! This is an interesting one. I was talking simplex to someone, line-of-sight, 100 yards away. I had a HTX-202, the other fellow had an Alnico DJ-F1T. He had twisted his squelch down to the maximum limit for some reason, and he found that he could no longer hear me at all. I could copy him just fine. We got closer together, in the same room, and found the same thing -- with his squelch set at maximum, he could not hear my radio xmit at all! Now, if he pressed the over-ride button on the front, that drops the squelch out totally, he heard it just fine.

I didn't think it was possible for a radio to be squelched so tightly that it would not hear ANYTHING AT ALL!, even a 1-watt radio a few feet away!

Comments?

Boy are *you* gonna get it for that request! :')

The latest (and final) version of Saber RSS is 7.01.
Saber "+/-" is not numbered but is not a recent issue.
I've never seen Saber "Lab Ware" ever, so I have no idea what
version is out there now.

Hope this helps.

I am looking for the person from whom I purchased a 2m FM amp about 6-8 mos. ago. This person was selling Motorola Business Band Amps 4 for $100 (or somewhere near that). I have someone else who wanted to purchase a lot of them if they are still available. If you are that person, PLEASE GET IN TOUCH WITH ME! I don't have any problems out of the one I bought and I am probably going to buy another because mine drowned in the floods here in Indiana. (If anyone is so moved by compassion at my loss that they want to GIVE me one, get with me so that I can help you ease your burden of sorrow for my loss :-}) But really, this guy is an amateur who really wants to get his hands on some for sales at local hamfests and for personal use. So if you are that person, e-mail me at this address NOW, PLEASE.

Thank you all for your consideration,
Joe Denison

Selling Icom IC-P4AT 440MHz handheld package.

In case you may not be familiar with this tiny little
handheld, I'll list it's features...

Like I said, It's tiny, measuring:

BP-111 Little (stock) battery 1.25" X 2" X 4" (Approx)
BP-113 Long life battery 1.25" X 2" X 5.75" (Approx)

Features:
100 Memories
5W Output at 13.8vDC
UT-50 CTCSS Encoder Board
LC-91 and LC-93 Vinyl Cases
OPC-254 Cigarette Lighter Cord with Plug
BP-111 7.2vDC 400mAh small battery
BP-113 7.2vDC 1200 mAh extended battery.
Smiley Antenna Set (1 Tall, gain and 1 'stubby duck')
RadioShack Speaker-mic
Original Box and Manual.

The rig is 2 years old, and in excellent condition.
I'm asking $200 for the whole package!

If you are interested please e-mail me, or visit
my web page at http://members.aol.com/unitedsnd2

I'm selling some pro audio and video gear as well...

Also for sale is a Radio Shack Frequency counter for $70

I <think> that Yaesu now makes a little charging stand (like the one included with the FT-51) that you plug the NC-60 charger into and drop in the radio. It should work with the battery alone. Perhaps someone else can confirm or deny this.

Source record: 179309

Hi Fred...
I have a 10mtr module for my 742 that I removed since the band is dead right now and installed a 220 module....10 and 6 are both easily suspectible to ignition noise from cars, etc and no tnx to Kenwood for NOT putting a NB module in the units..If you really want to go 10 or 6, do it with COMMERCIAL gear like Midland or GE with a Noise Blanker in the rcvr!!! Gear like that sells for less than the 10mtr module does (and its been discontinued! so prices MAY be cheaper but harder to find)..
If you wish to stay with Kenwood, check out RSCI's multiband adaptor for the 742 series....allows you to put 6 modules on the rig!!!
with some limitations...their web page is:
http://www.cts.com/browse/rcsi/740x.html

> are not able to separate the two antennas vertically.

One thing I would STRONGLY suggest is go the opposite way...Go 1277 in (preferably with FM) and use 434 or 439 as the output HORIZONTALLY...I realize you guys to the north cant use 421.25 anymore.....Bummer!
Use of filters etc should allow you to use a dualband antenna on the system with no problems....or separate antennas sitting side by side...BUT FILTER FILTER FILTER!
Remember TV is a WIDEBAND signal....power density is LOW....so the usual front ends narrowband FM rptr use wont cut it!!!

NOPE!!! In Motorola Manuals, it states T is for Transistorized Power Supply...NOT trunk mount...I have been working on Motorolas for 20+ years....

> an "C" means base Cabinet
> a "D" means Dash mount, etc....

Not entirely....B is also used on Base stations....but it doesnt mean Base....check with Mother Rola's manuals for the definition.

OK, but what about the squelch tail mods? I have been having problems lately with the broadcast being complete, but my Pro-51 stays on the channel, because what follows sounds just like it would if I had the squelch turned all the way down. I have heard this problem is addressable, but since you don't address it in your "Cure All - Quit asking Questions" post, I felt inclined to ask it.

Thanks buddy,
yo

** FoxGap CW Station Identifier **

This unit is great for repeater identification, when your machine is up and running, or when you are down for repair and want to maintain a presence on your frequency. Also it is perfect for beacon use, just add a transmitter. For beacon use it will control your PTT on your FM rig, or key your output in sideband mode.

Features:
* Adjustable CW speed, 5 to 60 words per minute.
* Adjustable code tone, 200 to 1200 Hz.
* 55 character message buffer, plus.
* 55 character alternate message buffer.
* Repeat message time, 1 minute to 24 hours.
* Programmable from your IBM computer.
* Windows 3.1 or Win 95 compatible.
* Adjustable audio output.
* PTT output and Key (or beacon) output.
* Programming cable supplied.
* Small size, 3"L x 1.25"W x .75"H
* Standard 12 volt operation.
* Under 50ma. current consumption.

Programming requirements: IBM or compatible computer with a mouse and one 3.5" HD floppy drive, running Windows 3.1, Win 95, or higher. And a second COMM. port (2,3, or 4).

The FoxGap CW Station Identifier lists for $69.95 For a limited time the intro offer is $50.00 Shipping extra. We can ship UPS COD cash only, MO, or certified check. For further information contact Jim at 610-588-0282
Fax 610-588-0253 Or email n2gkw@epix.net

8000. LARC hamfest vs. Peter Trapp Shows

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-27 00:00:00 UTC
From: cjs9@cornell.edu
Message-ID: <5he4fa$fac@newsstand.cit.cornell.edu>
Source record: 179322

The following is a copy of an article printed in the Liverpool Amatuer Radio Club (LARC) newsletter the LongWire.
Read it and be outraged at what can happen to us.

Return-Path: <N2TKX@aol.com>
From: N2TKX@aol.com
X-PH: V4.1@cornell.edu (Cornell Modified)
Date: Thu, 27 Mar 1997 07:52:26 -0500 (EST)
To: cjs9@cornell.edu (Carl J Steckler)
Subject: Re: Syracuse LARC Hamfest??? Whats the story?

Carl,

Here it is.

Steve

- -

The Peter Trapp Computer Show is held at the New York State Fairgrounds every 2 or 3 months during the year. As part of the agreement between Peter Trapp and the management of the New York State Fairgrounds, no other events are allowed at the Fairgrounds within 45 days of a Peter Trapp event that would compete with his event - that is, no other events where computer hardware or software are sold.

While this agreement remains basically the same in 1997 as it was in 1996, last year LARC had little problem with this requirement. About the only impact on SpringFest '96 was that Fairgrounds management requested that a sign outside our event, advertising a computer distributor as one of our sponsors be removed. We did and there were no further issues.

Apparently both Fairgrounds management and Peter Trapp subsequently became more sensitive to the issue of computer hardware and/or software being sold at our event, for we were informed that in 1997, *NO* computer hardware or software could be sold by LARC, by our exhibitors, or by &#65533;tailgaters.&#65533; Carried to it's extreme, this would have prohibited even the sale of packet radio equipment, logging software, and hamcall CD ROMs.

A number of appeals were made to Fair management and to Peter Trapp - with no avail. Mike Bragman even interceded on our part with Fair management - again to no avail. So we were faced with several choices: 1) proceed with SpringFest '97 and hope that things worked out; 2) move SpringFest '97 to a different location; or cancel SpringFest '97. Not wanting to subject our vendors and tailgaters to possible harrassment over the sale of any &#65533;computer-related&#65533; items, we chose to cancel the event for this year.

```
...........
|>
|> That's because it is made by ADI for RS. One major difference in the
|> two is the RS cannot be modified (or at least not very easily) to tx
|> out of band. The other major difference is the AT-600 costs $100 less
```

I purchased the Radio Shack version for $349. I expect that the price will come down when the HamFest season starts - that's what they did when their mobile radio was released.

I haven't seen the ADI radio, but the mods listed (for tx) on the ADI home page work just fine on the RS model.

The radio, in what ever form you buy it, is a good radio. The audio reports, etc., are good.

I like being able to play with the radio at the local RS before actually buying it - RS also has a 30 day return policy, without restocking fees, etc.

Summary: It's a good radio.

Hi Fred,
I haven't operated 6, but I have 10 meters all mode(well, not RTTY) in
the mobile, and I really like it. I have worked North Carolina,
Georgia, and maybe a couple of other states in the past couple months
with DX condx. Locally, I get about 70 miles of range on SSB. Very few
10 meter ops in the rural area where I live; no FM repeaters either. So
if you have some people locally to talk to, you would always have
something to do, and work some neat DX when 10 _really_ opens up. :)
P.S. I use a barefoot Uniden HR-2510 (about 25 watts SSB, 10 AM/FM, I
think 10 CW) with a 100" whip on the trunk.
73,
Mike KG8UK

Message-ID: <333A5F3F.103A@popd.ix.netcom.com>
Source record: 179329

The unit I'm looking for should have the following specs:
VHF, FM receiver that operates in the band from
162.250 Mhz to 173.500 Mhz. It will need approximately 250 kHz IF
bandwidth and RF channel separation of 375 kHz. The Q-57A sonobuoy
will modulate acoustic frequencies from 10 Hz to 10 kHz to a
calibrated curve and will reproduce uncalibrated signals out to
approximately 20 kHz. Depending on acoustic signal strength, the RF
carrier will be modulated up to plus and minus 105 kHz of deviation.
Most VHF FM receivers are used for communications and have bandwidths
of only 5 kHz and typically 25 kHz channel separation.

8015. Keyer Recommendations Needed

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-27 00:00:00 UTC
From: jon ayscue <ayscue@stsci.edu>
Message-ID: <333A7311.73BC@stsci.edu>
Source record: 179337

I'm in the process of re-assembling a ham station after a 15-year hiatus, and I could use recommendations on a keyer.

My key is a non-iambic Vibroplex, and my rig is a Ten-Tec Argonaut. I don't do much contest work, so I don't think I'll need a zillion memories. Portability and 12V operation would be a plus.

Any recommendations? All advice will be appreciated.

thanks in advance,

Jon Ayscue. KC3OU

8017. R8500 Mods

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-27 00:00:00 UTC
From: jwa@tellabs.com
Message-ID: <5hehaa$6ov@tellnews.tellabs.com>
Source record: 179339

Operating the Icom R8500 in other contries.

If your traveling abroad and you want to re-program your R8500 to match
the version in that country. Use the table below.

Version | | | #03 | #05 | #02
Programming | | | | |
Resistor | AUS | DEN | EUR | FRA | USA
R516 | | | X | X |
R517 | | X | | X | X
R518 | X | | X | X | X
R455 | Z | Z | Z | Z |

X = populate the position with a 3.3k ohm 603 size surface mounted resistor
Z = populate the position with a 1k ohm 603 size surface mounted resistor

+-----------+--------------------------+
Version	Frequency Coverage (MHz)
	0.10000 - 823.99999
U.S.A	849.00001 - 869.99999
	894.00001 - 1999.99999
Europe	0.10000 - 1999.99999
Australia	
France	0.10000 - 87.50000
	108.00000 - 1999.99999
+-----------+--------------------------+

Remove the top cover and locate the main PC board (it's to the rear or the
chassis and holds the speech option, see the operators manual). R516, R517
and R518 is located in the right hand corner inside the small metal can.
There will be 4 adjacent resistor positions with 2 positions populated
(R517 & R518)the top position is unknown. The small metal can is located
on the right hand side of the main board. R455 is located below and to the
left of J12 (the speech module connector). R455 is also unpopulated and
it's to the left of R140.

If you can't find a 603 size surface mounted resistor, carefully unsolder
an exsisting resistor and re-populate it in another position. R455 can be
replaced with a zero Ohm resistor by shorting the position with a fine
stran of wire that was taken from a ribbon cable.

After the modification, the radio will lose it's memories and will require
reprogramming.

One of my former cats marked my telephone jack, which pretty much
rendered it inoperable. Gold plating doesn't make any difference under
such conditions. :-)

The 12V cigarette cord will charge the battery when it is attached to the radio, but the radio itself has a voltage and current regulator inside.
It only charges the battery at a current of 60ma, so even with the small battery it will still take 10hrs to charge. It's basically a trickle charger.

> Just be very very very careful about ventilation - a charging
> lead-acid battery generates hydrogen gas in significant quantities ...

This is always good advice...

> and it was hydrogen gas that put the Hindenburg (Zepplin) down in
> flames in Lakehurst many years ago!

Wrong, wrong, WRONG!!! I _strongly_ suggest that you obtain the April / May 1997 edition of "Air & Space" magazine, and read pages 14 thru 16... the culpurit was _NOT_ hydrogen, but "... the extreme easy flammability of the covering material brough about by discharges of an electrostatic nature..." specifically, a plasma event burned up part of the top, aft covering over the tops of the bladders that held the hydrogen. The bladders themselves held until the flames burned thru the tops, then the hydrogen vented straight up and burned, and the ship sank to the ground.

It's all right there. Drift by the alt.disasters.* groups and we'll discuss this at length there. Not here. But, I had to set the record straight. Even one of our own lighter-than-air ships, if it had the same kind of covering, would have burned and crashed that night.

Hi folks,

I had similar results. I purchased a Dell computer & paid a small
fortune to get the NiMH model. It lasted for a while, but I saw no
advantage, and did not experience the longer life that the sales person
claimed. I took it out & threw it away--I now use an extension cord.

No the FT-50 cannot do that if you need this function (cross band repeat) buy a FT-51 it is a true dual bander and will do cross band repeat.

Is anyone know pros and cones about NiMH batteries. I was
> talking with a sales man he indicated that he is down sizing
> his NiMH batteries "Because of chargeing Problems !!!!".

NiMH have higher capacity and are less toxic than NiCads. The salesman is probably trying to charge them on a NiCad charger, which will not work. They have completely different charging needs.

Actually, "Premier Communications" is the name of the U.S.
based company who imports the ADI line (under the ADI label)
into the U.S. ... much the same way that "Yaesu U.S.A."
imports the Yaesu line into the U.S.; "Kenwood
Communications" imports the Kenwood line into the U.S., and
so on.

Nope.

But (assuming you are a licensed amateur, have contacted the
factory (impossible in the case of Dentron ;-)) and done
the ten meter mod, most amps will work 12 meters on either
the ten or fifteen meter setting, and will work 17 meters on
either the fifteen or twenty meter setting. Give it a try
.. do it at low power first, and look at efficiencies -
works on about 95% of the commercially-made amps on the
market.

Like most people, all I know about FCC Part 15 is what my computer manuals quote from it. I'm no expert on FCC Part 15.

Who knows? But I would vote to legalize unlicensed AM or FM stations for a max power (RMS) to the antenna of 3 Watts at 95% modulation if it were ever on a ballot they put before me to vote on.

> > Please know that in most larger cities almost ALL F.M. channels are

> > delight in such conquests.

I think he was between 107.3 and 107.9 or something like that. Only one licensed station between there in the last 15 years around here and that is some spanish station that takes up about 1200 khz of bandwith,(and they are only allowed 200 khz maximum). But does the FCC jump on them? Nope! Because that is the favorite FM station of millions of SoCal hispanics so

they get away with it. Affirmative Action screws up AGAIN!

> > Strange that many Pirate stations that have tried operating in
> > International Waters soon find armed American federal agents who will
> > seize these maritime stations at will. And I repeat, International
> > Waters... Ahhaaa, America... land of the free?

That's when Uncle Sam becomes a pirate, in the maritime sense of the word "pirate". I have nothing against offshore stations in international waters, even if they cause interference to me personally. As a mariner, I VERY strongly support the sovereignty of a private vessel and it's captain in international waters, including his right to legally execute someone for something as small as pissing on the poop deck if he feels like it. See my comments below about this political stuff.

> > For years a x-ham (ex-WB6JAC ~ Richard Burton) broadcasts on 147.435
> > MHz Repeater at will without a valid license! Would you believe he
> > has spent two terms in federal prison for such offences (and more) and
> > he still continues to broadcast today?

They anly let that repeater operate in the hopes that the animals will stay in their cage,(that repeater). Sometimes they don't. It's then that people start talking about the damage that buckshot can do to antennas and coax. ;-)

Especially when these 147.435 lamers interfere with the Catalina Swap Net. I've felt like doing something nasty to them myself when they've pulled that kind of crap... and who's to say it won't happen in the future.

> International waters aren't so international if the boat is registered
> in America. Brian

Not true except for government-owned vessels.

Legally, where the vessel is registered should make no difference. I am not a pro-tyrany person who favors the government controlling every little thing we do. In fact, I am a supporter of any private responsible free-republic militia and I am one of the "New Black Panthers", and so conservative I make Rush Limbaugh look like just another a spineless moderate republican... I even wrote-in Alan Keyes last November and even convinced many of my friends of all colors and many of my family to do so. So even though I AM for enforcment of part 97,(and maybe even for cutting out Richard Butthead... er... I mean Burton's vocal chords), I am NOT for everything the government and/or the FCC has it's dirty little hands into nor am I for the assinine fees they charge for many things,(like shortwave licenses, FFL's, and so on). And what they NEED to be hard nosed about,(CB radio), they don't care a whit about because there's not enough money in it for them. After all... money is the grease on their axles... without it you can get nowhere with these government agencies.

Let's face it folks... dispite what the ballot says, we live under a MONENCRATIC government... where he who has the gold rules.

Ted <ted@caprica.com>

Howdy, In my experience, Motorola's NiMH batts SUCK! If I get 6mo out
of them I feel lucky. When I warranty them, Mot pulls off the date
codes from the replacements so I can't send them in when they croak.
Ask the LAPD why they are going back to Nicads. I hope the amateur mfrs
are having better luck. 73, Mike.

Can anyone advise, is ICOM-706 really great stuff for ham, or just a toy?

Thanks from Russia.

8067. FS: Xtals for Drake SPR-4 and RR-1

Jerry Rosenzweig (j-rosenzweig@worldnet.att.net) wrote:
: I've just gotten started and am looking for a dual-band HT. Seems like
: the FT-50R is the hot item out there now (have seen a lot of postings
: and been to the site). What about the ICOM W-32? Can someone with some
: experience with these or others help me out with the "whats" and
: "whys"?
: Any help would be greatly appreciated.

I have an FT-50R. Its plagued with some ergonomic and technical problems
(like the power button which isn't recessed enough, and the screen which
has a too narrow field of view). Some people find the keys too small,
and I think they could have made better use of the case exterior by providing
seperate speaker and microphone jacks, as well as a battery charger on
the battery instead of the radio. The stock antenna sucks, and it uses
an SMA connector.

Other than that stuff, the only real drawback is that it doesn't have
dual receive or crossband.

Overall, I still think its a great radio. Excellent receiver, wide frequency
range, people have claimed that it will do 1.25M TX, although its not type
accepted. Very rugged, very water resistant, and pretty small. The battery
also lasts a long time. Plus, the all important factor, price. They can
be had for the price of many 2M rigs, or possibly just slightly higher.
It's certainly one of the cheapest dualbanders.

You gotta read the manual more carefully. The manual clearly says that it DOES have dual VFOs. In fact, it doesn't really explain why it can't do dual receive or crossband repeat. The only thing I can possibly think of is that it only has one receiver and one transmitter. Although I still don't see why it can't do crossband repeat.

>slides a little too-easy on this one...

According to my HTX-202 manual (mine was produced about 2 years ago) the
power input from the battery is diode ORed with the 12V external power
via a pair of Shottky rectifiers. It's possible that the rectifier from
your battery-pack connector has failed or come disconnected.

Should be an easy fix for a technician. Check with your local RS store.
I think (verify with them) that they charge $32 flat rate for labor to
repair these.

Bill,
I purchased what I believe to have been the very first TS-570D delivered to an Indiana dealer and have not had any problems of the nature that you have described. I did experience a capacitor failure in the automatic antenna tuner while attempting to tune a very short antenna on 75 meters. The antenna was far out of the stated tuning range capacity of the TS-570D tuner but it still accomplished a match. The failure was due to excessive RF current in the T-MATCH because of the very low impedance of the load. After explaining what happened Kenwood advised me that this was not a warranty issue but provided me with the replacement parts anyway.

I am aware of a couple other trouble free early TS-570Ds here in the Midwest. Possibly something unique to your station is related to the failures that you have experienced.

If the amp has tuned input you don't need to use the 850 ant tuner but it wouldn't hurt. If the amp doesn't have tuned input you wont get much out of your 850 becasue the unit will cut back on power because of mismatch.

A bit intermod prone is in my experience with the yaesu Ft
5100 and FT-5200's quite an understatement. I still own a 5200 and
while it has some nice features it's one of the worst radios as far as
intermod goes, if you live or travel alot in or near big cities I'd
look for something else. I also own an Alinco 570 which is bullet
proof as far as intermod goes

This is showing your ignorance. In .pinerc, there is a setting to put the signature at the bottom. However, if you are such a fool as to think posting all this crap on your signature is going to prevent your receiving spam, you probably wouldn't know how to edit it, anyway. Why not join the group heading out to the comet?

Yep - the FT8000 has receive up to 1300MHz! It is pretty deaf above 1200
though, so I'm told. It misses out on the full remote control option and
removable head of the 8500 and doesn't have the alpha-numeric portion of
the display but for all that some reckon it's easier to use than the
8500 too. It's also about $200 cheaper than the 8500 here in Australia.

Cheers,

>
>Alan
>W1HYV

WHAT AMP? It's extremely difficult to answer your question without details - your question is much like asking "how high is high?". IF the amp in question contains a proper tuned input of 50-70 ohms, NO tuning between exciter and amp should be required. But if the amp is merely directly grid or cathode fed, the input impedance can vary widely from band to band, and also swing substantially from no-load to full-load - possibly enough to be outside your 850's ability to match it even WITH your 850's built-in tuner. Until recently, I had an 850, and still have the 3 amps I used with the 850 - a Clipperton L, an Amp supply LK500-NTC, and a Henry 3K. ALL these amps have a "tuned input, but the Clipperton's input circuit was so far off the required impedance for either my 850 or 450, that I had to disable the amps input circuit and feed the cathodes directly - which the exciters were THEN able to match. My other amp input circuits work just fine.

That takes care of MY experience - yours could easily vary depending on exactly what amp you are refering to!

8128. TM-V7A Owner's

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-29 00:00:00 UTC
From: Steve <ssable@tdi.net>
Message-ID: <01bc3c94$9ad1d340$2121d5d0@ssable.tdi.net>
Source record: 179149

I have caught some un-usual happening's with this new rig and
wonder if other owner's can confirm.
I know the book says that some DTMF tone's can affect operation
with the the microphone control is on.
What has happened to me so far is: Playing a CD loud cause the
radio to beep and do some radio function's by itself, mainly
setting CTRL for one band.
Also while in receive VFO mode and scanning the 440mhz freq while
traveling to Toronto I came across some paging service which made
the TM-V7A go nut's with beeping.
So far if I shut off the microphone control nothing seem's to
affect the rig.
Anyone else???

8130. FT-767GX Problem with 17-10 meters - help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-29 00:00:00 UTC
From: "Terrence R. Redding" <pba-cct@flinet.com>
Message-ID: <333D4FDB.61A@flinet.com>
Source record: 179151

I have a FT-767GX that had been working fine. Today I noticed the radio was very hot and the fan was not running. So I think the fan may be out.

Can I replace it myself? Is this a commonn failure? What are the chances it is just the heat sensor and not the fan? Has anyone experienced this problem.

I noticed the fan problem as I was chaging bands from 20 to 15 meters. 15 meters didn't work. Instead the power out meter read off the scale and the exxternal watt meter showed out put power and high SWR. My guess is I am transmitting out of band and that the transmitter section is experiencing parasitic run-away. It also occurs on 15, 12, and 10 meters.

Any suggestions on how to proceed will be greatly appreciated.

73 Terry

8131. Re: ICOM-706

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-29 00:00:00 UTC
From: "Dan C. Cui" <dcui@nh.ultranet.com>
Message-ID: <01bc3bd7$c11f6980$08b8b4cf@dan>
Source record: 179167

I recently bought a 706 (Jan. 97). I spent over 1 year looking and talking to folks with many different radios in their vehicles. I selected the 706 due to size and capabilities over the other radios. Although the 2M section of the radio is not what I would have liked (I've kept my 50 watt 2m rig in the car as well), the HF capability is GREAT. Could use better filters for sideband, but I understand they've corrected some of this in the new 706 MKII. I've gotten great signal and just as important, great audio reports from all over the world (I commute 70 miles, one way, to my office). Haven't had much chance to use the 6M portion except for local repeaters.
Some items I would like to see....better VHF coverage...at least to the weather frequencies, DTMF built into the microphone, better sideband filters.

As for antennas....I bought the Comet CA-HV antenna ($130 US) which gives you coverage for 2M, 6M and your choice of two HF bands (No 75/80M). I decided to mount all the coils to the antenna so that it covered 2,6,10,15,20,40m at the same time....it works great and it's much cheaper than anything out there for that price.

Anyway, hope this helps...

Message-ID: <5hhmvb$3v1@sjx-ixn8.ix.netcom.com>
Source record: 179171

Hi,

I'm hoping some of you can help. I'm looking for a good dual-band swr meter (2 meter &440) . I will be using it with a dual band HT and soon (hopefully) with a dual band mobile. I like the MFJ SWR Analyzer, but can't (read: shouldn't) spend that much. Any suggestions would be greatly appreciated.

I currently have a Cushcraft dual-band antenna on the roof, and would like to get some kind of setup in my car. I have a couple of cheap mag-mounts for the car, but I'm leary (sp?) of using them until I can tune them.

Please post responses here or e-mail to: daveey@ix.netcom.com

Thanx again for your help!

Dave KB9MXD

Source record: 179174

I have a friend that has a Glen Model 326-G Digital Controller(VFO). He needs a manual for this vintage piece of equipment. I believe that this VFO was made during the late 70's and used on 23 channel CB's to expand the frequency coverage. He wants to see if this VFO can be adapted for use with older Ham Gear or with CB's for 10 meter SSB coverage. Anyone that could help him out, please e-mail me and I'll pass the info along.
Thanks!!

OK Steve whatever you say, if you want to believe you have a dual bander please be my guest but let's return to the original poster's question. He specifically asked, "Is the FT-50 a dual bander, can you talk on 2m and listen on 440 AT THE SAME TIME?" The answer is NO YOU CANNOT. Try reading the original post below.

If you want to believe you some how got a real dual bander for $100 less than a true dual bander sells for there is nothing I can do to change your mind.

End to Steve

Maurizio,

To once again answer your question the FT-50 will not do what you want the FT-51 will as will the TH-79 Kenwood and several others. If I can help you further send me an email.

Source record: 179180

Hi Justin -- they were one of the first all-solid state rigs made in the late 1970's. On SSB, they are very good. They were not set up very well for the CW operator. You should be able to get the 210 or 210X with station "console" pwr supply for $300 or less. SSB transmit and receive audio is quite good, actually. They do not tolerate high VSWR (no damage, just low power output) so I suggest always using an antenna tuner when running with VSWR above 1.5:1

All in all, a good value if you dont run CW.

Joe

I tried the "potato" and purchased the MH-39 mike with my FT-8500. I found the potato too much
of a handfull (we talkin' radio now) even though I have large hands (per glove size). I haven't
found the single pot a problem to operate. Plus, the smaller mike takes up less space on the
dash. Overall, I have been very pleased with the radio.

But only one VFO can be active at any time. You can monitor both VFOs by
putting the radio in dual watch mode. But all that does is exchange the
active VFOs and check for open squelch. It's like scanning the VFOs.

I noticed you didn't include the Kenwood TH-79. I own one after owning the compatible mobile 742. The biggest plus to my combination is that the 79 has a remote control mode that allows you to control the other unit, 742 or 733, ect, like other radios can except you push one button for a function and it does the multi code for you. It saves from having to know all the codes, and it displays them on the display when you activate one. As far as performance, I LOVE IT! I owned a Icom 24AT that I like much too, yet not as much as this. Slim, light, and easy read display. Instructions are built in too, just push menu button. Ok enough I sound like I sell them or something.

Good luck and have fun

I have 4 cases (50 each) of:

Fine Grain Precision Metal Carbide Drill Bits #57
Perfect for P.C. Boarding electronic components.

I will sell it for $25 each case.
I have 2 cases left!!!!
That's about 50 cents a bit!!!!
Can't beat that for carbide drill bits.

Please reply to:

I have a couple of them they are rather nice for packet and voice. If
you go in the back for the packet connection you can still use the mike
with the TNC hooked up. Considering the market for this type of radio
it is a good price. I bought a few extra of the mounting brackets and
leave them where I want to use the radios. They are a bit intermod
prone so if you live in a big city or near a pager transmitter I would
suggest building or buying a notch filter.

8157. Fuel Pump RF Noise in 50 MHz 2-way Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-29 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <5hhv0ismv1@ralph.vnet.net>
Source record: 179193
Cross-posted to: rec.autos.makers.saturn,rec.radio.amateur.equipment

I just installed a 50 MHz amateur radio in my 1992 Saturn SL2, and
discovered that something is making a lot of racket in that frequency band.
(146 MHz and 440 MHz are quiet, as is the AM and FM broadcast radio).

I suspect the fuel pump. The noise starts when I turn the key one notch,
before the engine starts. It lasts for a few seconds, while the fuel pump
is running, and then stops. Then, I start the engine, and the noise is
back. It is strong enough to interfere with all but the strongest signals.

Has anyone cured this noise? Does anyone know if Saturn has a cure?

Thanks,

Gary KN4AQ

Our ARES group purchased an Atlas 210 to use in our mobile response
vehicle. We had so much trouble with the rig in regards to RFI, both on
receive and transmit, that we found it basically useless in the field.
We got rid of it.

As in all used rigs, service and especially parts are an issue, Atlas
made nice radios, I had a 350XL and loved it, but the parts sources
are sort of specialized, as are service sources should you not be able
to work on internal problems yourself. The 21 can be a nice entry
level rig that will give you a lot of pleasure if it is in good shape.
Should be in the 200-300 range with the AC console, and hopefully some
extras (esp. BOOKS!)

Hello Steve,

We buy these exact items from RF Connection:

The R.F. Connection
213 N. Frederick Ave. Suite 11-W
Gaithersburg, MD 20877
USA

Tech Support (301) 840-5477
Orders (800) 783-2666
24 hour Fax (301) 869-3680
e-mail rfc@therfc.com

http://www.therfc.com

They are honest, competent and a pleasure to deal with. Ship quick and
have nearly everything in stock. They have a nice rubber strain relief
boot for different sizes of connectors which is available sometimes in
many colors or typically black.

You also can purchase from them the glue filled heatshrink in many
sizes which works well as strain relief and waterproofing for weird
sized connectors.

Ask for Joel and tell him where you heard of them. Highly recommended.

Hope this helps ..... Steve

Date: 1997-03-29 00:00:00 UTC
From: hb <hb@hevanet.com>
Message-ID: <333D3591.2E5A@hevanet.com>
Source record: 179204

With the proper cable, works with most any ICON HF rig
No external AC or power-cube needed

Used little over 5 years and never been fed with more than 150 watts

Original carton and plastic wrap, instructions and cable for IC-751.
Looks and works as if brand new

Dark/light gray, lightweight, physically a match for the IC-735

Fully automatic, presets make tuning very fast
Multi-coax, 1 longwire feed and a bypass mode

$300 plus shipping (I pay). Lists for $529 in current HRO catalogue.

Hello all,
I have a Yaesu FT-2500M for sale.
About 7 months old,low hours,great condition,alpha display,mil-spec.
construction,5-25-50 watt output,31 memories,built in tone
encoder,extended receive,mod has been done for extended transmit.

I have box,packing,bracket,wiring,manual,etc.

Asking $200 and I pay shipping.

Also have an Allmax eprom programmer.

Used 1 time.I paid $650 for it and will negotiate price.

I also have an MFJ 949E tuner for 1.5-30MhZ.

I transmitted once with it.No box or manual but it's in excellent
condition.

Asking $100 or best offer.

Also have an Astatic Night Eagle microphone,never used.I never even put
a plug on the cable.No box,have manual.A little dust but looks
beautiful.

Asking $90.

If interested in anything e-mail me at larry666@gdi.net

8185. ? Standard's C5900DA tribander

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-30 00:00:00 UTC
From: Nelson <5560@notso.net>
Message-ID: <333F1F21.47F5@notso.net>
Source record: 179022

Howdy:
I am thinking on spending some hard earned cash on the Standard C5900DA tribander. The review in QST remarked that the transmitted audio sounded a little restricted. Can any one with a good ear and some experience with this rig please reply on this matter? Thanks! Nelson.

8186. Help with FT-767GX Fan and 17-10 meters

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-30 00:00:00 UTC
From: "Terrence R. Redding" <pba-cct@flinet.com>
Message-ID: <333E207E.2433@flinet.com>
Source record: 179023

The fan quit today and apparently so did all bands above 20 meters.

Above 20 meters the rig seems to go into self oscilation.

Has anyone experiened this before?

Terry

8187. FS: Military Discone Antenna AS-3886-AN

rec.radio.swap,rec.radio.scanner,alt.radio.scanner,triangle.radio,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.pirate

I have for sale a couple of AS-3886-AN Military Discone antennas.
The antenna is 108" tall, folds into a 3 foot canvas bag with shoulder strap. N connector, rated at 5KW, made by TRW for the TRC-191 system. Perfect for 6 meters, scanners listeners, FM BC and anyone who needs a good, resonant antenna. Military collectors will like them too!

These antennas are NEW/complete in bubble wrap & 36" canvas bag:

frequency range: 25MHz to 400MHz(if coaxial network removed(in hub)
you can go lower into 15m by adding wire ring to top
gain: unity gain over frequency
geometry: discone
weight: 8 pounds
mounting: snap in mast adapter 1 3/4"
materials aluminum tubing & hub, stainless hardware
color GI Joe Green

top elements 35"long x 6
bottom elements 102" long x 6

I will ship for $200 each plus $10 shipping
I have 3 left

102" replacement elements, fold to 36"(3 fold) $10.00 ea. $4 shipping
These elements are available in quantity, please e-mail with the amount. Priced accordingly.

The best $200 discone you can buy when you see what a $100 discone looks like. There simply is no way you can't like it.
It has alot of possibilities if you like antenna brewing.

Please e-mail me to reserve one & my address info: rafman@kerrlake.com
Thank you!

: Monroe Public Schools, Monroe, Michigan

I faced the same question a year or so ago and bought the 6M module.
It has been really fun when the band opens and really boring
any other time. Such is the nature of 6, especially on FM.
There are no 6M repeaters in my area, so simplex is it.

I have toyed with buying the 10 FM module on closeout. Seems to
me AES had them marked down in price and they were unloading them.
With no 10M repeaters around, I suspect my 10 FM experience
would be similar to 6M FM but with more frequent openings. In fact,
as we dig our way out of the sunspot trough, 10 FM could get really
fun again. (It was on the last cycle.)

Check to see if you have any repeaters on these bands in your
area...they might help fill in the dead spots of between band
openings.

8191. Re: Yaesu FT227R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-30 00:00:00 UTC
From: ka6bpq@aol.com
Message-ID: <19970330063600.BAA06337@ladder01.news.aol.com>
Source record: 179060

Geoff,

The Memorizer function of the FT-227R simply remembers one single frequency and can also be used for spilt frequency operation. When the left most push button (M) on the upper front panel is pushed in, the FT-227R remembers the freq that's on the display. You can now change the freq and return to the memorized freq by pressing in the fourth button, upper left, (MR).

The four position rotary switch used to set your offset follows the Memorizer function. When (MR) is pressed and a freq. is memorized with the (M) switch, you can make the FT-227R transmit simplex, + 600, -600 from the memorized freq. The (memory) position on the rotary switch will receive on the displayed freq and transmit on the memorized freq allowing you to use an odd TX/RX split.

Also, to have a freq preloaded that the rig will power up at you must select a freq using the (M) push button. As long as power is applied while turned off, the FT-227R will remember both a memorized freq and the freq. that was on the display when the power was turned off. Without doing this you probably noticed that the rig will always power up to 147.00. I don't know any mods for this rig but would like to. The only thing I have done with mine is to add a CTCSS tone encoder board. I have had this rig for alot of years now and it still works great.

Hope this helps, let me know if it does,

Hello All,

Under the assumption that propagation will improve in the next year or so and the HF bands will pick up (ha ha), I'm in the mood for a new rig to replace my trusty 520S. Requirements would be all transistorized/no tune finals, cover the WARC bands, and general coverage receive. The Kenwood TS-930S looks like it would do perfectly for me, but a buddy of mine seems to recall some sort of problem with it, and felt I should keep looking. Anybody with any first hand knowledge of the performance of this radio, and caveats, etc? I'd appreciate the help.

Hello,

Does anybody have the website that had many service manuals of old receivers and swl equipment from about 2 months ago. I was posted on the newsgroups. It also had many new amateur radio manuals for sale also. I believe the guy was located in the midwest. The prices averaged about $25 each.

Thanks if you have any info on this.

Bill

Keith-

It's worth whatever you can sell it for.

It's a good rig if it's working right.
The PTO's can be a problem and they have
some other quirks. Some of the parts are
impossible to get.

As to value, I have the Swan and the Cubic
versions of this rig and wouldn't sell for
less than $350.

I wouldn't pay much more than $125 for
one though. The PTO thing I've
seen is folks try to fix them and render them
almost impossible to get right again.

> W1HYV
Hi Alan. I have a TS-850SAT driving an Ameriton AL-811A. There is some
mismatch on the 12M and 17M Bands. I think Ameritron has a tuned input
circuit for 12M/10M and another for 15M/17M resulting in a slight
mismatch. Using the TS-850SAT tuner in or out doesn't make much
difference in the AL-811A output. I usually use it in. No Problems.

As for a tuner on the output -- by all means. I use all resonant
antennas (cushcraft R5 and 32 foot 40m vertical) so no tuner needed.
Keeps RF out of the shack and into the antenna.

Hello!

I am looking at buying a FL2100B amp from a friend. I have a ICOM 751A HF rig. I only have the instruction manual. I does not have a schematic in it, just a block dia.

The YAESU amp has a -13 volt coil for the relay. Will this work with my ICOM 751A direct, or will I have to build a relay to short out the amp relay.

Thanks for the help.

As far as I know there is no rx for cellular--Although you can program the channels in via ADMS software. Intermod has not been a problem in fact it is better than my tm-742a and ic706 on 2m. Good rig, but programming it can be a pain without the software. The ADMS software makes programming it a breeze! You can also save and upload freqs. in a flash!
There is the green wire mod for expanded tx 130-179mhz
Good luck

8219. 38.4K wireless modems for sale or trade

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-30 00:00:00 UTC
From: joshin@cats.ucsc.edu
Message-ID: <5hmacs$l5t@darkstar.ucsc.edu>
Source record: 179088
Cross-posted to: alt.radio.pirate,rec.radio.swap,rec.radio.amateur.equipment

Hi,

I have a pair of long range wireless radio modems that I'd like to trade (or sell) for either Ham or shortwave equipment. They were partial payment for a contracting job I had and I don't have much use for them. Though, it was fun to play on the net from the beach 1.5 miles away (connected through a unix server).

They are the GRE Gina 6000N spread-spectrum radio's and full specs for them can be found at "http://www.greamerica.com/6000n.html". I also have 50' of low loss cable (can't remember the designation) and a yagi antenna with 6db of gain.

The radio modems have a communications speed of 38.4Kbps full duplex with an airspeed of 128kbps. They are spread-spectrum in the 900mhz band so no license is required.

I'd like $1000 cash or equivalent in trade. The modems retail for >$700 each according to GRE. I just want to recoup my losses from the failed contract job.

I'm looking for ham radio equipment, scanners, and shortwave radios (AOR8000, Icom 725, and similar). Micro- power FM broadcasting equipment is also entertaining as is any cool electronic stuff... :-)

8235. NEED: Yaesu FR101 part

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-30 00:00:00 UTC
From: Larry Tucker <sts@ac.net>
Message-ID: <333F1F08.25C3@ac.net>
Source record: 179104

Hello,

I am looking for a Mixer chip # MC1496G for a Yaesu FR101 Reciever. I have checked with Yaesu and the other usual sources including ECG and SK line. They all tell me it is oblolete and no longer available.

This is the 2nd Mixer on the MIX/NB board in the receiver. I would take the complete board from a junker or the entire junker if you have one. I am restoring a rig and need this part to finish the project.

I can be reached at: sts@ac.net

Thanks much,

Larry, N4KVP

From: James Parsons <k5rov1@worldnet.att.net>
Message-ID: <333F0EFD.51E4@worldnet.att.net>
Source record: 179106

Would someone please take the time to give me the current market value of a Collins 310B. I have one I plan on selling or trading. It belonged to my father-in-law (W5GXO, McComb, Ms) for many years. I have had it for about 35 years. The last time I used it was about 30 years ago, on CW. It has been in my shack on a shelf ever since.

The unit has a 2E26 in the final, and coils that look like B&W bandswitches for the plate circuit. The cabinet is untouched, no holes drilled. As far as I know, there was never any mods done to this transmitter. My father-in law used in first for CW, then he used it to drive a Heath SB-10 sideband adaptor, which drove a pair of 837's.

It is a beautiful piece of equipment and would sure match a Collins 75A1. If I had one, I would make an old time station out of it, if I had the room. I am a CW operator, almost 100%, and I sure get tempted to plug it in....but I guess its time to put it into a younger persons hands.

What is it worth?

Yes, they are getting old and didn't sell very many so there are not many around. As far as being "good as gold" they are useful for use as remote bases on a repeater but the Kenwood 742 is a MUCH better radio for those that want a mobile. I've purchased around 10 assorted band units with an average price of around $200 in the last month or so. The 220 units are worth very little because their are MANY of them available. The last one I purchased I paid $150. 10m and 1.2 are the rarest. I recently purchased two complete IC901's each with a 1.2ghz band unit for $250 each though and an IC900 (worth more than IC901 because the 2m and 440 bands are modules not internal like the IC901) with 2m,440, and 220 for $350. They IC901 itself is not very valuable because it is really just an older dual bander.

I've only been looking for a couple of months so I treat this as another "hams tale" (as in old wives tale) just like so many other rumors that get started

Not only that, but look at the sensitivity of the reciever! It'll be
relatively 'deaf'. Well, for something that broadbanded, what can you
hope for for the price. (And the intended market). And not even a
frequency readout. :-)
I'm waiting for the multimode 2 meter!

it expands to 1.8mhz - 30mhz by Temporarily jump TP-2003 to ground, press &
hold [ssb]&[am] & turn power on. (display will show 02-OFF) rotate main
control knob to show 02-ON, press AM, (the display should show 7.000.00
LSB) turn off rig,
Press and hold the memory [down] & [up] buttons and turn rig on. Turn off
the rig. Remove jumper to ground on TP-2003 and that's it
Good luck!

In tests that I have done, I found about 33% more capacity for the same
size NiMH batteries. Some chargers look for a negative voltage slope of a
charged NiCAD, and can be problematic for NiMH, but for the simple chargers
I've used....no problem.

Hi Tim:
Starting with the radio off Hold the MHZ button while turning the rig
on, release MHZ and press F/W within 5 seconds, then use the tuning knob
to set brightness. Press F/W or wait 5 seconds to go back to normal
opration. Enjoy

>> From all i have read, and what i have experienced you loose it forever.
>> Ed

Forever ?, no no no, :)

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not
same mess up (magic) in the Memory of the unit.

That does not mean that it is not possible to enter aditional data to
the ARS Memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

(See my message about the software BAND_PLAN changes, using that method
you can restore your old BAND_X (and change fast to any other BAND_X))
ARS will work again !!! (as I said: not on BAND_FrEE or BAND_F)

Indi.

Hello everyone!!

Please take the time to have a look at my new Web Site. It's only a first attempt so don't be too critical. At present it only has a few bits active but each week I intend to extend it so BOOKMARK it and call back each week.

It will hold a list of links I have found of interest both amateur and commercial, plus the EDDYSTONE USER GROUP. In addition there will be items for sale including BoatAnchors, previously enjoyed classic books on radio, old magazines and much more.

The address is http://www.plasma.co.uk/simon/ so do have a look and I hope you find it useful. Any constructive comments would be most welcome.

Regards

Simon

It also has changed somewhat. Back when people bought an HW-8, followed the step-by-step instructions, poked the components into the holes, and soldered them, they would tell you they were using a "Heath HW-8". Apparently, this would now be a "homebrew" rig.

Admittedly, this is slightly more complex than taking a rig out of a box and turning on a switch, and I'm surely in favor of kit building. But is it now "homebrew"?

8269. Need Mounting Advice for 2M Mobile Rig

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-31 00:00:00 UTC
From: w6uv@ccnet.com
Message-ID: <333f50de.9269318@news.ccnet.com>
Source record: 178972
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I need to replace the trunk-mount 2 meter rig I have in my car and I'm thinking of replacing it with the Yaesu FT-2500M, or something similar.

Since this type of radio isn't trunk mounted, I need to mount it up near the dashboard. My car (Mazda 626) has an in-dash radio-cassette player, and right below it is an empty space which is reserved for the factory-installed CD player (which I don't have). The space is filled with a plastic insert for storing stuff like cassette tapes, etc. I plan to remove the plastic insert and mount the 2M rig in the empty slot.

Has anyone mounted a small mobile rig in such a space? Are there mounting adapters for common Yaesu, Icom, or Kenwood rigs and/or 2 meter rigs that are designed to fit in such a space, which I assume must be a standard size, since most after-market tape and CD players seem to fit as if they were made to?

I'm also looking for hints for removing the dashboard front panel to gain access to the mounting slot without damaging something in the process.

Source record: 178982

I had (have) one of the early versions of the 210x. A few years ago I bought a later serial # version. The later version converted electrolytics to tantalums, added about a half-dozen suppression chokes, changed the layout wherever feedback or other problems were reported, and kept up refinements throughout the production history. These rigs have one of the finest IF xtal filters I have seen spec'd, with skirt rejection steep down to at least 132 db and wide enough at the top (2.75 KHz) to maximize intelligibility, which accounts for the excellent "sound" of the rig. Single-conversion design philosophy kept it simple, stupid, but no easier to use mobile rig on the market. It was a knock-off of a popular military rig of the era, I have read. These were rated at 200 watts input to 15 mtrs, I think. I added a simple schottky diode clipper to my if output to limit modulation peaks and I always had contacts on the road. I still like this radio and think that if it is a later version it will give a very good showing in mobile usage. K9ZAT

Fred,

You said the key word. FM! When the 10 Meter FM band is open it is a mad house. A minimum of frequencies and everyone trying to use the computers all at the same time. I work 10 FM and it drives me nuts, at times. Now, which will be open the most? 10, which will be the most fun? I also work 6 FM and there are a bunch of repeaters and several simplex frequencies with the Sporadic E and other fun things and also the neat locals you will find that you never knew were there I think you might enjoy 6 more. If you are in a fairly populus area you will probably find a bunch of guys on and maybe a repeater. If you are in UP, well, you might find some quiet days. You may well find, too that the 6 simplex carries a bit more than the 10. Now, if you were going multimode, I'd say 10.

73 and gud dx, Paul W4YRL

FS: Assorted HT Antennas, HT holder, Mot. pager case
-=-

I have the following items for sale after cleaning up
around here. Hopefully someone can use these odds
and ends. Thanks.

Anli RD-8 -- $9

Now known as "Premier Communications". Dual-band
handheld antenna, 6.5" long, flexible, gold-plated BNC
connector.

.....ooOoo.....

Comet CH-32 Miracle Baby -- $16

1.75", BNC stubby antenna. An OK performer on VHF,
a great performer on UHF. Excellent choice for
hamfests, cross-band repeating, nearby repeaters, etc.
Packaged as a Tri-band antenna -- The third band being
900MHz for listening.

.....ooOoo.....

Diamond SRH-519 Slim Dual bander -- $16

Dual band HT antenna, Flexible, 8" SMA connector.
Excellent choice for FT-50's, standards, etc.. Very
flexible, lightweight.

.....ooOoo.....

Generic 2m/440 set -- $8

Two monoband HT antennas, VHF and UHF. The VHF is
about 7" and the UHF is a stubby at 3". Both are very
durable and thick, with rubber coated wound wire. Both
fine performers with BNC connectors. Great for compact
and durable uses. Stubby performs very well.

.....ooOoo.....

The Pouch -- Size SS -- $7

Protective carrying case made of black nylon bonded
to bouncy neoprene. Quick release, snap-out belt loop
lets you remove entire holster from your belt instantly.

Web restraining strap secured on front with velcro.
(See HRO catalog). Fits 51R, 22A, 42A, etc.

.....ooOoo.....

Motorola Bravo/Bravo Plus Casing -- $3

Neon yellow casing for pagers. With clip. I have
no use for this thing anymore. Restyle your black
pager with something more exciting. :)

-=-=-=-=-=-=-=-

Email reply to cobra295@ix.netcom.com if interested in
any of the above items. Prices reflect 50% or less of
HRO catalog prices. Priority will be given to those
who buy multiple items. Shipping will be USPS only
and will vary depending on location. Will only deal
with CONUS. Thanks.

I have the same issue pretty much....my local PD uses DTMF for unit ID I
think and the 6 will cause that strange melody from my TMV7A...I do love
the rig though, just wish they had put MUTE in like the 733A!!!!

Thanks for the tip on the keystroke from the MIC that's really helpful.

Anyone know of the undocumented control codes and/or mods to the
Icom W31A?

Here is a .gif file of the mods for expanded tx and
expanded/cellular/800 MHz rx. It is a bad scan from the Artsci mod book,
so be careful. Expanded rx, direct frequency input, and crossband repeat
are software mods (keypad combination) and are the same as for the Icom
IC-Z1A. If you need the crossband repeat and direct freq. entry combos,
E-mail me and I'll look them up. Use at your own risk.

Hello,
Cutting the green wire will not do it by itself.The green wire is on the control board,behind the faceplate.Remove top cover and it should be visble.Cut the wire and re-assemble radio.
Now you must reset the radio so write down your memories.Press and hold, all at the same time,D\MR,Rev,and ENT while turning on the radio. Next turn off the radio and press and hold Scan and Home while turning on the radio and that will enable extended receive.
GOOD LUCK AND DO NOT TRANSMIT OUT OF THE HAM BANDS WITH THIS RADIO!!

73,
Larry

8293. TM-V7A no clone?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-31 00:00:00 UTC
From: Rick Bates <rbates@wco.com>
Message-ID: <33403ABB.15E3@wco.com>
Source record: 178996

Hi all.

I recently got a TM-V7a and know that the lack of mute has already been discussed (not nice Kenwood, not nice, I *liked* that feature).

One of the other features I use a fair amount is the cloning feature. It is not mentioned in the manual at all and a response from Kenwood said that in order to clone the radio I had to buy a $40 package from Advanced Computing Systems: http://www.acsys.com

Has someone figured out another way to clone that is easy before I try this package? Although this package sounds nice (sit at the keyboard and type, then dump to the radio instead of punching the buttons for an hour), I am surprised that Kenwood would drop this feature. It is even available on their LMR radios.

Someone help?

Rick WA6NHC

Add a Plectron or Motorola Alert
Desktop Monitor Receiver |
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance | squad members came to rely on their crystal controlled, | transistor Plectron and Motorola desktop monitor receivers. | They have now been replaced by battery operated portable | pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models | which can be powered from 117VAC or 12VDC with the proper | mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

I am not exactly sure what you mean about cross band repeating, but the FT-50R can transmit on one band and receive on another, so you can use it with repeaters that have a 440 input and a 2m output. The procedure to do this is in the FT-50R manual.

Hi Roy,

I would call it a KIT. However, I do not believe you have to design the
rig in order for it to be homebrew. Perhaps it starts being homebrew
when you layout or make the circuit board and housing- a few mods would
certainly qualify. Call it what you want- it should be encouraged.

As an aside- I never met a more genuine group of courteous and
knowledgeable (sp?) hams than at the Dayton QRP get togethers- old time
ham radio.

The FNB-41 is slightly thicker, but well worth it because you get full power. You can also drop the power and make it last longer. This past Sat, saw a couple venders selling new FNB-41 batteries for $30 to $40 at the TRW swap meet. I got one barely used last month for $25.

Steve

8303. Question about AEA Isoloop 10-30 HF Ant.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-31 00:00:00 UTC
From: Andrew Farmer <andrew_farmer@bc.sympatico.ca>
Message-ID: <333F8301.3C85@bc.sympatico.ca>
Source record: 179006
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have the above AEA loop antenna and can't get the VSWR below 3:1 using the LC-2 loop controller. The antenna is mounted horizontally on a 3 foot metal mast which is attached to the end of a wooden 8 foot garden shed. The shed is approx. 7 feet from the side of a 2 story house. I was under the impression that this antenna was designed to be mounted in small spaces such as this and still work well and be able to get a VSWR below 2:1. I have taped both the controller cord and RG-58 coax to the mast as specified in the instuctions but this made no difference.
I am using a Kenwood TS-440SAT and have disabled the internal tuner.

Thanks,
Andrew, VE7AFX

Cross-posted to: alt.ham-radio.vhf-uhf,alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.commercial-lmr,rec.radio.swap

Can some one FAX me a page from the ICOM IC-H6 manual on placement of diodes in the matrix board vs. frequency, for the VHF band.

I have several radios but the diodes have all been cut from the boards.

If there is a formula for calculating the placement of the diodes that would work too.

Thank you for your consideration and help.

8315. WTB: inexpensive UHF transceiver WITHOUT cell.blocking

Newsgroup: rec.radio.amateur.equipment
Date: 1997-03-31 00:00:00 UTC
From: dwcomm@aol.com
Message-ID: <19970331005000.TAA27011@ladder01.news.aol.com>
Source record: 179036

I'm new to the Ham world, and so I'm trying to get started with some
inexpensive used equipment. What I'm interested in would be an older UHF
transceiver that was made before the Cellular blocking went into effect.
This can be an old tube type system that no-one wants anymore, or
something a bit newer.
Since I'm not too familliar with the different makes and models,
Please write back to me at dwcomm@juno.com and tell me what you have
for-sale.
I'm interested in UHF, 2 Meter VHF Mobile, and 6 Meter.
I do not want VHF Marine or HF-SSB, as I already have these.
Thanks, Dale
dwcomm@juno.com (not this AOL address please, too much junk spam-mail.)

Viset the Dale Wein Communications WEB page at,
http://home.aol.com/dwcomm
for the latest info on photo scanning & printing services.

>
> Peter - could you elaborate on this?
>

On quite a few occasions I had to do work outside when it was near zero (F,
not C).
I would keep the portable in my outside coat pocket and the radio got to be
quite
cold. Even with a fully charged NiMH battery, it was only a few minutes of
transmit
before I got a low battery alert, and usually the battery was useless in an
hour or so.

Motorola manuals state that NiMH batteries are not recommended for
operation in
extreme cold.

I have hade a similar experience. The radio is sound sensitive.

I find if I have the mike control ON and use the mike control

D 5 to turn off DTMF control it is less likely to respond to sounds.
Then when you need to contro something use D 6 to re-enable the keypad.

=TOM=

danny here

i bought a 204 about 2 weeks ago. (no, i did'nt pay full price for it. i am a recent former employee who took advantage of an extra employee appreciation discount) so far i like it. it has a few features which i have never had on my previous equipment. i used it in my car for about a week and a half and it worked very well. i also bought one of the lapel mike/earbud
units the shack just came out with and i absolutely love it.
as for some of the other comments i read, i'm not surprised the adi version is cheaper. the shack does not pretend to be a discount store. someone mentioned the difference in features,
wired cloning?? the 204 has on air cloning;no cables needed. auto power on?? why?? the way i
look at it, some people will not buy from the shack because the price is too high, and thats
ok. some people will buy from the shack because if they ever have a problem they have a local
human they can go to instead of a voice on the other end of the phone.(which as you know these
days more often turns out to be a computer until you can accurately maneuver through several
layers of menus).
one last note: i dont like the antenna(the adi version appears to have the same one, see march cq in the new products column). i will remedy this at the upcoming birminghamfest.
sorry if i got longwinded.

73 and see you later
danny / n4mrc

> 200 memories in non-alpha mode (versus 120 on RS HTX-204_
>
>In other words, More for Less at your Real Radio Dealer!
>
>
>73 to all!
>"Squeak" Porray, AD7K
>Manager, Amateur Electronic Supply/Las Vegas

danny again:

taking issue although i don't have my owners manual in front of me.

"Wired Cloning Feature" htx-204: has wireless (on air) cloning
"Auto Power On" htx-204: not that i'm aware of (also why?)
"Programmable VFO Range" htx-204: i don't think so(ok, you got me there)
"Battery Voltage Indicator" htx-204: no (ok, here too)
"DTMF (Touchtone [r]) Decode" htx-204: i believe mine has this. (will have to ckeck manual)
"200 memories in non-alpha mode (versus 120 on RS HTX-204" htx-204: 120 IN alpha mode

(lets compare apples to apples)

judge for yourselves. adi has i'm sure a few features that the 204 does not. so what? if you want that, please, buy the adi. just remember, 6 months from now if it needs repair some will go to the ups depot and some will go to the local "answer man" i do agree with one of the respondents wholeheartedly, buy it on sale!!!

thanks and 73
danny / n4mrc

First off this isn't an oscilloscope. Its an x-y monitor without a
calibrated timebase etc. If you are looking for an oscilloscope, this
isn't it. These were usually incorporated into oem equipment which
provided x and y axis scaling.

Try cleaning the TX/RX changeover relay that switches +8V from RX to TX.
If the PLL unlocking is intermittent, then the RX8V and / or the TX8V maybe
intermittent or low in value.
If that doesn't cure the unlocking then the VCO is next on the list and
probably needs to be replaced.

I think what you missed, was, in step two. The F/W button was already
pressed and the memory channel indicator was blinking.
Then in step 3, press the PTT button and then press the F/W button to
write a TX frequency to the chosen memory.
In any regard, you are doing exactly what the manual says to do.
